

Tasmanian Government Provides \$2 million Grant for Upgrading Power Supply to the Dolphin Tungsten Mine

Group 6 Metals Limited (**ASX: G6M**, “**G6M**” or the “**Company**”) is pleased to advise that earlier today, the Tasmanian Government announced that it had provided a \$2 million grant to Hydro Tasmania for upgrading the capacity of the 11kv transmission line to the Dolphin Tungsten Mine on King Island, Tasmania.

With the redevelopment of the Dolphin Tungsten Mine having commenced, the associated crushers and processing plant requirements for power at the site will be greater than that which the current infrastructure can carry. The grant allows Hydro Tasmania to effect whatever upgrades and modifications are necessary to the power network to Grassy to provide the required level of power supply to the mine.

Without the transmission line upgrade, the Dolphin Tungsten Mine would have been solely reliant on diesel generators for its electrical energy, so the ability to connect to the King Island grid supply (which incorporates a high percentage of renewable energy) is a fantastic result from both a cost of energy and an environmental perspective.

Executive Chairman, Johann Jacobs advised “The Company is extremely grateful for both the direct and indirect support it has received from the Tasmanian Government in developing the historic Dolphin Tungsten Mine on King Island.”

Approved by the board of Group 6 Metals Limited.
