ASX Announcement

26 July 2023

ABN: 45 116 153 514

ASX: TMX

Smokebush "Phase 2" Drilling Completed & Project Update

Terrain Minerals Limited (ASX: TMX) ('Terrain' or the 'Company') is pleased to announce the Phase 2 reverse circulation (RC) drilling campaign has now been successfully completed at the Company's 100% owned Smokebush Project, located approximately 350 kilometres north of Perth, Western Australia.

Terrain successfully tested multiple IP anomalies previously identified at Monza, Hurley, Paradise City and Mirja as well as one other isolated IP targets will be tested, all concealed under cover. Additionally, Pegmatites near Monza and Hurley are also being tested for Lithium potential as part of the Phase 2 drilling program.

Phase 2 - Drilling Highlights (Gold & Lithium):

- Drilling was completed safely with no reported LTI or environmental incidents.
- **Twelve (12) RC holes** completed for **1,383 meters** in total.
- **Six (6) holes** targeting IP generated anomalies for Gold;
  - All six (6) holes successfully intercepted sulphides (pyrite) spatially related to the modelled geophysics.
  - One (1) pegmatite hole unexpectedly intersected sulphide (pyrite) in mafic volcanics.
- **Six (6) holes** targeting mapped pegmatite units for Lithium;
  - Five (5) holes intercepted zones between 10m to 20m wide (F/note 1).
  - No visual spodumene was seen in pulverised spoils, (assay's now pending results).
  - Unexpected pyrite zones will be assayed for gold and base metals.

Larin's Lane – Mobile Metal Ion (MMI) Soils:

- MMI extension program has commenced and is due to be completed in August.

Terrain is pleased to report the success of the latest drilling program which targeted six (6) induced polarisation (IP) chargeability anomalies defined under cover at depths ranging from 20m to 100m. All six (6) anomalies are now explained by the presence of sulphides (pyrite) within mafic units, which are known regionally to host gold mineralisation. The presence of sulphide minerals identified during the phase 2 drilling, combined with historical drilling results within 50m to 300m of this drilling is an indication that the Smokebush Project shows the hallmarks (at this early stage of exploration) of a gold-bearing system.

Caution: No direct relationship has been established between sulphide abundance and gold mineralisation in the area. However, Terrain is encouraged by the fact the IP anomalies are not related to lithologies that are known to be baron of gold, such as graphitic sediments or saline ground water aquifers. In addition, the findings from historic gold drilling intersections that are all within an interpreted 'Halo Zone' being around 50m to 300m from all IP targets (refer to historic gold drill intersection on page 3).

Terrain also tested six (6) pegmatites with intervals dominated by quartz and feldspar intersections between 10m to 20m wide, which is the same as observed and reported in Phase 1 of drilling (refer ASX announcement released on 6 June 2023). No visual spodumene was visually detected in the heavenly pulverised drill spoils. It is important to note only results from the now pending assay's will be able to determine the existence of lithium in drill samples.

Based on positive field observations all samples from the pegmatite drill program will be analysed for gold and base metals. Results from the Phase 2 program are expected to be received back in late August or early September 2023. The Company also notes that the Phase 1 drilling results remain outstanding. The market will continue to be updated accordingly.

Address: Suite 2, 28 Outram Street, West Perth WA 6005 **Postal:** PO Box 79, West Perth, WA 6872

Background information on gold mineralisation across Yalgoo Mineral Field, which includes gold mineralisation reported by Warriedar Resources Limited (ASX: WA8) (F/note 2) that was previously mined by Minjar Gold and reported a historic production grade averaging 3.3 g/t (F/note 3). These historic mines appear to be structurally controlled and related to north to northeast-trending shear zones and also having a relationship between gold mineralisation and the presence of sulphide minerals within the system. Warriedar Resources reported gold and sulphide association at its Windinne Well pit project (F/note 4). Four of Terrain's IP targets sit on the same orientated sheer zones and also have sulphides present as also seen in Terrain's previous drilling campaigns at the Monza and Paradise City prospects.

The current drilling campaign forms part of Terrains three stage exploration campaign with the aim of achieving a company-defining discovery in 2023. Terrain remains focused on creating additional and meaningful wealth for its shareholders over the short, medium and longer term.

Picture 1. Smokebush RC drilling near Hurley IP target.

Foot Notes (F/note):

4 - See Warriedar Resources (ASX: WA8) ASX announcement dated 9 March 2023.

Larin's Lane - Extension Program

Mobile Metal Ion (MMI) soils sampling

- Follow-up MMI soil sampling program testing the southern continuation of the currently 600m by 350m copper-in-soil geochemical anomaly has commenced (refer to diagram 5 & 7).
- Geology at Larin's Lane prospect interpreted as potentially part of same greenstone belt that hosts the Golden Grove Copper + Gold + Silver + Zinc + Lead Mine.
- Large new gold Anomaly ~700m by ~250m identified from the first program (refer to diagram 5 & 8).

Larin's Lane prospect, located in the southeast of the Smokebush Project and interpreted as an Archean greenstone unit, potentially part of the Yalgoo-Singleton greenstone belt, host of 29Metals (ASX: 29M) Golden Grove Copper + Gold + Silver + Zinc + Lead Mine (refer to diagram 1 & 5).

The initial MMI soil sampling over the northern part of the interpreted Archean greenstone unit at the Larin's Lane prospect successfully identified a large (~700 metre by ~250 metre) low level gold-in-soil geochemical anomaly plus a separate 600 metre by 350 metre copper and nickel-in-soil geochemical anomaly.

Encouraged by these promising results, the Company extended the soil sampling program over the southern extension of the Larin's Lane Gold and Copper Prospect on 28 June 2023 with the aim to close the anomalies to the southeast as both are still open in this direction.

Note: Refer to ASX release **16th May 2023** – Smokebush, New Gold & Copper/Ni Anomalies.

Historic Drill Results within the IP Survey Area

All of the newly identified IP survey targets have been defined at depths ranging from ~20m to ~100m undercover. The following historical gold intercepts are located between ~50m and ~ 300m from the IP targets.

Terrain's current theory is that the below gold intersections may be geologically related to the sulphide mineralisation associated with the IP anomalies (refer to diagrams 3 and 4 which highlights Terrain's historic drilling at Monza and its proximity to the newly identified IP anomaly).

Monza Historical RC drilling - Best Gold (Au) Results Include:

- **4m @ 4.46 g/t Au** (incl 1m at 10.3 g/t) from 51 metres SBRC003.
- **7m @ 2.72 g/t Au** (incl 1m at 11.1 g/t) from 25 metres and 1m at 0.85g/t from 43m SBRC005.
- **6m @ 2.12 g/t Au** (incl 1m at 7.2 g/t) from 80 metres SBRC011.
- **8m @ 1.37 g/t Au** from 85 metres and 2m at 0.8 g/t from 96m SBRC006.
- **2m @ 11.3g/t Au** from 70m MMRC162 – (not Terrain).
- **2m @ 9.2g/t Au** from 24m MMRC154 – (not Terrain).

Hurley & T17 areas:

- **10m @ 1.4g/t Au** from 15m MM084 - RAB (not Terrain).
- **2m @ 2.5g/t Au** from 51m MMRC074 - RC – (not Terrain).

Note: JORC information for MMI survey **12 October 2020** - Exciting Drilling Results at Smokebush Gold Project.

