About Iondrive

Iondrive is developing an innovative metal extraction process using Deep Eutectic Solvent technology (DES). Its initial business case is focussed on battery recycling where the proprietary method is designed to efficiently recover critical metals, including nickel, cobalt, lithium, and manganese, from black mass in a closed-loop, environmentally friendly process. Unlike conventional hydrometallurgical and pyrometallurgical approaches, Iondrive's DES technology operates at lower temperatures, eliminates the need for aggressive acids, and offers a tuneable chemistry that can selectively extract individual metals. Whilst progressing the battery recycling application for its DES technology, Iondrive is actively seeking to expand the commercialisation opportunities into other markets, including mineral processing and Urban mining of e-waste.

Urban Mining: Securing Supply Chains for Critical Minerals

Investor Update

September 2025

Urban Mining: A New Standard for Critical Mineral Recovery

For personal use only

Global Processing Gaps Across E-waste, Batteries, and Mining Are Driving a Critical Raw Materials Deficit

Example: e-waste Generation vs Collection (2022)

Critical minerals leave the country

Western nations rely on energy-intensive smelters abroad, losing control of strategic resources.

Undercapacity in the West

Minimal refining infrastructure outside China → near-total dependence on imports.

Outdated processing

High cost, high waste, low recovery, carbon-heavy, and not designed for recycling.

Sovereign push rising

Governments and OEMs want local supply chains to secure long-term capability.

Closing the Critical Minerals Gap

\$150B+ TAM by 2030 across battery recycling, e-waste, and mining feedstocks

E-WASTE

Market ~US\$91B

CAGR: 3.6%

BATTERY RECYCLING

Market~US\$13.9B

CAGR ~17-19%

MIXED HYDROXIDE
PRECIPITATE (from mining)

Sulphate Market
(Nickel + Cobalt):
~US\$12B | CAGR: 12%

Conventional processes are slow, carbon-heavy and high-capex — leaving a deficit in critical raw materials

Minimal Viable Product (MVP) Path:
eWaste & MHP

- Real markets. Real customers. Real problems.
- Faster to market with lower capital requirements.
- Strong customer integration and early sales potential.
- We're building lean, fit-for-purpose MVPs to address urgent needs in large, accessible markets.

Technology Readiness Level (TRL)
Path: Battery Recycling

- Massive opportunity – projected to reach ~US\$100B by 2040.
- But the market is still forming — and needs certified, scalable solutions.
- We're going deeper on tech validation (TRL 6/7) to ensure investor confidence and position for global scale.

Why it Matters

We're matching our approach to each market:

MVP for speed and traction where the market is ready

Sources for TAM estimates: Rho Motion, EV & Battery Outlook / Recycling Market (latest available).United Nations – Global E-waste Monitor (UNITAR/ITU/ISWA; latest edition). londrive internal market view (2025) for mining intermediates (e.g., MHP Ni+Co), informed by public company disclosures and analyst datasets. All USD, rounded; londrive assumptions applied to size/CAGR where noted.

TAILORED CHEMISTRY THAT SELECTIVELY EXTRACTS METALS

A Cleaner, Faster, More Flexible Solution to Meet Demand

What DES Delivers:

- Recyclable green solvents for e-waste, batteries & mining feedstocks
- Low toxicity, biodegradable, reusable
- Tailored chemistry selectively extracts target metals
- Re-usable unlike acids — more recovery, less waste

How it Works:

- Dissolve metals via complex hydrogen bonding interactions
- Tailored chemistry enables selective extraction of specific metals, depending on the chosen HBD/HBA pair

Replacing Smelting and Single-Use Acids with a Recyclable, Closed-Loop DES Process

