

# Refurbished Processing Plant Reaches Full Capacity

*Plant now operating at 400ktpa throughput rate*

## Highlights:

- **Ramp up complete:** Crushing and grinding successfully ramped up over the last four weeks and consistently running at 50 tonnes per hour (tph), 20% above the original design.
- **Gold recovery exceeding budget:** Gold recovery rates from oxide ore have consistently surpassed the initial forecast of 85%.
- **Steady Cash Flow:** Weekly gold and silver dore sales have been established, ensuring a reliable stream of income for Kingston Resources.

Kingston Resources Limited (ASX:KSN) ('Kingston', or 'The Company') has successfully ramped up production at the Mineral Hill processing plant, now reaching 400kt per annum. Over the past four weeks, the facility achieved a record single-day throughput of 1,144 tonnes. The mill is consistently operating at a 50tph, already exceeding the nameplate design. Management is confident that further incremental improvements can be made by optimising various inputs and operating conditions to both mine and the plant.

## Kingston Resources Managing Director & CEO, Andrew Corbett, comments:

*"This is another impressive achievement from our mining and processing teams at Mineral Hill. Not only did we deliver the refurbishment at a low cost of \$13.2m, but we have also rapidly increased production to exceed nameplate capacity. We have entered the growth stage at Mineral Hill"*
