

Amendment to Investor Presentation September 2024

Sayona Mining Limited ("Sayona" or "Company") (ASX:SYA; OTCQB:SYAXF) refers to the "Investor Presentation – North American Operations" lodged with the ASX on 18 September 2024 ("Investor Presentation").

The Company has made the following amendment to the Investor Presentation:

• Slide 28: the reference to "113ktpa or 50% NAL production" has been amended to read "The greater of 113ktpa or 50% NAL production".

A revised version of the Investor Presentation is attached to this release.

The Company confirms that no other amendments have been made to the Investor Presentation.

Issued on behalf of the Board.

About Sayona Mining

Sayona Mining Limited is a North American lithium producer (ASX:SYA; OTCQB:SYAXF), with projects in Québec, Canada and Western Australia.

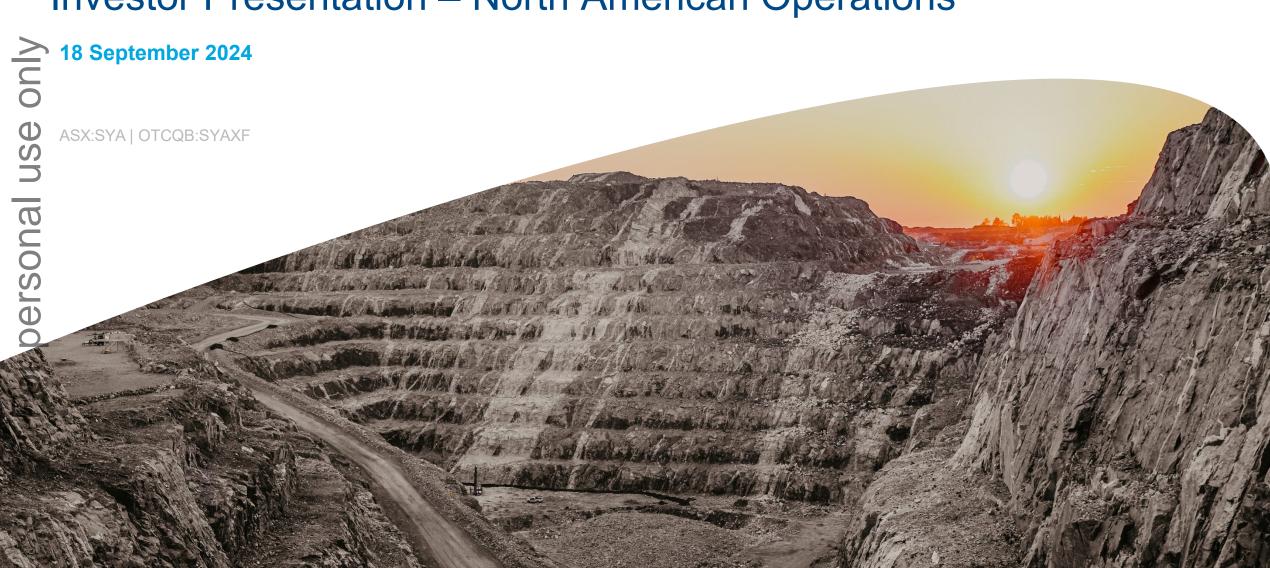

In Québec, Sayona's assets comprise North American Lithium together with the Authier Lithium Project and the Tansim Lithium Project, supported by a strategic partnership with American lithium developer Piedmont Lithium Inc. Sayona also holds a 60% stake in the Moblan Lithium Project in northern Québec.

In Western Australia, the Company holds a large tenement portfolio in the Pilbara region prospective for gold and lithium. Sayona is exploring for Hemi style gold targets in the world class Pilbara region, while its lithium projects include Companyowned leases and those subject to a joint venture with Morella Corporation.