Paradise City Gold Prospect – Historic RC Drilling Results (not Terrain):

- **3m @ 2.17 g/t Au** from 10m PCRC001.
- **5m @ 1.35 g/t Au** from 13m PCRC002.
- **2m @ 3.61 g/t Au** from 15m PCRC007.
- **3m @ 1.94 g/t Au** from 19m PCRC008.

Note: JORC information for MMI survey **03 December 2020 -** New Application Granted with Exciting Historic Results at the Paradise City Gold Prospect - Smokebush Gold Project (In the release refer to Diagram 2 & Table 1 for Historic Significant Intercepts).

Picture 2. Smokebush RC Drilling at the Monza IP target.

Prospect	Easting (GDA94)	Northing (GDA94)	Dip (Degrees)	Azimuth	Actual Depth (metres)

Monza	499935	6773610	-60	180	213
Monza	500445	6773630	-60	180	84
Monza	500480	6773600	-60	270	84
Monza	500650	6773580	-60	180	54

Table 1: Summary of lithium-focussed drill holes of Phase 2 program at Smokebush Project.

Prospect	Easting (GDA94)	Northing (GDA94)	Dip (Degrees)	Azimuth	Actual Depth (metres)
Paradise City	501730	6772000	-60	270	102
Hurley	501960	6772300	-60	270	120
Monza	500490	6774000	-60	270	150
Monza	500480	6774400	-60	270	150
Mirja	499185	6774200	-60	270	120
Mirja	499250	6774200	-60	270	120

Table 2: Summary of gold and base metal-focussed drill holes of Phase 2 program at Smokebush Project.

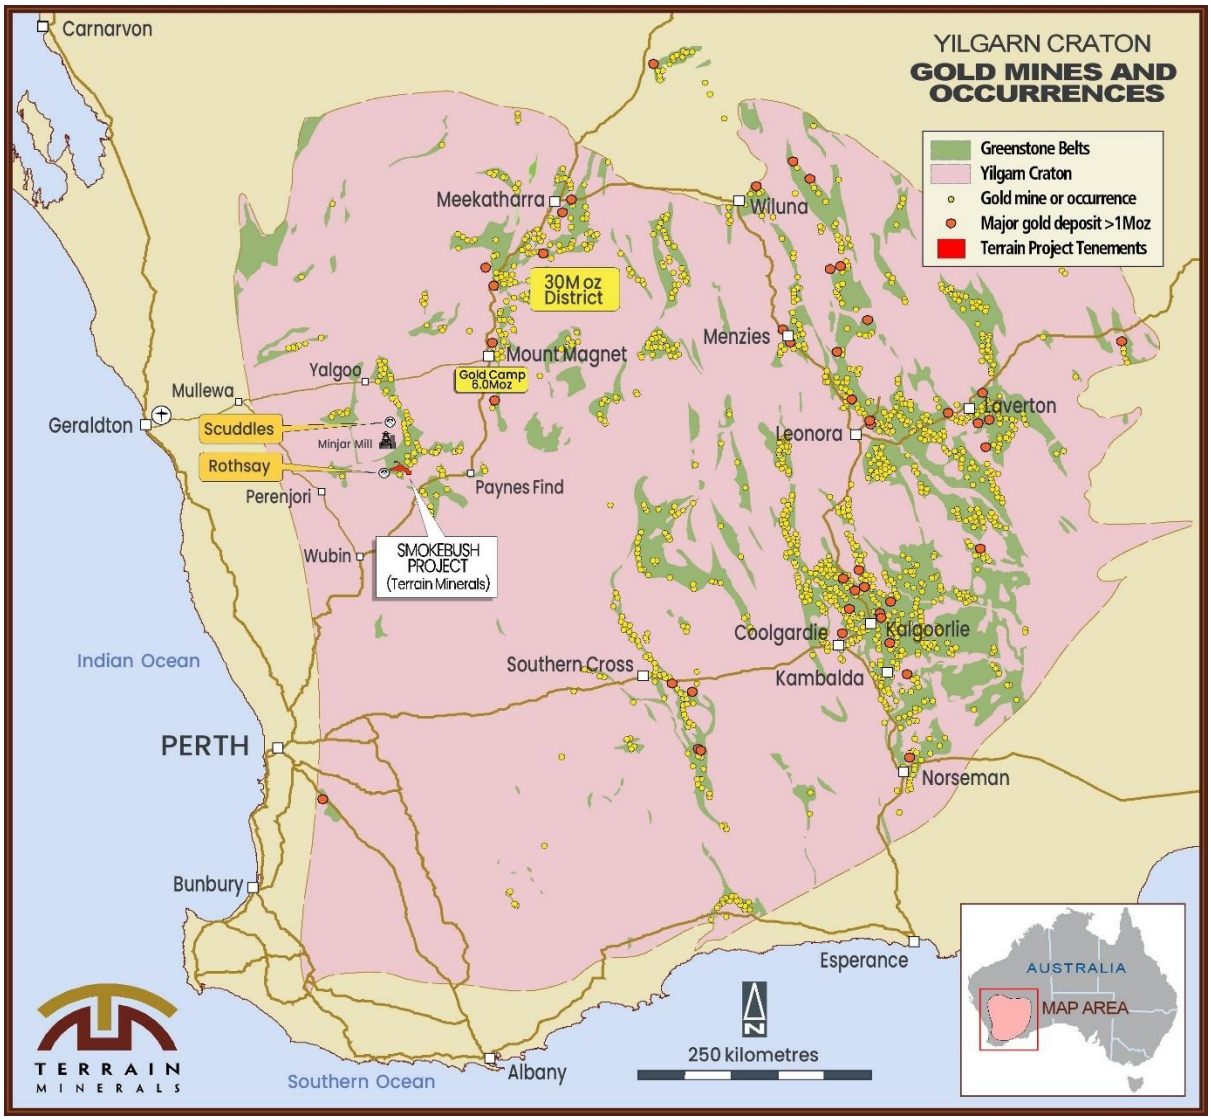

Diagram 1: Terrain Minerals' 100% owned Smokebush Gold and Lithium Project is located within the Yalgoo-Singleton Greenstone Belt in Western Australia.