STANDARD PROCESS

✗ HIGH ENERGY

PYROMETALLURGY
~50-85% metal recovery

✗ HIGH REAGENT USE

HYDROMETALLURGY
~50-85% metal recovery

✗ OFFSHORED PROCESSING

HIGH-HEAT SMELTING

CYANIDE/ACID/ KEROSEANE & REFINING

HIGH CAPEX BURDEN

IONDRIVE'S CLOSED-LOOP PROCESS

✓ LOW ENERGY

✓ NON-TOXIC

✓ LOW COST

✓ MORE ENVIRONMENTALLY-FRIENDLY

SOLVOMETALLURGY
~98% metal recovery

36% LOWER CAPEX ADVANTAGE

For personal use only

Iondrive Revenue Pathways

FEEDSTOCK SOURCES

-  **E-waste (Urban Mining)**
Source: Large recyclers (Colt)
-  **Mining Intermediates**
Source: tailings, concentrates, refinery intermediates
-  **Battery Materials**
Source: black mass, end-of-life EV/ESS batteries

IONDRIVE PROPRIETARY PROCESSING

HIGH-VALUE OUTPUTS

- Recovered Metals & Oxides
- | Output | Source | End Market / Customer |
|-----------------|---------------------------|---|
| Cu, Au, Pd, REE | from e-waste | Electronics & Urban Mining (Smartphone, Microchip) |
| Ti, REE | from mining intermediates | Clean Energy & Defence (Jet engine, Rocket) |
| Li, Ni, Co, Mn | from batteries | EV & Battery Supply Chain (EV charging, Electric car) |

END MARKETS / CUSTOMERS

REVENUE

Extracting Value from Complex Ores, Tailings, and Waste

- DES enables selective, efficient recovery even at low grades
- Potential to unlock value from complex ores, tailings & waste streams that conventional methods avoid
- Targets metals critical to batteries, electronics, and renewables
- Supports supply security in both circular and virgin economies

Global Experience in Mining, Technology, and Commercialisation

Michael McNeilly
Chair - BA Econ

Chief Executive Officer of Strata Investments Holdings Plc. (Substantial shareholder of ION).
Extensive experience in listed companies and is currently NED of ASX-listed Cobre Limited.
Sits on several private company Boards within the Strata Investments Tiger Group.
Past Board appointments include MOD Resources Limited (up to acquisition by Sandfire in November 2019), Metal Capital Limited, Greatland Gold Plc and Connemara Mining Plc.

Dr Jack Hamilton
NED – PhD (Chem Eng)

Highly accomplished senior executive and board director
Significant leadership roles incl. Director of NorthWest Shelf Ventures for Woodside, overseeing Australia's largest resource project.
NED roles include commercialisation of start-ups notably Calix Ltd and Anteo Diagnostix Ltd

Andrew Sissian
NED – CPA, Macc, Bcom (Finance)

Chief Executive Officer of Strata Investments Holdings Plc. (Substantial shareholder of ION).
Extensive experience in listed companies and is currently NED of ASX-listed Cobre Limited.
Sits on several private company Boards within the Strata Investments Tiger Group.
Past Board appointments include MOD Resources Limited (up to acquisition by Sandfire in November 2019), Metal Capital Limited, Greatland Gold Plc and Connemara Mining Plc.

Adam Slater
NED - BA

Three decades of invaluable experience in the commodities industry.
Led the development of the commodity division at CWT Limited, a company listed on the SGX, from 2007 to 2018. Pivotal to the growth in the CWT commodities division, which accounted for over 80% of Group revenues (\$\$12 Billion out of \$\$14 Billion) and in excess of 50% of the Group's profits.
Current primary focus towards venture capital, contributing his expertise to multiple company boards and advisory committees.