JORC Resource 190 -210 kt

FY25 Planned Production¹

Infrastructure

- Open pit
- Processing plant
- ROM ore pad
- Waste stockpile
- · Conventional tailings facility
- Overburden stockpile
- Administration facility, including offices and personnel changing area (dry)
- Workshop, tyre change, warehouse and storage areas
- Fuel, lube and oil storage facility
- Reticulated services, including power, lighting and communications, raw water and clean water for fire protection, sewage collection, treatment and disposal

Mine Operations

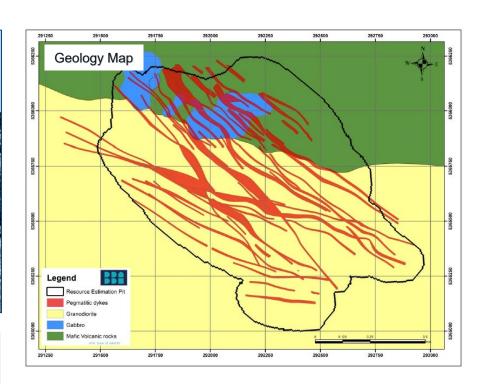

NAL | Geology Overview

Key Highlights: Mineralisation

- •Spodumene-bearing dykes: 109 spodumene-bearing dykes identified on the property.
- •Extent of exposure: Surface exposures traced over 700 m along strike and nearly 70 m vertically down pit walls.
- •Dyke characteristics:
 - Widths range from 10 cm to 90 m, extending several hundred meters in length.
 - Most dykes over 3 m wide are spodumene-bearing.
- •Spodumene presence: Variable occurrences within the dykes, displaying faint greenish shades and sometimes 1-10 centimeters large crystal clusters.

NAL | Evolution

Previous Practices

2011-2013 & 2017-2019

- · High dilution +25%
- Mining contractor management (Bulk vs Selective Mining)
- · Geological in-pit management
- · Material segregation for continuous feed to the mill

Sayona approach

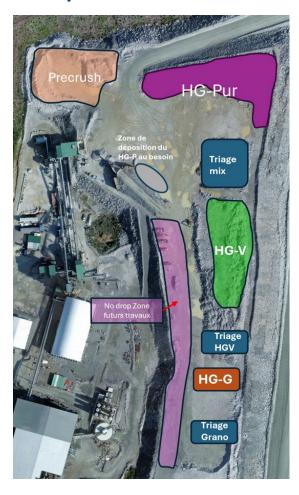

2023 - Today

- · 2024 dilution 11.7%
- · Mining contractor management
 - Geological training
 - · Each operator required undertake induction / training
 - Selective Mining
- · Geological In pit management
 - Presence of technician & Geologist 7d/7d 24h/24h
- · Material segregation for continuous feed to the mill
 - · 6 type of Ore feed
- Use of technology for better traceability
 - · Consolidated production metrics in PowerBI
 - · MineBook Mining Metrics
 - . Lidar + RTK Drone Surveys
 - · Paradygm Blast timing
 - · GeoticLog Blast hole data base
 - · Deswik MineSight for mine design and planning

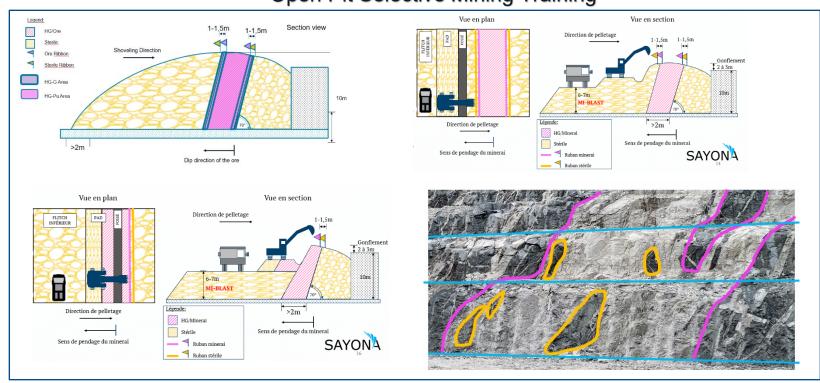

NAL | Focus Areas

Open Pit Selective Mining Training

NAL | Focus Areas

Legacy of the 50's – Underground Stopes

1950's – Historical underground workings

- · 21 underground stopes, drifts, ore passes and ventilation rises
- Located in Phases 2 and 3
- · Mining of these areas will be complete in 3 years
- · Already factored into operating costs

