KEY MILESTONES THAT GOT US HERE...

- Sold 8000+ smartwatches test in market sales
- Raised \$5.5m over November & December 2015
- 24th March 2016 officially listed as ASX:IOT, first listed in IOT space – consumer tech in Australia.
- We are about to launch ROAM-e
- Range of 6 smartwatches launched
- Distribution deals signed in USA, Japan & Australia
- AEE production deal signed for ROAM-e

For personal use only

- Range of 6 smartwatches
- Innovative wearable devices
- Mass market pricing
- iOS & Android compatible

For personal use only

NEW PRODUCT PIPELINE

- Kids safety smartwatch – first 3G geo-fencing watch in the market
- Senior's safety smartwatch – Accelerometric fall detection feature
- Driver fatigue alert device – Retina scan feature
- Home automation product suite
- UCD – Universal Computing Device
- Holographic Systems
- Virtual Reality product range
- Augmented Reality product range

ROAM-e UNIQUE FEATURES

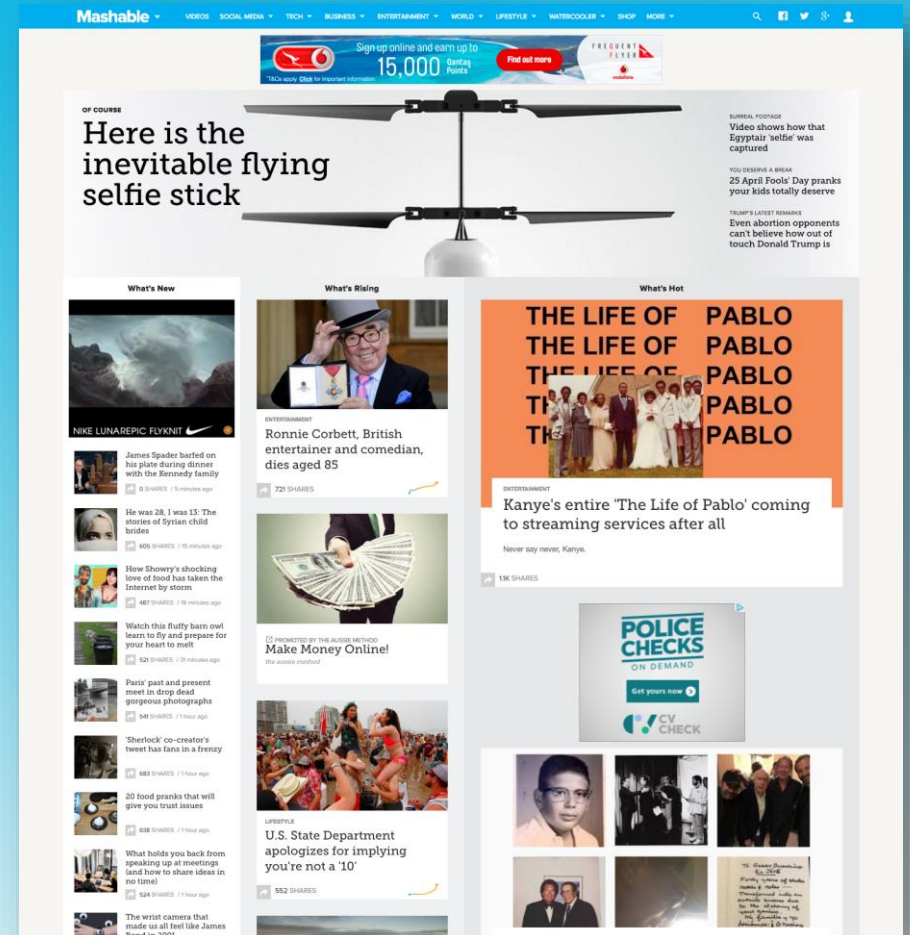

For personal use only

- Facial recognition
- Collapsible rotors
- Hot swap battery
- 1080p HD camera
- Expandable microSD card slot: Up to 64 GB
- Onboard GPS
- Uninterrupted 360° panoramic shot
- Object avoidance sensor

ROAM-e GLOBAL MEDIA COVERAGE

- Headlining on Mashable worldwide – biggest consumer online publication.

In a 24-hour period Google returned more than 140 articles in dozens of languages.

'Selfie stick on steroids!': Incredible camera FLIES around you while taking photos (and even recognises your face)

- Australian tech company IoT Group has invented the flying selfie stick
- The device combines drone technology with a camera and hovers in the air
- It allows you to take wider shots than what is possible with a selfie stick
- The device, called the ROAM-e, is simply chucked in the air to hover

In an age where a single selfie is enough to 'break the internet' an Australian company has taken self-portraits to the next level.

Tech company IoT Group has created the flying selfie stick – a drone-like device that users simply chuck in the air to take photos of themselves.

Once in the air the camera hovers around your face and uses face recognition technology to take photos, making Kim Kardashian West's selfies look amateurish by comparison.

La culture du selfie n'est pas prête de s'arrêter. Cette pratique narcissique, qui frise parfois l'absurde (la perche à selfie pour Mac Book) ou juste l'inconscience (se prendre en photo avec un pirate de l'air) repousse aussi chaque fois un peu plus les limites de la technologie. Pour preuve, l'incontournable stick à selfie se présente à nous sous un nouveau jour grâce aux Australiens de IoT Group. Ces derniers ont mis au point ROAM-e, un drone à peine plus grand qu'une bouteille de 50cl qui vous suit partout pour vous tirer le portrait. La bête embarque un APN de 5 mégapixels et vole jusqu'à 25m de haut. Le ROAM-e peut prendre des panoramas à 360° ou streamer une vidéo en live pendant 20 minutes. Interrogé par Mashable Australia, Ian Duffell, directeur général de IoT Group, a défini son bébé comme étant "une perche à selfie sous stéroïde". "Le vrai problème des perches à selfie est la longueur", a-t-il expliqué. Et d'ajouter : "L'idée était : 'laissons ce truc qui prend des photos voler à côté de vous'". Si avoir une caméra volante qui déja toutes vos

Australia's first listed internet of Things business The IoT Group started trading on the ASX following the successful reverse takeover of Ardent Resources Limited, with the company marking its debut with the launch of two new product lines.

The company is betting big on the ROAM-e, a drone designed to take selfies and stream live video, and a range of six new OK Smart Watches. The expanded product line builds on IOT's OK Viper Smart Watch product available through Coles supermarkets.

IOT's executive director business strategy, Ian Duffell, said the company's main focus was to target consumers who are interested in the internet of Things, but are priced out by expensive and platform-limited competitors.