Hugo Schumann
NED - CFA, MBA (INSEAD), SEP (Stanford)

Current CEO – USA, Elemental Holding – Leading the U.S. arm of a global metals recycling and refining leader.
Current Founder & CEO – EverMetal – Leading the world's first dedicated PE backed investment platform for critical metals recycling.
Former CEO – Silver, Hindustan Zinc – Led one of the world's largest silver producing businesses.
Former CFO – Jeti Resources – Scaled copper extraction technology to commercial deployment backed BHP and Freeport

Dr Ebbe Dommiss
CEO - B.Eng (Chem) MSc PhD MBA GAICD

Seasoned professional with over 25 years of commercialising technologies, execution, and manufacturing.
Previously served as the COO at Circa Group, an Australian startup that commercialised a biochemical process from lab-scale to commercial scale.
Prior, as GM of Pact Group, an ASX-listed manufacturer, responsible for establishing a world-class plant in Indonesia.

Ray Ridge
CFO & Company Secretary BA(Acc), CA, GIA(cert)

A senior financial and commercial professional with over 30 years experience across a diverse range of industries.
CFO and capital markets experience with four other ASX listed companies, with two in technology commercialization.
Previous roles include National GM Commercial in a large global engineering firm (now WSP Global) and CFO of the agricultural products division of Elders Limited.

Lewis Utting
Commercial Director BAppSc, GAICD

Former Managing Director and CEO of ASX listed SciDev Ltd, driving rapid growth and shareholder returns.
Previously BASF Global Business Development and R&D manager for Mining
20 years experience in business management servicing chemical, mining, water treatment, and oil & gas industries.
Expertise in technology commercialization, capital markets, and strategic partnerships

For personal use only

Positioned for Scale & Potential Value Uplift

One Platform, Many Verticals

A modular DES platform adaptable to multiple recovery pathways, potential to create value across three horizons: early e-waste revenues, battery intermediates, and longer-term critical minerals/black mass

Proven High-Recovery Technology

londrive's DES chemistry achieves extremely high recovery rates (~98%) for critical minerals such as Li, Ni, Co and Mn — a step-change over conventional smelting or acid processes

Large & Growing Addressable Markets

Multi-billion-dollar opportunities across three verticals — e-waste, EV battery recycling and mineral processing — with supply deficits and regulatory pressure creating urgent demand

Early Cashflow Pathway

Near-term revenue potential (0–2 years) from e-waste recovery de-risks the business model and supports scaling into higher-value verticals

Validated Economics & Scalability

Independent benchmarking and engineering studies confirm strong commercial viability, with materially lower CAPEX/OPEX and industrial scalability

Strategic Partnerships & Valuation Re-Rating Potential

Backed by partners (Colt, Elemental, PEM/RWTH Aachen), with ASX and global peers re-rating 5–10x at similar milestones — highlights potential upside if londrive executes

Forward looking statements

This document contains certain forward-looking statements that involve risks and uncertainties. Although we believe that the expectations reflected in the forward-looking statements are reasonable at this time, we can give no assurance that these expectations will prove to be correct. Given these uncertainties, readers are cautioned not to place undue reliance on any forward-looking statements. Actual results could differ materially from those anticipated in these forward-looking statements due to many important factors, risks and uncertainties including those risks detailed from time to time in the Company's announcements to the ASX including, without limitation, risks that the technologies are not commercially viable, provisional patents may not result in successfully granted national patents, others may independently develop similar or improved technologies or design around patents or patent applications, or that granted patents will provide meaningful protection or competitive advantages. All reasonable efforts have been made to provide accurate information, but the Company does not undertake any obligation to release publicly any revisions to any "forward-looking statement" to reflect events or circumstances after the date of this presentation, except as may be required under applicable laws. Recipients should make their own enquiries in relation to any investment decisions from a licensed investment advisor.

Deep Eutectic Solvent (DES) technologies, including the Iondrives platform, have not yet been demonstrated at full industrial scale. The metals and application areas shown in this presentation are based on feasibility studies conducted by third parties, including Iondrive in some cases, and should not be interpreted as proof of commercial outcomes.