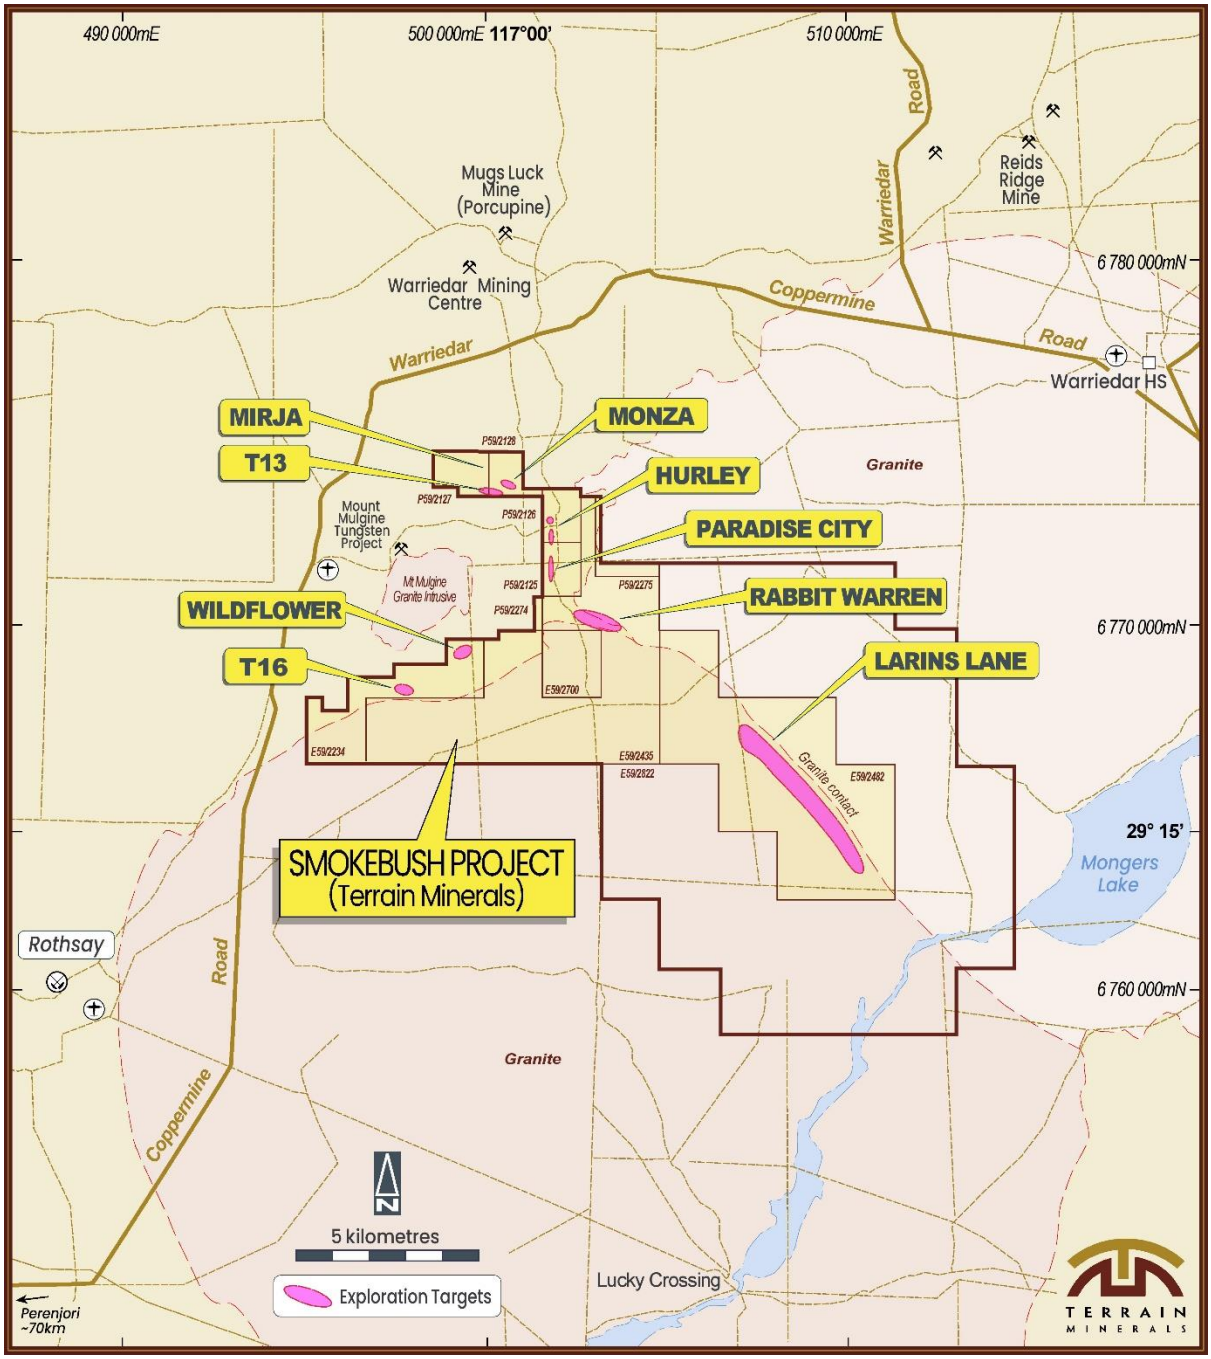

Diagram 2: Indicative location of the gold and lithium prospects within Terrain Mineral's 100% owned Smokebush tenement area.

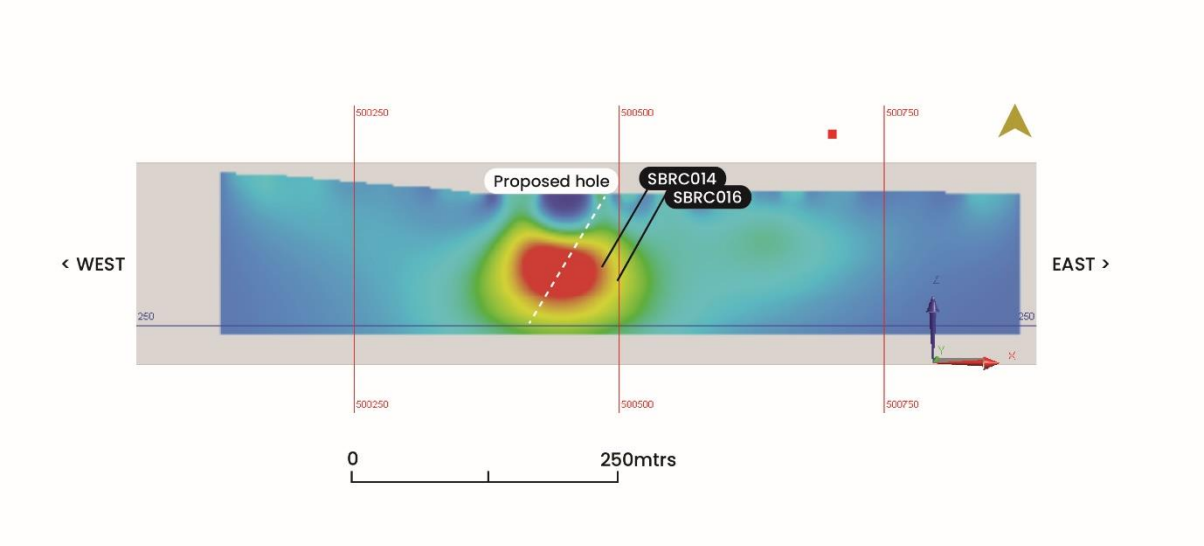

Diagram 3: Monza Gold Prospect: Two-dimensional (2D) inversion chargeability sections on 6774000N looking north with Terrain Minerals Limited's 2020/21 drill holes with superimposed (Refer to ASX announcement dated 22 May 2023 for JORC related data). The proposed drill hole designed to test this geophysical anomaly is shown (as a dashed line) and forms part of the Phase 2 reverse circulation (RC) now underway at the Smokebush Project (Refer to ASX announcement dated 22 May 2023 for JORC related data).

