

## Drilling Underway at Eileen Bore

9 October 2024

### Highlights:

- Drilling underway at the Company's 100% owned Eileen Bore Prospect with a ~1,200m initial programme planned
- 3D modelling at Eileen Bore demonstrates that the down plunge of existing mineralisation is OPEN
- Drilling will follow up on historical intersections including:
  - 120m @ 0.73% Cu, 0.29% Ni & 0.86g/t PGM<sub>3E</sub> from 0m (EOH) <sup>(EBRC 010)</sup>
    - Incl. 16m @ 1.0% Cu, 0.36% Ni & 0.99g/t PGM<sub>3E</sub> from 100m
  - 96m @ 0.70% Cu, 0.29% Ni & 0.78g/t PGM<sub>3E</sub> from 24m (EOH) <sup>(EBRC 003)</sup>
    - Incl. 10m @ 1.08% Cu, 0.34% Ni & 1.04g/t PGM<sub>3E</sub> from 56m
- Drilling will also test additional undrilled targets with confirmed nickel-copper sulphides at surface immediately adjacent to Eileen Bore
- First drilling at Eileen Bore in over 20 years

Future Metals NL ("Future Metals" or the "Company", ASX | AIM: FME) is pleased to announce that diamond drilling has commenced at the Company's 100% owned Eileen Bore Prospect, which is targeting extensions to very wide zones of copper & nickel mineralisation encountered in historic third party drilling (**Drill Target 1**), and an untested anomaly ~1km to the east (**Drill Target 2**), as outlined in Figure One.

#### Future Metals' Chairman, Patrick Walta, commented:

*"First drilling by Future Metals at our Eileen Bore Prospect is an exciting step forward for the Company and follows a thorough process to secure the requisite heritage clearance approvals. Topdrill have now mobilised to site and drilling is underway. This initial programme is targeting confirmation and the potential extension of historical Cu-Ni-PGM mineralisation at Eileen Bore, located within the Alice Downs Corridor. Eileen Bore is located less than 15kms northeast to the Company's existing flagship Panton PGM Project and provides significant scope for secondary ore feed to potential future operations."*

## Eileen Bore Prospect

The Eileen Bore Prospect is an advanced exploration target with historic drilling identifying a wide zone of Cu-Ni-PGM mineralisation from surface along a known strike of approximately 300m. Mineralisation is hosted within a gabbro-pyroxenite zone and is comprised of chalcopyrite, pentlandite and pyrrhotite. Mineralisation remains open down dip and at depth with drill testing only to 96m.

To the northeast, Drill Target 2 is based on coincident magmatic chalcopyrite-pyrrhotite mineralisation identified in peridotite rock chips by petrology and is associated with Ni-Cu, PGE and Au soil anomalism. There has been no historic drill testing in the area.