Not an offer of securities

This Presentation is not a prospectus, product disclosure statement or other offering document under Australian law (and will not be lodged with ASIC) or any other law. This Presentation does not constitute an offer, invitation, solicitation or recommendation with respect to the purchase or sale of any shares nor does it constitute financial product or investment advice nor take into account your investment objectives, taxation situation, financial situation or needs.

An investor must not act on the basis of any matter contained in this Presentation but must make its own assessment of the Company and conduct its own investigations and analysis. Before making an investment in the Company, a prospective investor should consider whether such an investment is appropriate to their particular investment objectives and financial situation and seek appropriate advice, including legal, taxation and financial advice appropriate to their jurisdiction and circumstances.

United States and Other jurisdictions

The Company's securities have not been and will not be registered under the U.S. Securities Act of 1933, as amended (the Securities Act), or under the securities laws of any state or other jurisdiction of the United States. Accordingly, the Company's securities may not be offered or sold, directly or indirectly, within the United States or to, or for the account or benefit of, U.S. Persons (as defined in Regulation S under the Securities Act as amended). This Presentation may not be distributed within the United States or to any person in the United States This Presentation may only be accessed in other jurisdictions where it is legal to do so.

APPENDIX

Urban Mining with DES: Meeting Rare Earth Demand

- Global REE demand set to triple by 2035, driven by EVs, wind, and industry
- Heavy REE supply highly concentrated in China (>80% refined there)
- E-waste is an untapped domestic source of both light and heavy REEs
- Low recovery rates create an opportunity for scalable extraction with DES

“DES: Recovering REEs from e-waste to diversify supply and reduce offshore dependence”

DEMAND, MINING AND SEPARATION SUPPLY FOR LIGHT AND HEAVY RARE EARTH ELEMENTS (REEs) BY REGION, METAL CONTAINED, KILOTONNE, 2035

Sources: The global e waste monitor: <https://ewastemonitor.info/the-global-eWaste-monitor-2024/> , McKinsey MetalSpans; McKinsey MineSpans

E-waste is proven at lab scale, not industrially.

DES: Unlocking the \$91B E-waste Metals Opportunity

Economic Value of Metals from E-waste

(Before Management) in USD billion (2022)

Metal composition of e-waste by mass

GLOBAL MARKET UPSIDE

“Only 22% of e-waste is formally recycled — leaving most metals lost to landfill and slag. Recovering these could strengthen domestic supply chains.”

“Beyond gold: DES can recover REEs before they’re lost* — with PCBs containing up to \$36,000/tonne of recoverable metals.”

Sources: The global E waste monitor: <https://ewastemonitor.info/the-global-eWaste-monitor-2024/> , : Gold recovery from waste: <https://sustainenvironres.biomedcentral.com/articles/10.1186/s42834-022-00118-x> , <https://www.sciencedirect.com/science/article/abs/pii/S0956053X21006759> ,

*DES has extracted REE’s at bench scale only

Breakthrough Technology for a Huge Battery Recycling Market Opportunity

Commercialisation activities align with EV metal market demand

For personal use only

Driving Urgent Battery Recycling Solution

For personal use only

EV growth accelerating

Black mass supply to reach 11.3M tonnes by 2040.

Recycling demand outpacing capacity

Black mass growth +25% CAGR, but **EU lacks hydromet capacity** (74% deficit).

Regulations pushing localised recycling

EU & US policies drive sovereign supply chains.

Current methods are costly & unsustainable

Need for cleaner, scalable solutions

Source: Joint study between Strategy & and PEM of RWTH Aachen University, August 2023

Adjusted forecast based on announced GWh capacity compared to current project start-up status, based on desktop research and expert estimates.

Pre-Feasibility Study (PFS) Confirms Exceptional Recovery Rates and Market Viability

BATTERY RECYCLING

Business Model

londrive intends to generate value uplift by initially processing black mass (battery waste) into reusable critical minerals and upgrading them into high-value cathode precursors. This approach bridges battery recycling and advanced material production, adding economic and market value.
