

31 October 2024

Quarterly Activities Report – September 2024

Golden Mile Resources Limited (ASX: G88, “Golden Mile” or “the Company”) is pleased to present its Quarterly Report for the period ending 30 September 2024.

COMPANY HIGHLIGHTS

Pearl Copper Project, Arizona, USA

- Golden Mile completed due diligence on the Pearl Copper Project and entered into a **joint venture-acquisition** agreement with Outcrop Silver & Gold Corporation
- Project adjacent to the super-giant **San Manuel-Kalamazoo** porphyry copper-molybdenum deposit
- **Odyssey and Ford prospects** identified within the Project as immediate highly prospective, exploration drill targets
- Rock chip sampling at the Odyssey prospect returned exceptional assay results:
 - **Silver** assays up to **930 g/t**
 - **Copper** assays up to **10.05%**
 - **Zinc** assays up to **8.09%**
- Mineralisation at the **Odyssey prospect** is visible at the surface with a strike length of **>800m** and includes multiple NNW trending extensional veins
- Historic data at the Ford prospect indicates grades up to **10.6%** copper, **31.3%** lead and 0.54oz (**16.7 g/t**) gold.

Corporate

- Appointment of Company Secretary Mr Justyn Stedwell, who has over 17 years’ experience as a Company Secretary of ASX listed companies

For personal use only

PEARL COPPER PROJECT (PEARL), ARIZONA, USA (G88 Earn In)

Pearl is located within a world-class mining jurisdiction of the Laramide Porphyry Copper Province within the Southwestern North American Porphyry Copper Province. This is the principal metallogenic province of the United States (US) accounting for approximately 70% of total US copper production.

Figure 1: Significant Copper Mines and Projects in Arizona USA

The Project is adjacent to the world class San Manuel-Kalamazoo Mine, with historic production of approximately 1Bt @ 0.7% Cu. Many other deposits occur in the greater area around the Project, with Arizona being host to some of the world’s largest copper discoveries.

During the Quarter, Golden Mile completed its due diligence on the Pearl Copper Project and entered into a joint venture-acquisition agreement with Outcrop Silver & Gold Corporation (“Outcrop”) ².

A field trip, undertaken as part of the due diligence, confirmed the very high prospectivity of the project area for company-making copper resources. This field examination, undertaken in late July, and while only preliminary in nature, delineated the **Odyssey and Ford prospects** within the Pearl project area as immediate, highly prospective, exploration drill targets.