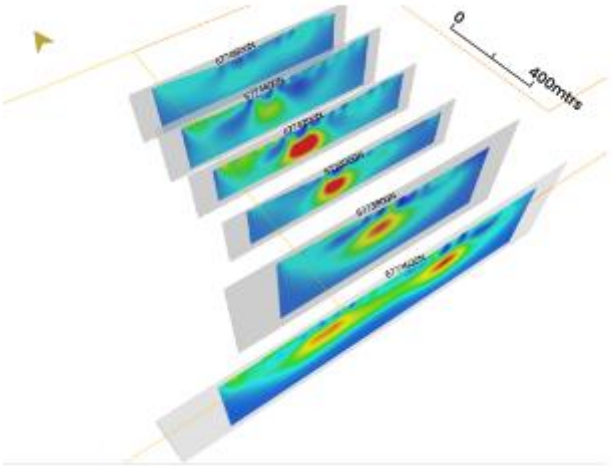

Diagram 4: Monza Gold Prospect: New identified 600m long chargeability anomaly identified parallel to historic Monza drilling (Refer to ASX announcement dated 22 May 2023 for JORC related data).

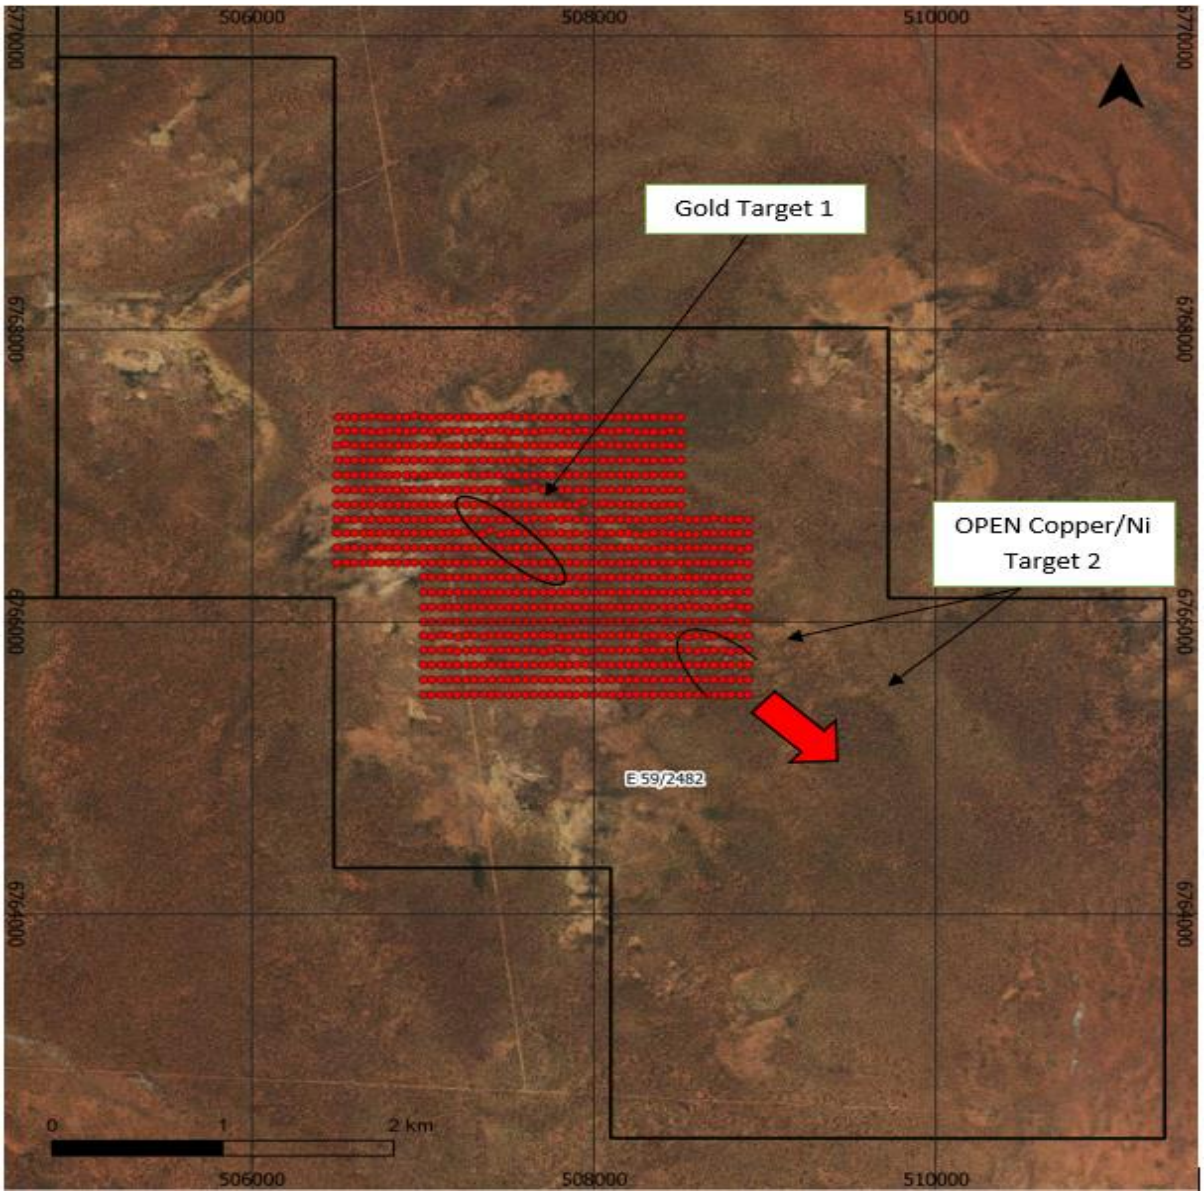

Diagram 5. Approximate locations of Target one (1) Gold Anomaly (refer to diagram 6) and Target two (2) an open Copper with associated Nickle "OPEN" anomaly. The red arrow indicating interpreted extension of the anomaly and approximate location of the new extension MMI sampling program which will cover and test a nine square kilometre area to define the boundaries of target two (2) (refer to diagram 7).

