## **Fatfish Shares Commence Trading on the OTCQB Market**

### **Highlights**

- **The dual listing on the OTCQB has been completed and Fatfish shares have commenced trading on the OTCQB of the US OTC Market**
- **May potentially create greater demand and liquidity for Fatfish shares**
- **The OTCQB listing allows access to the North American investment market**

International tech venture builder Fatfish Internet Group Ltd ("Fatfish" or the "Company") is pleased to announce that the Company's shares have commenced trading on the OTCQB market. Allowing North American investors access to invest in Fatfish directly in a full regulatory compliant framework, the OTCQB dual listing may potentially create greater demand and liquidity for Fatfish shares.

The OTCQB is a US-based financial market operated by the OTC Markets Group in New York and it is the second highest tier of the U.S. OTC markets. As a decentralized market, securities such as Fatfish are traded directly by a network of dealers instead of providing an order matchmaking service like the New York Stock Exchange and the dual listing is non-dilutive to existing Fatfish shareholders.

Through the OTCQB listing, Fatfish aims to engage a far greater network of U.S. investors, data distributors and media partners, ensuring that North American investors have access to the same high-quality information and ease of trading that are available to investors in Australia, while ensuring full regulatory compliance to the U.S. securities framework.

Fatfish shares are now traded on OTCQB under the symbol FFTF.

Fatfish CEO Kin Wai Lau commented "We are very pleased that FFTF shares have commenced trading on the OTCQB. This dual listing is an important step in attracting further U.S. investment and increasing overall awareness for Fatfish amongst North American investors."