Sayona action plan

- · Operation SOPS developed in collaboration with Canadian Malartic
- · Experts in Rock Mechanics and Geotech highly involved
- Continuous drilling + 3D scanning for underground mapping
- Day-to-day assessment in the field
- Intense worker training
- · This is not uncommon in the historical gold mining region of Abitibi

Processing Plant

Design Change / Equipment

Flowsheet

Additions or modifications since previous operations:

Crushers

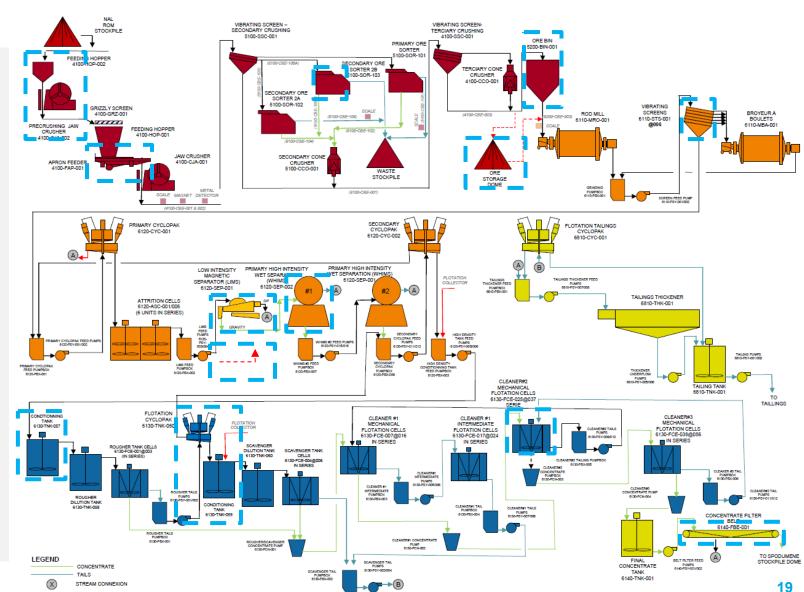

- Jaw crusher (C-150)
- Apron Feeder to C125
- · HP400 crusher
- · 4100 building HVAC
- Additional sorter
- Crushed ore dome (and temp. bypass)
- Fine ore silo insulation
- · Fine ore silo boiler

Mil

- 2 x additional stacksizer screens
- . LIMS
- Additional WHIMS
- · Conditioners 57 and 59 (with cyclopac)
- Secondary cleaners (previously used for conditioning)
- Heating system for collector
- Doubled filter belt capacity
- Several equipment bypasses

General

Programming and parameter optimisation

Throughput Improvement

Approaching DFS mill rates within 16 months

2018 - 2019 **Operating Data** 139 t/h

Pre-startup Improvements

- Addition of 2 stack sizer screens
- Replaced filter belt to double capacity

Post-startup Improvements

- · Optimised stack sizer screen aperture size
- Stack sizer feed inserts
- Rod and ball mill charge optimisation
- · Debottlenecking initiatives (ongoing) ex. tailings line routing
- · KPI development and monitoring

Achieved in May 2024

172 t/h

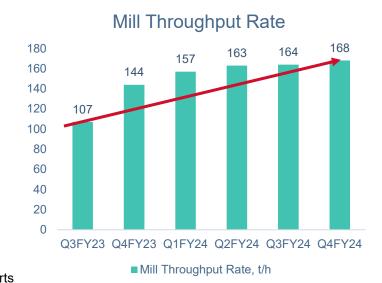

Picture 1: Rod mill charge level increase

Picture 3: New stack sizer screen feed inserts

USE personal

Recovery

In line with DFS estimates

2018 - 2019 **Operating Data**

62%

Feed:

1.22% Li₂O & 0.66% Fe

Concentrate:

