ASX ANNOUNCEMENT

Two new contracts for digital asset management and 3D printing

333D Limited (ASX: T3D) (**333D** or the **Company**), a company specialising in the creation and management of digital assets, is pleased to announce that it has entered into a services agreement with each of Next Healthcare Pty Ltd (**Next Healthcare**) and Cloud Strike Pty Ltd t/a Align Radiology (**Align Radiology**). Pursuant to these agreements, the Company will utilise its core expertise in digital capture, digital creation, artificial intelligence and 3D printing, in order to provide ongoing digital asset management and 3D printing services to those entities.

Services agreement with Next Healthcare

Next Healthcare is a company that partners with healthcare providers (including radiology clinics, dentists and chiropractors), to provide them with a turnkey solution that encompasses a wide range of services, including radiology reporting, financial modelling, equipment, training, administrative and billing support, as well as accreditation and government credentialing. Next Healthcare's service offering to its healthcare provider clients is Medicare billed. Next Healthcare is a company controlled by 333D Chairman John Conidi.

Under this agreement, the Company will provide the following services to Next Healthcare:

- Software development services - 333D will, utilising its digital expertise, develop software capable of automating aspects of the digital capture of Next Healthcare's subject matter, including creation of data files incorporating Next's data (currently in DICOM format), and utilising artificial intelligence to generate digital assets that are capable of being viewable in a 3D format or capable of being printed on a 3D printer. These software development services will be billed by 333D on a fixed pricing basis.
- Digital asset management services – 333D will manage Next Healthcare's digital assets (in the form of radiology data), in exchange for payment to 333D of a monthly licence fee based on volume of transactions (processing of patient studies) managed and processed by 333D.
- 3D printing services – 333D will also provide 3D printing services to Next Healthcare, where Next Healthcare has a requirement for printing 3D models of medical images or other diagnostic or radiology data. These 3D printing services will be charged by the Company on a pay-per-use basis.

Services agreement with Align Radiology

Align Radiology operates in a similar space to Next Healthcare, and partners with radiology clinics to provide them with a turnkey solution which includes Medicare funded diagnostic imaging reporting and associated services.

333D Limited

ABN 24 118 159 881

Level 23, Rialto South Tower,
525 Collins Street,
Melbourne VIC 3000 Australia

For personal use only

Similar to the Next Healthcare services agreement, the Company will, under the Align Radiology agreement, provide software development services, digital asset management services and 3D printing services to Align Radiology, under a similar fee and payment structure.

The services agreements will continue on an ongoing basis until terminated by either party with 3 months' written notice or for cause. The agreements contain warranties and representations which are customary for services agreements of that nature.

333D Director, Dr Nigel Finch commented,

"We are pleased to have formalised our partnership arrangements with Next Healthcare and Align Radiology. As shareholders know, we are continually assessing opportunities to monetise and commercialise our core expertise in digital asset creation and management and 3D printing, as well as to diversify and expand our revenue streams within the parameters of our business model. These service agreements will enable us to achieve both objectives. With our commodity licence agreement with AFL having reached its natural expiry in late 2023¹, we are now well placed to focus our resources on delivering under these services agreements. Whilst it is too early to predict the financial impact of these services agreements, the recurring licence fee revenues that we expect to be generated under these agreements will facilitate our cash flow management."

- END -

The release of this announcement was **authorised by the Board of Directors** of the Company.

About 333D Limited

333D Limited is a company that seeks to capitalise upon opportunities in the digital line of business as new technologies are developed from both digital capture and digital creation perspectives, that will lend themselves for use in a myriad of interfaces, both physical (3D printed) and/or across other or additional digital platforms. 333D specialises in the digital capture of a subject matter; digital creation of data files incorporating diagnostic or medical imaging in DICOM format, 2D, 3D and animated digital content including still photography, digital design and motion video; and encoding data files using artificial intelligence such that a digitally created file is generated that is viewable in a 3D format and capable of being printed by a 3D printer. 333D Limited also provides bespoke design and management of digital assets (including 3D print files) and bespoke 3D printing bureau services.
