| Attaching options | 30,000,000 options each exercisa pro-rata to the noteholders on 26 | | expiring 31 December 2027 issued |
| | An additional 4,000,000 options of were issued on 26 April 2024. | on the same terms as par | rt of their Lead Manager mandate |

Note 8. Borrowings (continued)

Accounting policy for borrowings

Initial recognition and measurement

At inception, the convertible note instrument is bifurcated into two components: the host debt liability and the embedded derivative conversion option.

- Embedded derivative conversion option: The fair value of the embedded derivative conversion option is determined at inception using an appropriate valuation model (e.g., Monte-Carlo simulation-based valuation methodology). This fair value is recognised as a financial liability.
- Host debt liability: The residual amount, after deducting the fair value of the embedded derivative conversion option from the total proceeds received, is assigned to the host debt liability. The host debt liability is initially recognised at fair value, which is typically the residual amount.

Subsequent measurement

- Embedded derivative conversion option: The embedded derivative conversion option is subsequently measured at fair
 value at each reporting date. Changes in the fair value are recognised in profit or loss.
- Host debt liability: The host debt liability is subsequently measured at amortised cost using the effective interest method. Interest expense is recognised in profit or loss over the term of the convertible note.

Derecognition

The convertible note instrument is derecognised when the obligation is discharged, cancelled, or expires. Upon conversion, the carrying amount of the host debt liability and the fair value of the embedded derivative conversion option are reclassified to equity.

Note 9. Issued capital