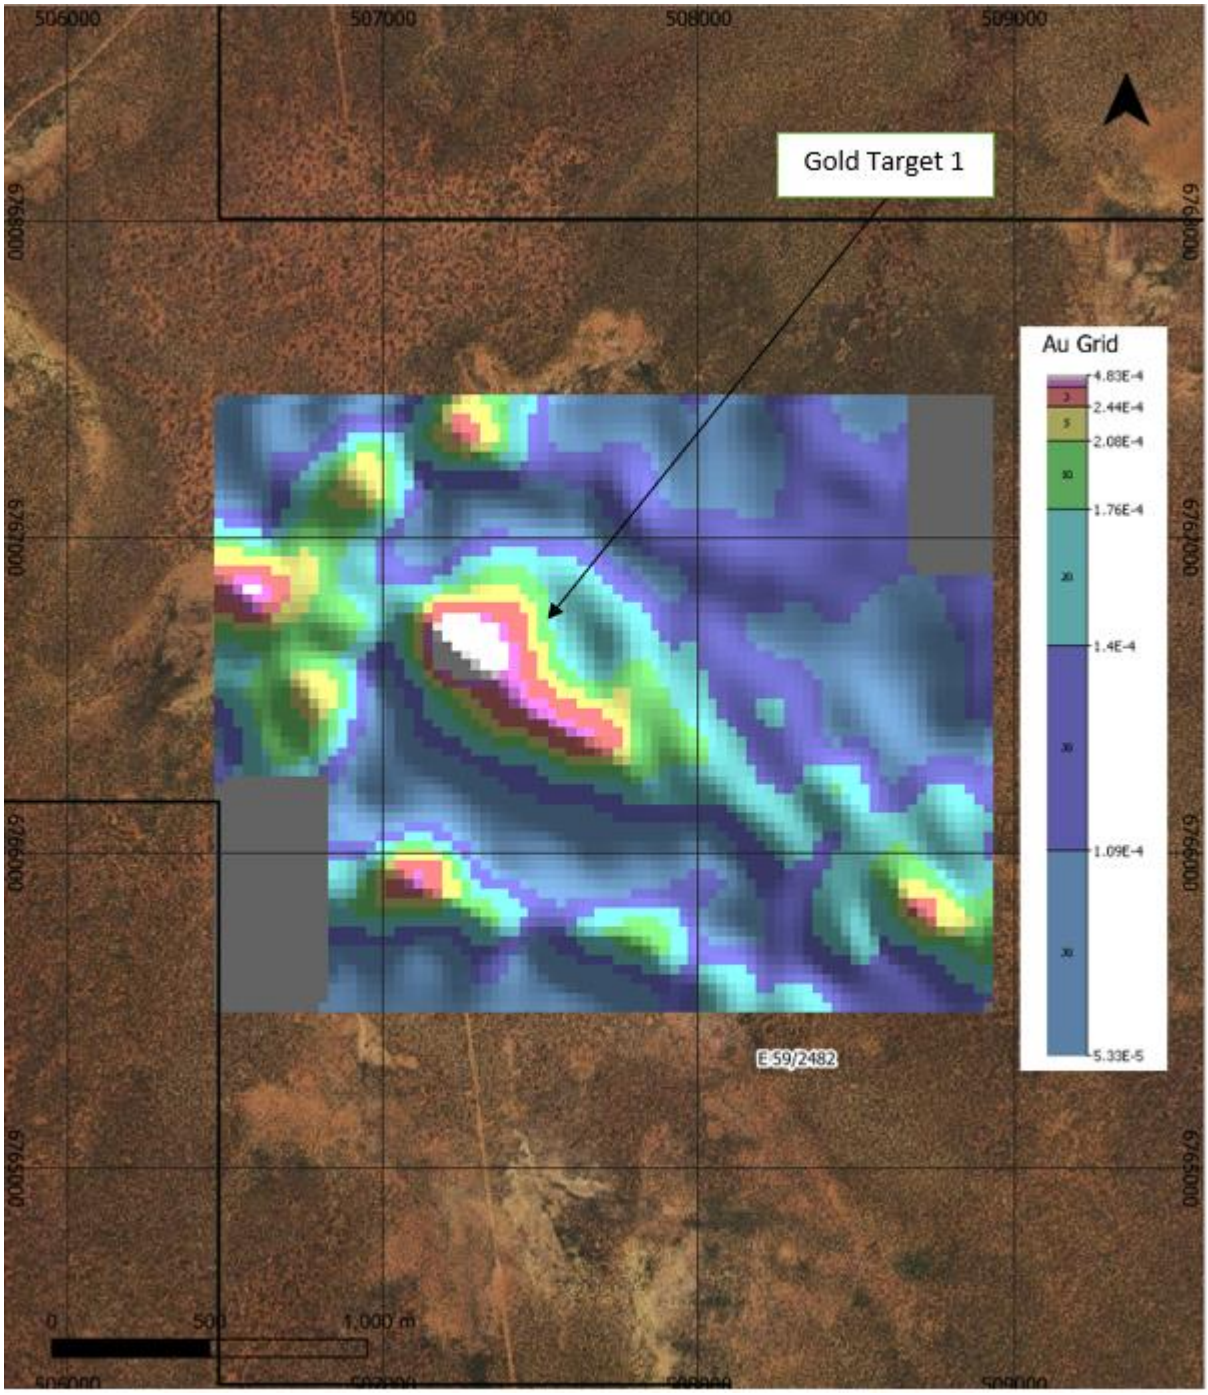

Diagram 6. MMI Gold anomaly/target circular 700m by 250m, (target 1) which is now ready for air core drill testing.

Target 1 - Anomalous gold values were detected in the central-northern portion of Minor, isolated anomalies can also be observed along the southwestern flank within the monzogranite domain. The north-eastern flank, which has been classified as a genetically different monzogranite compared to its southern counterpart, exhibits uniformly low Au values (refer to diagram 6 and 7).