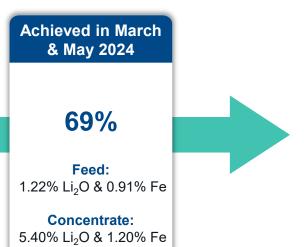

5.61% Li₂O & 1.21% Fe

Pre-startup Improvements

- Rougher conditioner (57) regained use of 3rd stage of cleaning
- Collector heating system
- Addition of frother

Post-startup Improvements

- · Scavenger high density conditioner (59) with cyclopac
- Collector type optimisation
- Optimised air distribution in flotation
- Water coagulant for improved water quality
- Improved instrumentation (ongoing)
- KPI development and monitoring
- In-line plant analyser (Courriel 8), under installation

Picture 1: Collector testing in lab

Picture 2: Mechanical slurry level measurement

Picture 3: New air distribution valves and flowmeters

Global Recovery

Reliability

use only

Surpassed 90% mill utilisation in 15 months

2018 – 2019 Operating Data

66%

Pre-startup Improvements

- Apron feeder to prevent jaw crusher plugging
- · New HP crusher
- Insulation of fine ore bin

Post-startup Improvements

- · Boiler to heat fine ore bin
- · Crushed ore dome
- C150 pre-crusher
- Crusher cleaning modifications
- Crusher water cleaning
- · Heat in 4100 crusher building
- Bypasses and redundancies (ongoing)
- Advancement of preventative maintenance program
- KPI development and monitoring

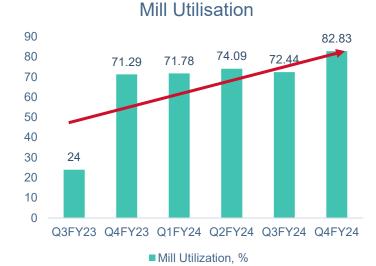

Picture 1: Temporary diverter system

Picture 2: Temporary feeder system

Picture 3: Permanent crushed ore dome

Notes.
1 Refer to ASX announcement 24 July 2024

Quality

Maintained target concentrate grades with increased iron feed grades

Pre-startup Improvements

- Additional sorter
- LIMS
- 2nd WHIMS
- Conditioner tank (57) which provided 3rd cleaner (better grade control)

Post-startup **Improvements**

- Extensive testwork
- Reagent optimisation
- Water coagulant

Achieved in June 2024¹

Feed:

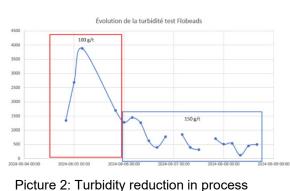

1.22% Li₂O & 0.91% Fe

Concentrate:

5.40% Li₂O & 1.20% Fe

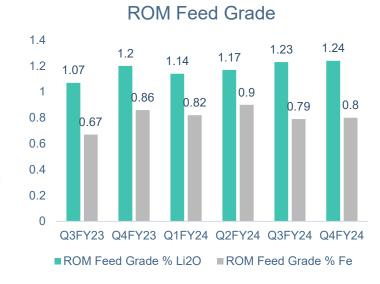

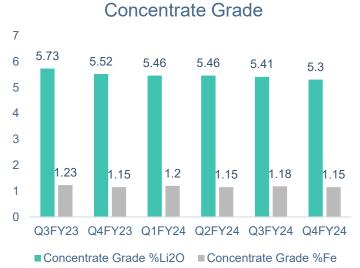

water with new coagulant

Logistics and Commercial

Logistics Chain

Logistics Chain

Concentrate Loading

Commercial

North American Lithium

+/- 200ktpa production

Notes

- 1 FY25 spodumene concentrate sales guidance is between 200,000 230,000 dmt at 5.4% Li₂O for 100% of North American Lithium sales (see ASX announcement 29 August 2024).
- 2 Piedmont offtake agreement is linked to market prices subject to a ceiling price of US\$900/dmt and a floor price of US\$500/dmt

Operating Performance and Improvement Projects

Project

C-150 Crusher

Objective

Assembly, installation, refurbishment and commissioning of the C-150 precrusher to deliver more consistent feed to the C-125 primary crusher

End of project

June 2024

Progression

In operation

Project

Crushed Ore Dome

Objective

Increase the reserve of crushed ores to circa 6kt. Loading on the rod mill feed conveyor during maintenance or shutdowns of the crushing circuit.