For personal use only

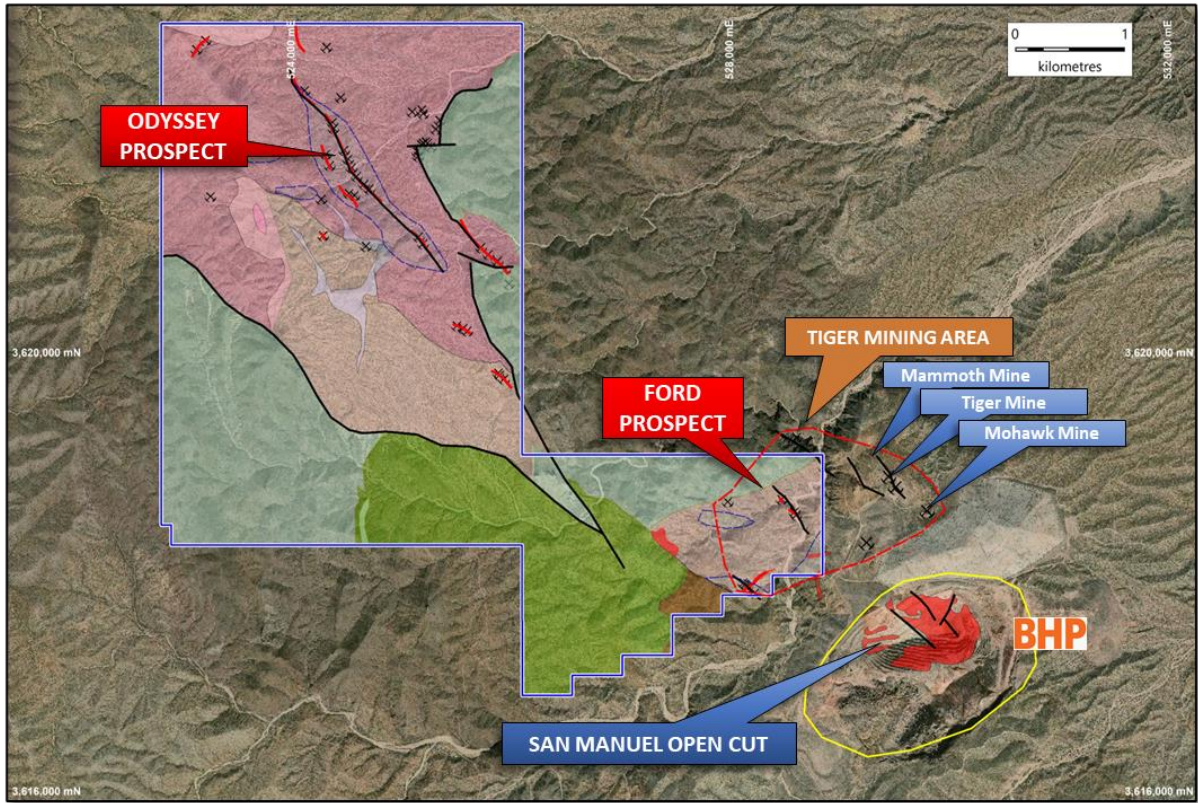

Figure 1: Ford Prospect area illustrating the local historical mines

The Odyssey prospect consists of a sub outcropping multiple vein copper target with surface mineralised widths up to five metres and a strike length of around 800 metres. Rock chip samples³ taken for geochemical orientation, covered approximately 400m of the mapped strike length and centred on the historic workings.

Table 1: Pearl Project rock chip assays results

Sample	Prospect	East	North	RL	Au	Ag	Cu	Pb	Zn
		(m)	(m)	(m)	(ppm)	(ppm)	(%)	(%)	(%)
24PRL001	Odyssey	524450	3621949	1101	0.09	233	2.37	0.45	0.15

For personal use only

The assays from these rock chips have confirmed significant, high-grade assays of not only copper, but also silver and zinc. This has expanded the exceptional prospectivity of the Project for not only copper but also multi-element epithermal mineralisation.

For personal use only

Figure 3: Odyssey Prospect - rock chip assays over geology and alteration halo with veins.

The Ford prospect is a circa 1940's copper-zinc development and extensive surficial alteration suggests a well-developed mineralised system over which mining is reported to have ceased because of high water flows at shallow depths (55 metres). Historic data (Baird, 1942) indicates grades up to **10.6%** copper, **31.3%** lead and 0.54oz (**16.7 g/t**) gold.

The Company is actively advancing its maiden drilling program for the Odyssey Prospect and is currently working through the government approval process for the associated land clearing permits.

Prior to the execution of the maiden drilling, the resolution of targets at Odyssey will be improved via detailed geological and structural mapping, supported by further rock chip sampling. Across the greater extent of the Project, further geochemical programs will include more detailed soil and stream sediment sampling.

The Company is also investigating the most effective geophysical targeting methods for the Pearl Copper Project to identify further polymetallic anomalies.

QUICKSILVER NICKEL-COBALT PROJECT (100% G88)

The Quicksilver Project, located near the town of Lake Grace, is approximately 300km south-east of Perth, Western Australia. Centred over a narrow greenstone belt, the Project is prospective for nickel-cobalt, and gold. The Project is host to significant nickel-cobalt mineralisation overlying a series of sheet flow facies komatiite units. Drilling by the Company in 2017-2018 resulted in a maiden indicated and inferred Mineral Resource Estimate of 26.3Mt at 0.64% Ni and 0.04% Co for 168,500 tonnes of contained nickel, and 11,300 tonnes of contained cobalt¹.

Figure 4: Location of Quicksilver Nickel-Cobalt Project.

For personal use only

During the Quarter, the Company furthered investigation into the unique mineralogy of the Quicksilver deposit with the continuation of Hyperspectral logging carried out by CoreLogic Inc. This round of spectral analysis focussed on the chip samples recovered from the late 2023 reverse circulation drill program. This was a valuable program as it gained critical insight into the fresher, underlying host lithologies. Being a clay hosted deposit, the vast majority of previous drilling carried out at Quicksilver focussed on the weathered zone.

It can be seen that higher grade zones of nickel mineralisation have a distinct correlation with vermiculite mineralisation, and also biotite zones, and even chlorite. While work on interpreting the hyperspectral is ongoing, there appears to be a correlation with lower magnesium, biotitic zones thought to represent upper flow zones in an extrusive environment. Work is ongoing to improve the geological and mineralisation model at Quicksilver.