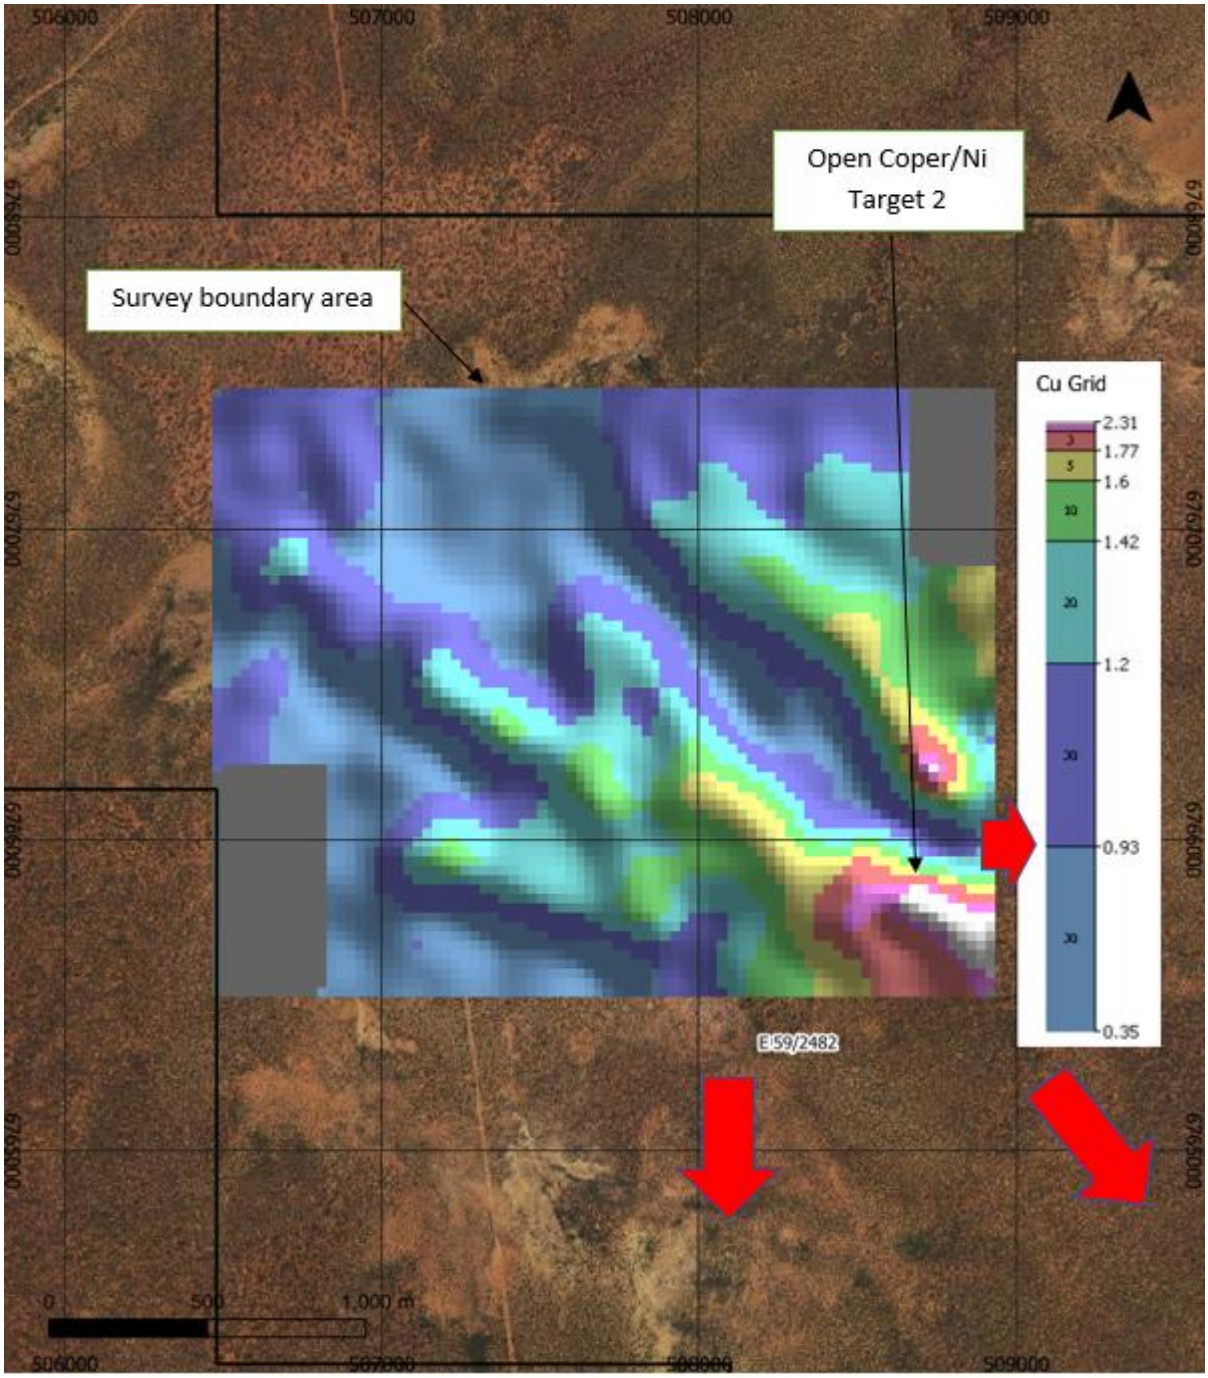

Diagram 7. Copper with associated nickel anomaly/target 2 (also refer to diagram 5). Red arrows are indicative for the MMI extension survey covers a 9km2 area, which aims to define the current open boundaries of target 2.

Target 2 - Copper target with Elevated Ni values (>0.3ppm) were observed in multiple isolated anomalies across the sampled area and the encompassing monzogranite. The generally low Ni values, and absence of any cohesive anomalous zones which are defined across multiple samples or correlation with associated pathfinders such as Cu indicates a low probability of any nickel mineralisation. There are also no discernible trends which discriminate Target 2 from the southern monzogranite, however, the boundary of the northern monzogranite can be accurately traced based upon a drop-off of Ni values (>0.2ppm). There is a distinct coherent Cu anomaly, in the southeast corner of the grid which is open to the south and east. This anomaly has an association with the observed nickel anomalism. The significance of this warrants testing with drilling.

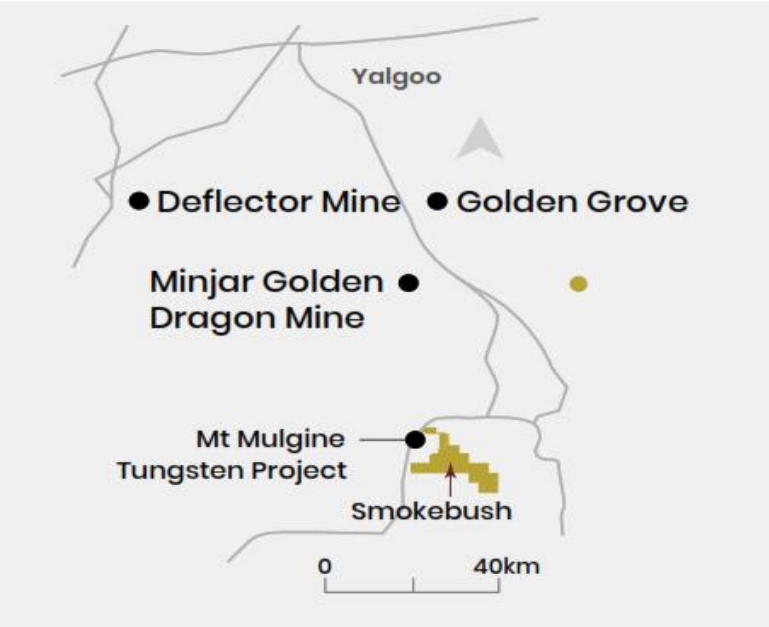

Diagram 5: Smokebush project location in relation to discoveries in the area.

Smokebush - Location & Access

The Smokebush Project area is located approximately ~350km from Perth Western Australia and 85 kilometres east northeast of the Perenjori township and 65 kilometres west of Payne's Find. Located within the Yalgoo Mineral Field. The tenements can be accessed via the unsealed Perenjori - Warriedar Road, and via extensive historical exploration grid lines, station tracks and fences lines.

The now 100% owned project consist of Prospecting Licenses (P59/2125, 2126, 2127, 2128 & 2774) and Exploration Licence E59/2234, 2435, 2482, 2700 & 2822 (refer to diagram 2).

The geology of the area consists predominantly of a complexly folded, regionally metamorphosed Archaean greenstone sequence at the southern end of the Yalgoo Singleton Greenstone Belt that has been subjected to multi-phase granitoid intrusion. Located adjacent to a large tungsten resource at Mt Mulgine (Tungsten Mining NL) and a number of historic gold open pit mines (Minjar Gold Pty Ltd).

Note: For additional information refer to ASX announcement:

News Highlight: Given the large number of promising exploration targets across its current flagship project 'Smokebush' and Terrains commitment to fully testing all targets in a rapid, methodically, and systemically manner, the Board anticipates exciting and regular news flow throughout the rest of 2023 and beyond.

ABOUT TERRAIN MINERALS LIMITED:

Terrain Minerals Limited (ASX: TMX) is a mineral exploration company with a Western Australian based asset portfolio consisting of:

Trade Opportunities: Terrain is always open to commercial discussions of full/partial sales and or JV of assets.

Lort River – WA Rare Earth Elements Exploration Project 100% owned. Covering 320km2 of highly prospective exploration acreage for REE within the now tightly held and emerging southern Esperance clay hosted REE province of Western Australia. Terrain is currently planning to execute a smaller proof of concept roadside (air core) drilling campaign before embarking on a larger wide spaced ~8,500m 1600m by 1600m, 60m deep air core program over tenement package. Heritage related matters are currently being addressed. Secondly: Bottom of hole samples will also be separately testing for Tropical style gold and Nova style base metal targets. The Company's Lort River Project immediately adjoins Meeka Metals Limited's (ASX: MEK) Cascade REE Project and OD6 Metals Limited's (ASX: OD6) Grass Patch REE Project.