End of project

May 2024

Progression

In operation

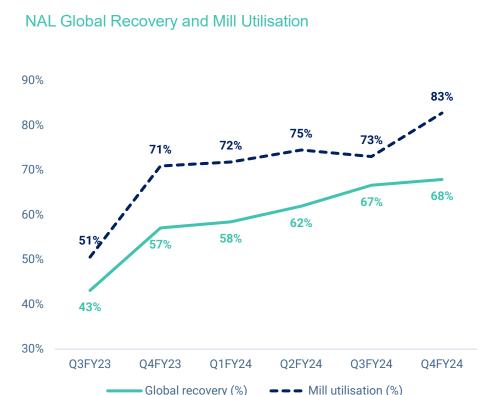

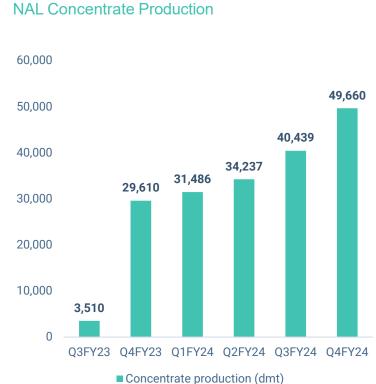

NAL Operational Performance

Delivering significant QoQ production increase

- · Production restart and maiden shipments within 2 years of NAL acquisition
- · Significant increase in ore mined, combined with higher grades delivered to plant due to increased blasting efficiencies and dilution management
- Continued focus on improving process plant utilisation and plant stability
- Shipments to customers continuing with improvements in logistics costs identified
- · Continued focus on safety improvement in FY25

NAL Exploration

North American Lithium 51% increase in Mineral Resource to 88Mt

and Inferred Resource

87.9Mt @ 1.13% Li₂O¹

L Contained lithium

Up 39%

Excellent conversion to reserves expected

82% in M&I category

Additional drilling

in 2024²

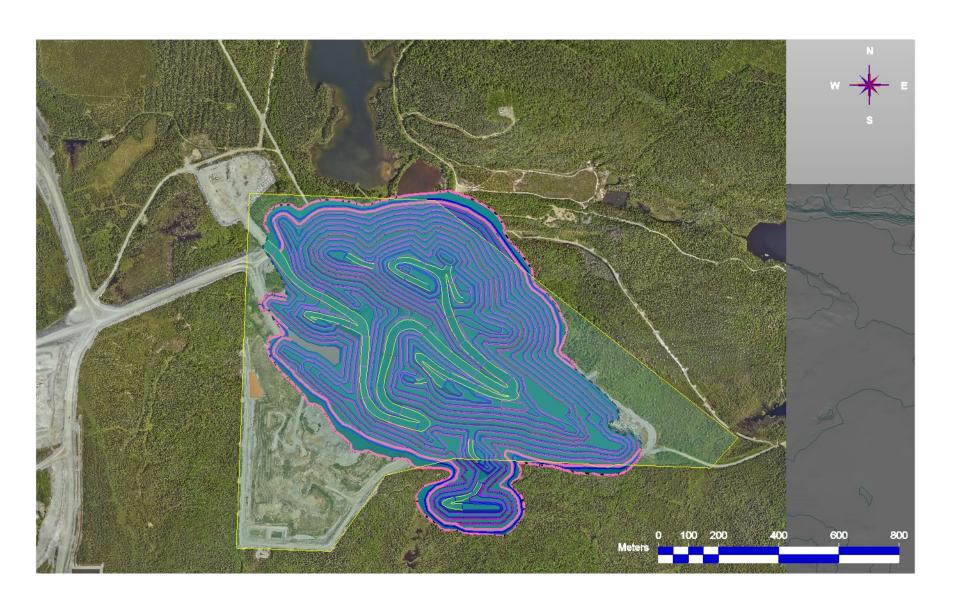

- 1 Refer to ASX Announcement on 27 August 2024 (at 0.60% cut-off grade).
- 2 Funded through Flow Through Share funding as allowed under the Income Tax Act (Canada).

