Notes:

- EBITDAFX and NPATFX excludes unrealised currency revaluations relating to non-cash mark-to-market adjustments on Redox's open forward exchange contracts at period end. These amounts arise as Redox does not qualify for hedge accounting treatment under the terms of AASB 9 Financial Instruments and so is required to include the non-cash gain or loss on open foreign exchange positions at period end within its statutory result. Redox does not consider these amounts to form part of the Group's "underlying" earnings, and accordingly presents EBITDAFX and NPATFX metrics which exclude the impacts of these balances. Pre-tax pro forma adjustments have been included within the numbers to ensure comparability with the Group's ASX listing Prospectus. Adjustments included within both pro forma EBITDAFX and pro forma NPATFX are the addition in FY23 of \$1.7m of incremental costs associated with operating as a listed company (Prospectus: \$1.7m, FY22: \$1.4m), and the deduction of \$2.1m of one-off ASX listing costs (Prospectus: \$1.1m, FY22: \$1.5m). Pro forma NPATFX includes an additional pro forma interest add back before tax of \$11.6m (Prospectus: \$9.5m, 2022: \$5.7m) to reflect the Group's post listing debt structure. A P&L has been included in the Supplementary Information section of this presentation which sets out the impacts of these adjustments within the P&L.
- Pro forma NPATFX was not specifically disclosed in the Group's Prospectus. A reconciliation of pro forma NPATFX to NPAT is included in the Supplementary Information section of this presentation.

Operating margins

For personal use only

- Operating margins up vs Prospectus but down vs pcp due to gross margin decline
- ROIC² stronger than Prospectus due to working capital unwind

Notes:

1. Pro forma EBITFX can be calculated by adding the Group's annual depreciation cost to pro forma EBITDAFX.
2. Return on Invested Capital ("ROIC") is defined as net operating profit after tax (NOPAT), divided by average invested capital (total equity plus net debt including other financial assets and lease liabilities). Pro forma adjustments to NOPAT in order to derive a pro forma NPAT for the calculation are the exclusion of unrealised currency revaluation losses, the exclusion of one-off ASX listing costs, and the addition of a pro forma adjustment to incorporate additional costs associated with operating as a listed company.