Smokebush (SB): 100% owned gold and lithium exploration project located within the prospective Yalgoo Mineral Field of Western Australia. The Company's Smokebush Project neighbours Warriedar Resources Limited's (ASX: WA8) (formally Minjar, Golden Dragon Project), The Company's exploration campaigns are targeting both gold, lithium, and new Copper/Ni targets across the tenement package:

- **SB - Gold IP Survey** – IP survey program identified multiple drill targets, refer to the above release for further information.

- **SB - Lithium -** 20+ pegmatites identified, ranging up 20m wide and up to 200m long before appearing to go under cover. The pegmatite swarms run along a 4 km long zone between Hurley and Paradise City areas. Samples from the Paradise City Phase One (1) RC drilling program are now at the laboratory pending results. Pegmatites at Hurley and Monza are being tested as part of the Phase Two (2) drilling campaign, refer to the above announcement.

- **SB - Larin's Lane** – Exceptional MMI soil sampling results identifying a hidden Gold anomaly as well as an exciting 'open' Copper with associated Nickel anomaly, which remains open to the SE, an extension program is currently under way, refer to the above announcement.

Calytrix Project: 100% owned rare earth elements (REE) exploration project is located approximately 500 kilometres north of Perth and 40 kilometres southeast of the town of Yalgoo.

Wild Viper Project: 100% owned gold exploration project, located 70 kilometres north of Leonora, Western Australia, and incorporates the strategic land holding known as Wilsons Patch. The Company's Wild Viper Project is strategically located and surrounds Red5 Limited's (ASX; RED) Great Western Mine as well as being adjacent to Northern Star Resources Limited's (ASX: NST) Bundarra gold deposits. Terrain has successfully defended against another opportunistic SPL application on E37/1214 and will continue to defend its exploration rights.

Project Review: Terrain Minerals Limited continues to investigate potential projects across various commodities including gold, copper, nickel, rare earth elements, and other industrial minerals. Western Australian based projects are the Company's current focus, but other parts of Australia are being seriously examined and considered as are other jurisdictions like Africa, Europe, and the Americas.

Pending Applications: Terrain has several pending tenement (packages) applications across Western Australian and now Queensland. These applications include:

- **Biloela Copper & Gold Project** located along strike of the Cracow Gold Mine in Qld (ASX release 21 June 2023);
- **Carlindie Lithium Project** located near Lithium Power International's Tabba Tabba Lithium Project in the Pilbara WA;
- **Mukinbudin (WA) Rare Earths and Lithium Project** which neighbours Rio Tinto's landholding in the region.

The Company does not incur any holding or ongoing costs in relation to pending applications. It should be noted that there is no guarantee that pending application will be granted.

Authority
This announcement has been authorised for release by the Justin Virgin Director of Terrain Minerals Limited.

Competent Person's Statement
The information in this report that relates to Exploration Results are based on information compiled by Mr. Xavier Braud, who is a Member of the Australian Institute of Geoscientists and is a member of the board of Terrain Minerals Ltd. Mr Braud is a shareholder and options holder of Terrain Minerals Ltd. Mr Braud has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr. Braud consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

ASX Listing Rule 14.3
In accordance with ASX Listing Rule 14.3 and its Constitution, the Company advises that valid nominations for the position of director remain open throughout the year.

Compliance Statement
The Company notes that within the announcement, all the information is referenced directly to the relevant original ASX market releases of that technical data.

Terrain Minerals would like to confirm to readers that it is not aware of any new information or data that materially affects the information included in the relevant market announcement and, in the case of the estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed.

Disclaimer
Information included in this release constitutes forward looking statements. Often, but not always, forward looking statements can generally be identified by the use of forward-looking words such as "may", "will", "expect", "intend", "plan", "estimate", "anticipate", "continue" and "guidance" or other similar words, and may include, without limitation, statements regarding plans, strategies and objectives of management, anticipated production or construction commencement dates and expected costs or production outputs.

Forward looking statements inherently involve known and unknown risks, uncertainties and other factors that may cause the company's actual results, performance, and achievements to differ materially from any future results, performance or achievements. Relevant factors may include, but are not limited to, changes in commodity prices, foreign exchange fluctuations and general economic conditions, increased costs and demand for production inputs, the speculative nature of exploration and project development, including the risks of obtaining necessary licences and permits and diminishing quantities or grades of reserves, political and social risks, changes to the regulatory framework within which the company operates or may in the future operate environmental conditions including extreme weather conditions, staffing and litigation.

Forward looking statements are based on the company and its management's assumptions made in good faith relating to the financial, market, regulatory and other relevant environments that exist and effect the company's business operations in the future. Readers are cautioned not to place undue reliance on forward looking statements.

Forward looking statements are only current and relevant for the date of issue. Subject to any continuing obligations under applicable law or any relevant stock exchange listing rules, in providing this information the company does not undertake any obligation to publicly update or revise any of the forward-looking statements or advise of any change in events, conditions or circumstances on which such statement is based.

JORC Code, 2012 Edition – Table 1 report template

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	• *Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.* • *Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.* • *Aspects of the determination of mineralisation that are Material to the Public Report.* • *In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed*	• No drill sample assays have been reported in this release. • Reverse circulation (RC) drill samples were collected at one metre intervals for analysis. • No compositing of samples was undertaken. • Drill holes were located using handheld GPS. • Sampling was carried out using Terrain Minerals' protocols and QAQC procedures which follow recommended industry practice. • RC drilling was used to obtain one metre samples, collected through a cone splitter into buckets and placed in rows for geological logging. • One metre samples are taken directly from the cyclone for subsequent analysis consistent with current industry practice. • Sample quality was supervised with any sample loss or moisture noted. • Samples are submitted to Company's preferred (and independently certified) laboratory in Perth, Western Australia where they will be dried (ALS code DRY-21), crushed (ALS code CRU-32) and pulverised (ALS code PUL-21) before being analysed using ME-MS89L (for lithium) and Au-AA24 (for gold). • Lithium analysis: Sodium peroxide fusion with ICP-MS (ALS code ME-MS89L) which, according to the laboratory, enables complete analysis of samples with resistant minerals. This fusion method of analysis is ideal when lithium is required [or for samples that contain a significant proportion of sulphides (> 4%)]. See Fusion decomposition (alsglobal.com) for more details on sodium peroxide fusion with ICP-MS analysis being used by the Company to analyse the samples referred to in this release. • Given the gold endowment of the Yalgoo-Singleton Greenstone Belt within which this drilling was undertaken, all drill samples are also being analysed for gold using fire assaying, which is considered appropriate for gold analysis.