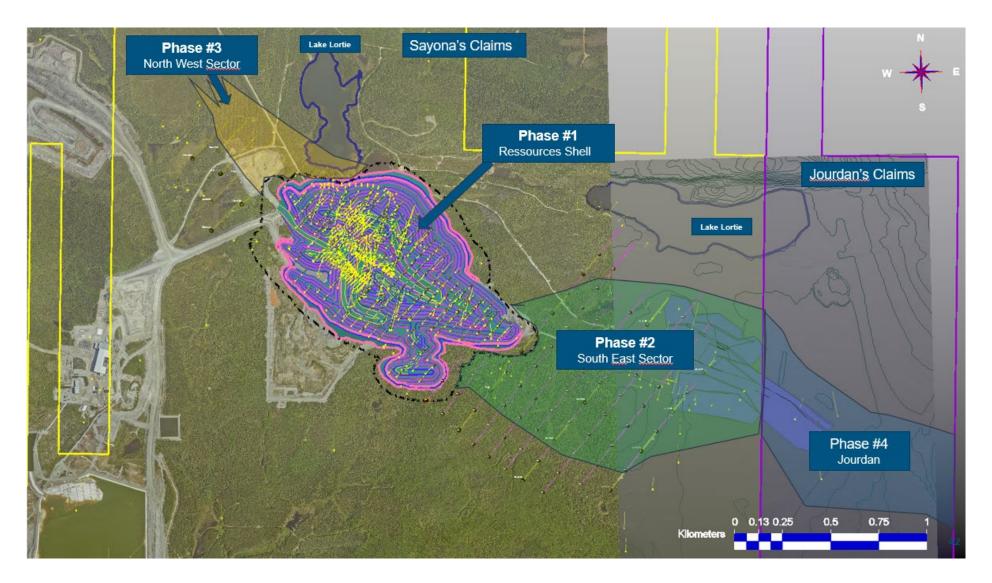

Feasibility Study 2023

Pit Shell

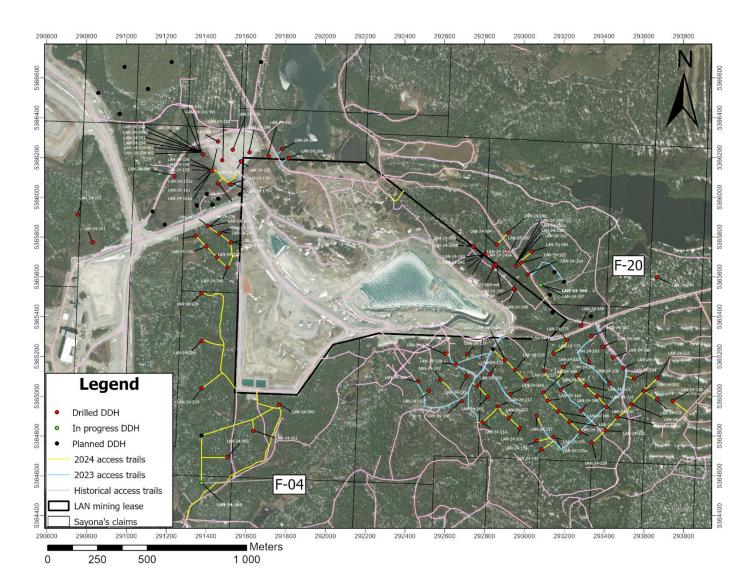

Drilling Campaign 2023

Testing extensions of mineralisation to NW and SE

Drilling Campaign 2024

In-fill drilling and testing further extensions to mineralisation

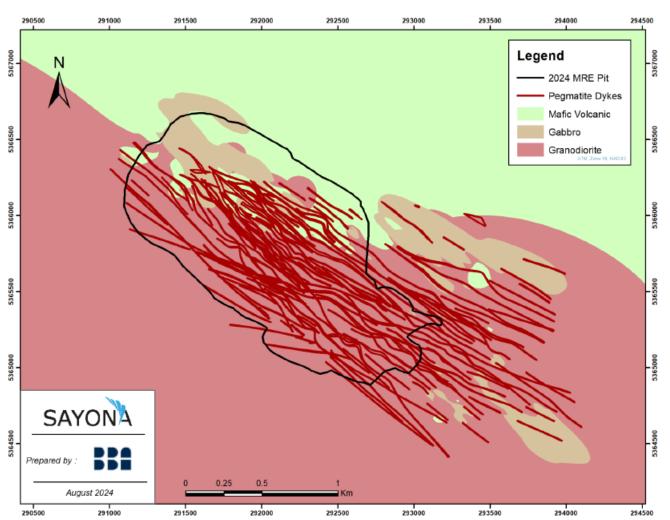

Y

NAL Contains Extensive Pegmatites Dykes

- Results demonstrate that North American Lithium is a major extensively mineralised lithium system.
- The primary metal is lithium and is mainly associate with spodumene, a lithium bearing pyroxene.
- Pegmatites also contains domains with **tantalum**, which could potentially be extracted as a by-product.

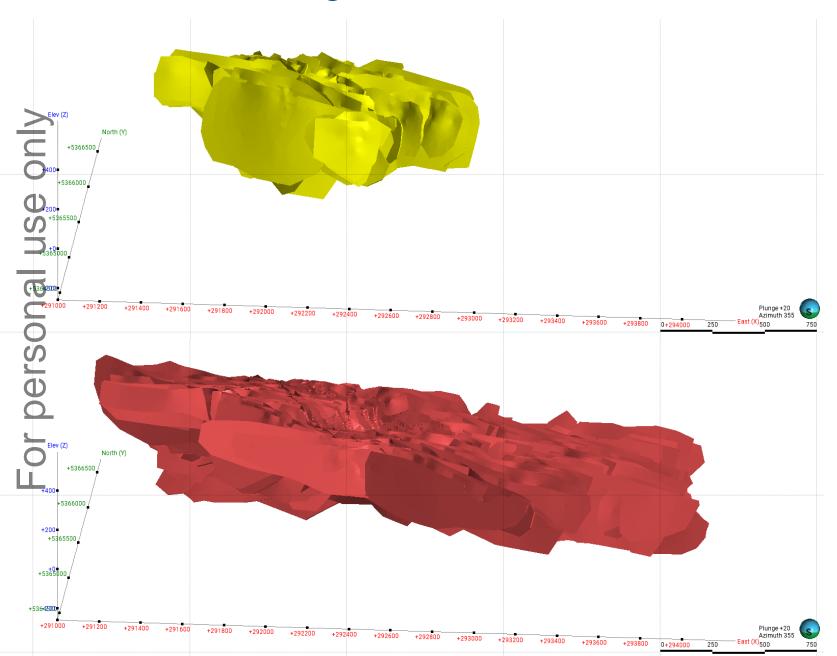

NAL MRE

2023 Mineral resource 2024 Mineral resource Looking at 40 azimuth Looking at 40 azimuth **Measured Mineral Resources** Inferred Mineral Resources Indicated Mineral Resources Resources Pit Shell

Revised Geological Model

2023 MRE

- contains 49 mineralised dykes

2024 MRE

- contains 109 mineralised dykes

NAL MRE

Sayona acquired 75% of NAL in 2021

Major resource expansion

51% increase in Measured, Indicated and Inferred:

Resource total of 87.9 million tonnes (Mt) @ 1.13% Li₂O (0.60% Li₂O cut-off grade).

188% increase in Measured and Indicated:

Resource total of 72.1 million tonnes (Mt) @ 1.14% Li₂O

Resource total of 72.1 million tonnes (Mt) @ 1.14% Li₂O (0.60% Li₂O cut-off grade).

