## About Titan Minerals

Titan Minerals is an emerging gold developer and copper explorer focused on uncovering Tier One deposits in Ecuador. With several large exploration projects in the country's southern Andean copper belt, Titan has significant exposure to large-scale gold and copper in a highly prospective, yet underexplored part of the world.

The Dynasty Gold Project hosts a substantial resource of 3.1 Moz gold and 22 Moz silver, with ongoing exploration confirming extensive mineralization beyond the current resource. A 10,000m drilling campaign is underway, targeting lateral and depth resource expansion, with an updated resource estimate expected by mid-2025.

In September 2024, Titan was pleased to welcome Hancock Prospecting subsidiary company, Hanrine, as a JV & Earn-in Partner for their Linderos Copper Project, whereby Hanrine can earn up to 80% interest by investing up to \$180M and reaching a decision to mine. Titan is free-carried until Hanrine reach 80%. A 10,000m drilling program to explore Linderos copper porphyry potential commenced in late 2025, with consistent drill results anticipated in the coming months.