Criteria	JORC Code explanation	Commentary
	information.	• Gold analysis: Fire assay with ICP-AES finish of 30-gram samples aliquots (ALS code PGM-ICP23). See Gold by fire assay (alsglobal.com) and Platinum group elements (alsglobal.com) for more details the fire assay analysis being used by the Company on these samples. In addition to gold, PGM-ICP23 will also report platinum, palladium and silver. • Rare earth element (REE) analysis: In addition to lithium, analysis method ME-MS89L, which uses fusion decomposition for analysis (see the notes above), also analysis for a suite of rare earth elements including the light rare earth elements of Lanthanum, Cerium, Praseodymium, Neodymium and Samarium and the heavy rare earths elements Europium, Gadolinium, Terbium, Dysprosium, Holmium, Erbium, Thulium, Ytterbium, Lutetium and Yttrium. Analysis method ME-MS89L also analysis for, amongst other things, Niobium and Tantalum. The Company may also utilise lithium borate fusion with ICP-MS analysis ALS code ME-MS81h) should ore grade REE assays be returned from the initial ME-MS89L analysis (noting that ME-MS81h does not analyse for lithium given that lithium is the flux). • Base metal analysis: As noted above, sample analysis method ME-MS89L (which the Company uses to assay for lithium) uses fusion decomposition. ME-MS89L uses sodium peroxide as the oxidizing flux, which is also suggested method for base metal analysis given it enables full recovery of these metals from a given sample. As such, the Company will be analysing the samples referred to in this release for a range of base metals including, but limited to, Copper, Nickel, Lead, Zinc, Tin, Tungsten and Cobalt. The Company may also utilise four acid digestion method (ALS code ME-MS61) in addition to (or instead of ME-MS89L) during its exploration drilling programs when a lower detection limit or a different suite of trace-elements is required.
Drilling techniques	• *Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).*	• The type of drilling used for this program was reverse circulation (RC) • The drilling contractor was Challenge Drilling, using a standard RC rod string and hammer.

Criteria	JORC Code explanation	Commentary
Drill sample recovery	• *Method of recording and assessing core and chip sample recoveries and results assessed.* • *Measures taken to maximise sample recovery and ensure representative nature of the samples.* • *Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.*	• Sample recoveries were visually estimated. • The drill cyclone was cleaned between rod changes and at the end of each hole in the effort to minimise the risk of contamination. • Assays have not yet been received or reported.
Logging	• *Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.* • *Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.* • *The total length and percentage of the relevant intersections logged.*	• All holes were logged geologically by Company geologists using Terrain Minerals' logging codes. • Logging is both qualitative and quantitative by nature, and often includes lithology, mineralogy, mineralisation, weathering and colour. • All drill holes were logged in full. • In relation to any disclosure of, or reference to, interpreted visual mineralisation, the Company cautions that visual estimates of mineral abundance should never be considered a proxy or substitute for laboratory analysis. Laboratory assay results are required to determine the widths and grade of the visual mineralization (if reported) in preliminary geological logging. The Company will update the market when laboratory analytical results become available.
Sub-sampling techniques and sample preparation	• *If core, whether cut or sawn and whether quarter, half or all core taken.* • *If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.* • *For all sample types, the nature, quality and appropriateness of the sample preparation technique.* • *Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.* • *Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.* • *Whether sample sizes are appropriate to the grain size of the material being*	• No drill sample assays have been reported in this release.

Criteria	JORC Code explanation	Commentary
	sampled.	
Quality of assay data and laboratory tests	• *The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.* • *For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.* • *Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.*	• No drill sample assays have been reported in this release.
Verification of sampling and assaying	• *The verification of significant intersections by either independent or alternative company personnel.* • *The use of twinned holes.* • *Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.* • *Discuss any adjustment to assay data.*	• No drill sample assays have been reported in this release.
Location of data points	• *Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.* • *Specification of the grid system used.* • *Quality and adequacy of topographic control.*	• Drill collar locations were surveyed using handheld GPS, which is considered to be accurate to within +/- 5 metres. • Map coordinates are recorded in MGA Zone 50 GDA94
Data spacing and distribution	• *Data spacing for reporting of Exploration Results.* • *Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve*	• Drill spacing is suitable for reporting of exploration results. • Drill spacing is not suitable for Mineral Resource estimation.

Criteria	JORC Code explanation	Commentary
	estimation procedure(s) and classifications applied. • *Whether sample compositing has been applied.*	
Orientation of data in relation to geological structure	• *Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.* • *If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.*	• Drill planning was undertaken at an interpreted perpendicular angle to the targeted lithological unit. The interpretation of the geological units orientation is succespible to change as the company gains more information from drilling • At the current state of geological interpretation, sampling is regarded to be unbiased with respect to the orientation of the lithologies.
Sample security	• *The measures taken to ensure sample security.*	• Samples are given individual sample numbers for tracking. • The sample chain of custody is overseen by the Company's Head of Exploration. • Samples are transported in sealed bags to the Company's preferred (and independently certified) laboratory in Perth, Western Australia
Audits or reviews	• *The results of any audits or reviews of sampling techniques and data.*	• No drill sample assays are reported in this release. • The sampling techniques and analytical data are monitored by the Company's geologists. • External audits of the data have not been completed.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	• *Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.* • *The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.*	• The exploration results referenced in this release are from the Western Australian tenements of E 59/2435, P 59/2125 and P 59/2126, P 59/2127 and P 59/2128 located approximately 350 kilometres north of Perth. • These tenements are 100% held and operated by Terrain Minerals Limited. • There are no known material issues with third parties in relation to these tenements. • The tenements are in good standing with no known impediments to exploration. Exploration done by other parties	• *Acknowledgment and appraisal of exploration by other parties.*	• Significant historic work has been completed over the tenements in question, including drilling, geophysical surveys and surface sampling. • Previous operators of the tenement areas include; Westfield Minerals (1965), Minefields Exploration (1970-1982), ANZECO (1970-1982), Golconda (1983), General Gold Resources NL (1991-1993), Renison Goldfields Consolidated (1993-1996), Normandy Exploration (1997-1999), Gindalbie Gold NL (1999-2006), Vital Metals Ltd (2005-2009), Minjar Gold Pty Ltd. (1999-2017), Hazelwood Resources Ltd. (2010-2015), and Tungsten Mining NL (2015-2017). • Terrain Minerals Limited has no reason to question the quality or results of the exploration activities undertaken by previous holders of these tenements.

Criteria	JORC Code explanation	Commentary
Geology	• *Deposit type, geological setting and style of mineralisation.*	• The Smokebush Project covers a region in the Yalgoo-Singleton Greenstone Belt comprising supracrustal greenstone rocks, including mafic and felsic volcanic rocks, banded iron formation (BIF) and clastic sedimentary rocks. • Mineralisation style is Archaean orogenic gold type and potential lithium-caesium-tantalum (LCT) pegmatite-hosted lithium.

Drill hole Information	• *A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:*
	  ○ *easting and northing of the drill hole collar*
	  ○ *elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar*
	  ○ *dip and azimuth of the hole*
	  ○ *down hole length and interception depth*
	  ○ *hole length.*
	• *If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.*
		• See tables within the main body of this release.

Data aggregation methods	• *In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.* • *Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.* • *The assumptions used for any reporting of metal equivalent values should be clearly stated.*	• No drill sample assay results have been reported in this release.

Criteria	JORC Code explanation	Commentary
Relationship between mineralisation widths and intercept lengths	• *These relationships are particularly important in the reporting of Exploration Results.* • *If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.* • *If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').*	• The orientation / geometry of mineralization is unknown. • No drill sample assay results have been reported in this release.
Diagrams	• *Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.*	• The appropriate exploration maps and sections have been included within the main body of this release.
Balanced reporting	• *Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.*	• No drill sample assay results have been reported in this release.
Other substantive exploration data	• *Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.*	• All the relevant data has been included in this release. • Assays are pending.
Further work	• *The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).* • *Diagrams clearly*	• Further work is discussed within the main body of this release.

Criteria	JORC Code explanation	Commentary
	highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.