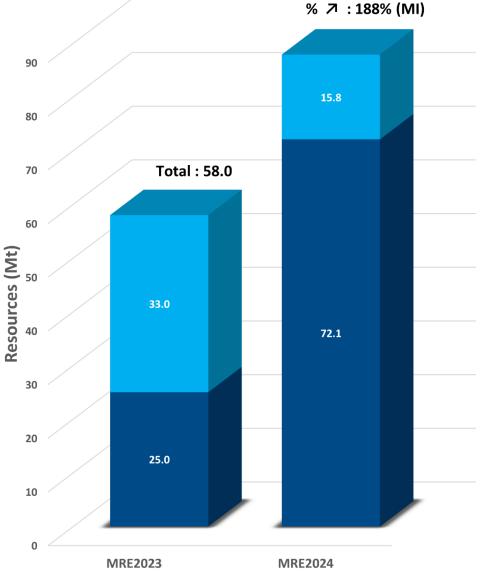

Between 2023 and 2024, Sayona's drill program has added materially to the total resource with an impressive conversion rate from Inferred to Measured & Indicated Resources categories.

Mineral Resources Estimation for the NAL project

■ Measured + Indicated

Inferred

Moblan Exploration

Moblan Lithium Project 81% upgrade in Mineral Resource to 93Mt

JORC Measured, Indicated and Inferred Resource

93.1Mt @ 1.21% Li₂O¹ 70% in M&I category

Easily accessible resource

High grade, low strip ratio, and high Li₂O recovery

Close to, and well-serviced by, key infrastructure and transport nodes

Such as roads, railroads, and power lines – enabling year-round access

Excellent access

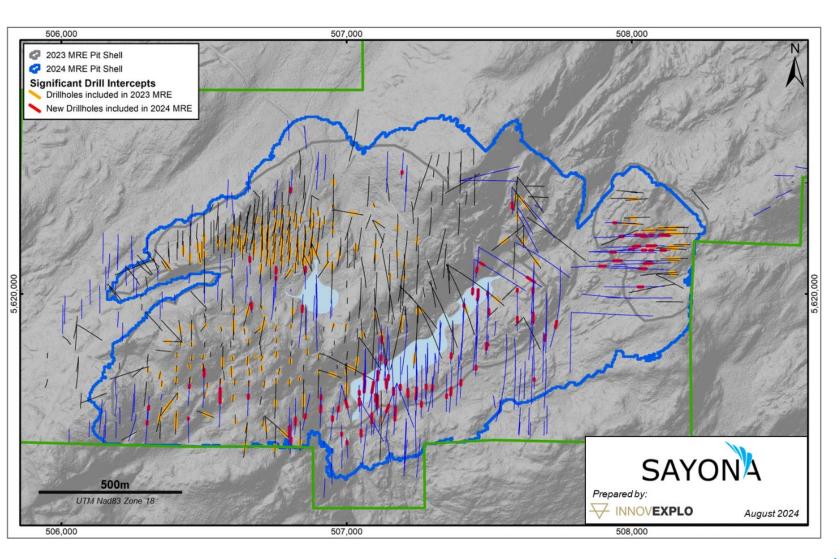

to high growth EV and battery markets across North America

October 2021: Sayona Acquisition of 60%

- Total JORC Mineral Resource (Measured, Indicated and Inferred) increased by 81% totaling 93.1 million tonnes (Mt) at 1.21% Li₂O (cut-off of 0.55% Li₂O), up from 51.4Mt @1.31% Li₂O (at 0.55% Li₂O).
- Measured and Indicated categories are **up 59% to 65.1 million tonnes @ 1.25% Li₂O** and account for 70% of the total resource
- The exceptional increase in mineral resources at Moblan reflects the addition and integration of all the drilling results from the 2023 program and from a major revision of the geological model

Drilling by Sayona has added materially to the total resource

Mineral Resources Estimation for the Moblan Li Project