PROJECT EVALUATION AND FIELD ASSESSMENTS, WESTERN AUSTRALIA (G88 100%)

Golden Mile completed a detailed review of all projects within the portfolio during the Quarter. As a part of this strategic review, the Company completed its detailed technical assessment of the Marble Bar and Murchison Projects and as a result, the Board made the decision to relinquish the Marble Bar and Murchison tenements.

This entails the surrender of granted exploration licences E45/6210, E45/6211 and E20/1005, and the withdrawal of Exploration Licence Application ELA45/6709.

LEONORA GOLD JV (PATRONUS MINING EARNING 80%)

The Leonora Gold JV is located approximately 40km north-east of Leonora and 230km north of Kalgoorlie. It comprises a regionally significant tenement package focussed on the Benalla, Normandy, Monarch and Ironstone Well Gold Projects located east of the Leonora mining centre in the Eastern Goldfields of Western Australia.

The Company's projects are along strike from and surrounded by significant gold production, development, and exploration projects, including St Barbara's Gwalia Project (ASX: SBM) and Kin Mining's (now called Patronus Resources Ltd) Cardinia Project (ASX: PTN) which hosts a Resource of 1.3Mozs gold across a number of near-surface deposits.

There have been no on ground activities this Quarter, although assays for the first portion of the auger program at Normandy on E37/1456 were received with no significant results.

In the next quarter Patronus will be completing a heritage survey for aircore lines near Benalla and an area heritage survey at Royal Harry/Meghan. An aircore program is planned at the 'Seahorse' prospect on the Benalla tenements with mapping and reconnaissance work at Royal Harry/ Meghan.

For personal use only

GIDGEE JV PROJECT (GATEWAY MINING LTD EARNING 80%)

The Gidgee JV Project covers an area of approximately 400km² on the western side of the highly prospective Gum Creek Greenstone Belt, located approximately 70km north of the township of Sandstone in Western Australia, with Gateway Mining Ltd (ASX: GML, "Gateway") now controlling more than 1,000km². The Project is prospective for gold and base metals.

During the Quarter, Gateway consolidated all geological interpretations, including aeromagnetics into a revised geological map, which identified a significant increase in nickel prospective ultramafic rocks.

Gateway commenced a targeting exercise for gold and base metal prospectivity on the tenure identifying 16 preliminary target areas of interest. A series of work proposals have been generated and identified several targets outside historically explored areas. Gateway intends to perform field mapping and ground truthing within the next quarter.

CORPORATE**Capital Raising**

No capital raising was conducted during the Quarter.

Board

As announced on 02nd September 2024, Mr Justyn Stedwell was appointed as Company Secretary. Justyn has over 17 years' experience as a Company Secretary of ASX listed companies and has also served as a Non-Executive Director on several ASX listed company Boards. He holds a Bachelor of Commerce from Monash University, a Graduate Diploma of Accounting from Deakin University and Graduate Diploma in Applied Corporate Governance from the Governance Institute of Australia.

Investor Relations

Meetings were held with various stockbroking and capital investment firms across Australia.

Acquisitions and Joint Ventures

During the Quarter, Golden Mile completed due diligence on the Pearl Copper Project and entered into a joint venture-acquisition agreement with Outcrop Silver & Gold Corporation.

Payments to Related parties

As required in Section 6 of the Appendix 5B Quarterly cash flow report, the Company made payments to related parties and their associates during the Quarter comprising payments to directors, management and related service providers totalling \$100,000.

Forward-Looking Statements

This document may include forward-looking statements. Forward-looking statements include, but are not limited to, statements concerning Golden Mile Resources Ltd (ASX: G88) planned exploration program and other statements that are not historical facts. When used in this document, the words such as "could," "plan," "estimate," "expect," "intend," "may", "potential," "should," and similar expressions are forward-looking statements. Although Golden Mile Resources Ltd (ASX: G88) believes that its expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements.

Competent Persons Statement

The information included in the report is based on information compiled by Mr Martin Dormer, a consultant to Golden Mile Resources Ltd. Mr Dormer is a Member of the Australasian Institute of Mining and Metallurgy (Member ID 304615), and the Australian Institute of Geoscientists (Member ID 7370). Mr Dormer has sufficient relevant experience in the styles of mineralisation and deposit type under consideration, and to the activity which he is undertaking, to qualify as a Competent Person as defined in "The Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code 2012 Edition)". Mr Dormer consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

Martin Dormer is an employee of Golden Mile Resources Ltd and currently holds securities in the Company.

The Company confirms it is not aware of any new information or data that materially affects the exploration results set out in the in the original announcements referenced in this announcement and all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original announcements.
