

October 19th 2004

Company Announcement Office Australian Stock Exchange Ltd (ASX) 4th Floor, 20 Bridge Street Sydney NSW 2000

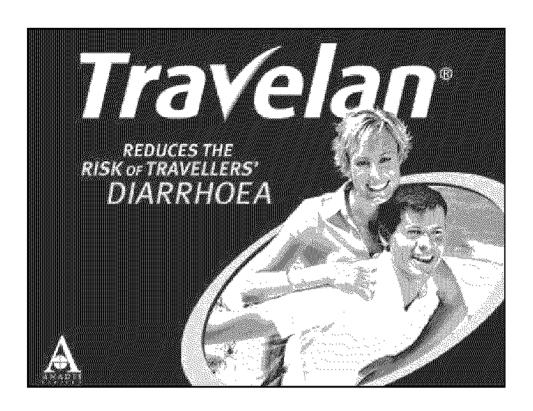

Dear Sir/Madam,

Please find herewith a company announcement "Travelan Presentation" for release and distribution to the market immediately.

On Behalf Of ANADIS LIMITED

CONOR GRAHAM

Managing Director & CEO

What is Travelan?

Travelan - a Clinically Proven,
Natural product - is the first Travellers
Diarrhoea (TD) preventative.

Specifically designed to prevent the binding of *E. coli* bacteria to the intestinal wall – inhibiting the bacteria from releasing toxins into the body, thereby causing diarrhoea.

Travelan

Travelan Advantages

- Travelan is a patented formulation and it works!
- Natural product not an antibiotic!
- •Unique niche product, no competition alternative products are only used <u>after</u> problems begin.
- •No cannibalization should not affect the sale of other products, should help increase sales.
- •Drive new customers into stores product is in demand from Pharmacies.
- •Well priced and profitable for retailers.

Travelan

Brief History

- The Travelan project began in 1993.
- •Travelan is specifically designed to reduce the risk of infection with Enterotoxigenic *E. coli* proven to be the major cause of TD.
- •Travelan has completed successful clinical trials in Europe and the US.
- •Trials have shown up to 90% protection against infection from the types of *E. coli* that cause TD.
- •Even the small portion of patients who were affected by *E. coli*, had significantly less severe symptoms than those not receiving Travelan.

Why is TD such as issue?

Travellers Diarrhoea is the number one health problem for international travelers in terms of frequency **and** economic impact.

Besides the usual discomfort and inconvenience, TD can be serious enough to warrant confinement to bed, or even hospitalisation.

Even mild TD can seriously affect the effectiveness of a business trip, or worse - your enjoyment of a well deserved holiday!

How does Travelan Work?

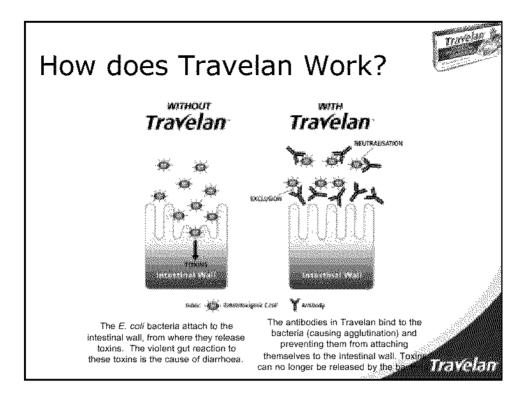

Through the use of natural protection mechanisms, Travelan uses the antibodies and anti-microbial properties from Colostrum, harvested from dairy cows, that have been hyper-immunized with a patented Anadis vaccine.

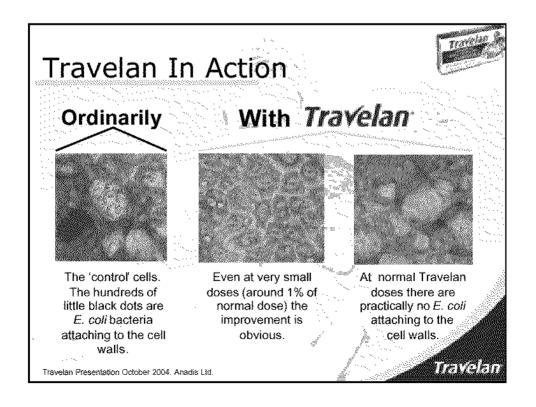

Antibodies, in very high numbers, are present in Colostrum. The Anadis vaccine ensures the cow produces larger amount of specific antibodies.

These antibodies, the active ingredient of Travelan, attach themselves to the antigen (E. coli), preventing the release of toxins into the body, which cause diarrhoea.

Travelan

How is Travelan taken?

Travelan is formulated into a caplet that is taken before each meal; extra caplets can be taken when additional protection is required (e.g. snacking, or in a particularly high risk area)

Travelan comes
blister packed in a
pack of 30 caplets,
this provides
approximately 10
days of protection

Devalar

What about safety?

Travelan is a natural preventative, prepared from Bovine Colostrum, with Natural Product credentials accepted by the Australian TGA – one of the most stringent drug regulatory bodies in the world.

All product claims are scientifically proven and in accordance with the TGA's guidelines of evidence for claims in complementary medicine.

The Bovine Colostrum is harvested from Australian dairy cows that are certified free from BSE ("Mad Cow" disease). Each batch is free of antibiotics and pasteurised to kill any pathogens.

Tva velan

What about safety?

Travelan contains milk proteins, lactose and glucose. The levels of lactose are very low, with the total daily dose, from Travelan, being well below that at which clinical signs of intolerance can be experienced. The level of glucose in each caplet is only 50mg.

Travelan is not recommended for children under 6 years of age, except on professional health advice.

Travelan

Travelan Production

Due to animal health regulations, initially only 1200 cows were hyper-immunised – no cow had an adverse reaction.

This enabled production of approximately 120,000 packets – for the initial launch into Victorian Pharmacies

The next immunisation and collection program (immunisation completed) will include over 2,400 cowsproviding sufficient bioactive material for approximately 350,000 packets for a national launch around March / April 2005.

Production will continue to expand to meet demand

Travelan Production **Estimated Travelan Production** •2004 - 06_{...} Australian market: begin move off-Millions shore... ·2007 - 08 International market .12 penetration, including parts of 10 Asia, Europe and US. 8 ·2009-2010 production could 6 expand beyond this with China having 30m+ Western visitors and growing internal travel. Estimated potentia 20m+ packets. 2006 2007 2008 2009 2010 li fa Malairi Travelan Presentation October 2004, Apartis Ltd.

Travelan Distribution

- Initial product launch and distribution is restricted to Victoria. This will begin early October 2004.
- •National launch is planned for March April 2005.
- •Travelan is distributed through the 3 major Pharmacy wholesalers: Mayne Health, Sigma and API (Australian Pharmaceutical Industries).
- •The wholesalers then on-sell the product to their own major pharmacy chains and smaller independent pharmacies.
