9th July 2026

Further Duchess of York assays continue to demonstrate both high grade and broad zones of significant Gold mineralisation

HIGHLIGHTS

- Assay results from a further 15 RC drill holes continue to demonstrate the scale and continuity of gold mineralisation at the Duchess of York Prospect, Mount Monger
- High grade intercepts include:
  - **2m at 7.90 g/t Au from 43m** in MM26RC0009; and
  - **3m at 5.11 g/t, including 1m at 11.46 g/t from 3m** in MM26RC0012
- Further broad and significant intercepts include:
  - **19m at 1.48 g/t Au from 56m (incl. 5m at 2.04 g/t Au)** in MM26RC0010
  - **18m at 1.23 g/t Au from 8m (incl. 5m at 1.80 g/t Au)** in MM26RC0026
  - **8m at 2.14 g/t Au from 1m** in MM26RC0015
  - **25m at 1.00 g/t Au from 57m** in MM26RC0018
- Results build on the initial drilling success at Duchess of York
- Assays have now been received for 80% of the 2026 RC drill program, representing 2,180 of the 2,667 samples submitted
- Remaining assays from Evergold's maiden campaign are expected over the coming weeks

Evergold Director, Glenn Grayson, commented:

"What is exciting about these results is what they tell us about the scale of the opportunity at Duchess of York. Duchess of York is increasingly becoming the template for exploration across the broader Mt Monger Project. As our understanding of this system improves, so too does our confidence in applying the same geological model across a growing pipeline of regional targets. That makes our upcoming regional aircore program a pivotal next step, as for the first time, we'll be testing whether the geological setting that is proving successful at Duchess is repeated elsewhere across the project. Our objective isn't simply to grow one discovery, but to uncover multiple discoveries across the gold system at Mt Monger."

Evergold Minerals Limited (ASX: EG1) ("Evergold" or "the Company") reports further assay results from its 2026 reverse circulation (RC) drilling program at the Duchess of York Prospect within the Mt Monger Gold Project ("Mt Monger"), located approximately 70 km southeast of Kalgoorlie in Western Australia. Assays have now been received for approximately 80% of the program, representing 2,180 of the 2,667 samples submitted. Assays for the remaining samples, including the Company's maiden RC drilling at the Gladiator Prospect, are expected over the coming weeks.

The new results build on the initial drilling success, continuing to confirm a broad, structurally controlled gold system at Duchess of York, with mineralisation intersected from surface to depths exceeding 100 metres.

Duchess of York RC Drilling Confirms Scale and Continuity

The 2026 RC drilling program continues to demonstrate the scale and continuity of gold mineralisation at Duchess of York. The results confirm broad zones of structurally controlled gold mineralisation at Duchess of York, extending from surface to depths exceeding 100 metres. The results are highlighted by high-grade intercepts of 2m at 7.90 g/t Au from 43m in MM26RC0009 and 3m at 5.11 g/t from 3m in MM26RC0012. 2m at 7.90 g/t is the highest-grade intersection returned from the program to date.

With approximately 80% of assays now received, each batch continues to strengthen the Company's understanding of the Duchess of York gold system. Drill hole locations are shown in *Figure 1*, with representative cross-sections provided in *Figures 2 - 4*. Significant intercepts are summarised in *Table 1*, with drill hole collar details provided in *Table 2*.

The 2026 RC drilling program was designed to test the down-dip and along-strike extensions of known gold mineralisation within the Gladiator Fault corridor, where mineralisation is spatially associated with a felsic (sanukitoid) intrusive. This geological setting forms the basis of the Company's exploration model across the Mt Monger camp.

The latest results, covering twelve additional RC drill holes (MM26RC0008–0012, 0014–0018, 0023 and 0026) further strengthen confidence in the scale and continuity of the Duchess of York gold system. Shallow mineralisation was intersected in MM26RC0016 (12m at 1.19 g/t Au from surface) and MM26RC0015 (8m at 2.14 g/t Au from 1m), while MM26RC0010 (19m at 1.48 g/t Au from 56m) and MM26RC0026 (18m at 1.23 g/t Au from 8m) returned broad mineralised zones consistent with the widths reported on 24 June 2026[1]. MM26RC0014 ended in mineralisation, with the final metre returning 1.15 g/t Au (104–105m), indicating the system remains open at depth.

Duchess of York Geological Setting

Duchess of York is Evergold's most advanced prospect within the Mt Monger Gold Project. Gold mineralisation is interpreted to be associated with the emplacement of a felsic, sanukitoid-affinity intrusive adjacent to the Gladiator Fault, with this intrusion-related setting mirroring the dominant controls on gold mineralisation throughout the Mt Monger district.

Historical drilling returned high-grade and wide gold intercepts from near surface to approximately 118m depth, including 3m at 17.6 g/t Au from 13m (YDC014) and 20m at 2.87 g/t Au from 56m (YDC135)[4]. Initial results from the 2026 RC program, reported on 24 June 2026[5], confirmed multiple broad zones of gold mineralisation extending below previous drilling, including 22m at 1.80 g/t Au from 59m (incl. 8m at 3.38 g/t Au) in MM26RC0024. Together with the initial results reported on 24 June 2026[5], the latest drilling continues to indicate the mineralised system is broader and flatter-lying than previously interpreted, with mineralisation remaining open down-dip.

Mt Monger Gold Project Overview

The Mt Monger Gold Project, located approximately 70 km southeast of Kalgoorlie, covers a contiguous landholding along, a major regional structural corridor known to host significant gold mineralisation. Evergold controls several key prospects including Duchess of York, Hickman's Find, Red Dale North, Kiaki Soaks, and the recently identified Gladiator Prospect, all positioned along this highly prospective corridor within one of Western Australia's premier gold districts. The project is strategically located close to existing mining and processing infrastructure, including Vault Minerals' 1.2 Mtpa Randalls Gold Mill, located less than 5km from the project, with additional processing facilities at Jubilee, St Ives and Lakewood all within 50km.

Mt Monger Resources Prospectus, May 2021; ASX Announcement "Detailed Assays Confirm Significant Gold Intersection in Drilling at Mt Monger", dated 21 October 2022. Appendix 3 has been extracted from the aforementioned releases

[5] EG1 ASX Announcements, "Duchess of York Delivers Broad Gold Intercepts as Mineralisation Extends at Depth", dated 24 June 2026

Craig's Rest, Leonora – Regional Soil Survey Completed

Evergold has completed a regional soil geochemical survey at the Craig's Rest Prospect ("Craig's Rest") within its wholly owned Leonora Goldfields Project, with 1,320 soil samples collected and submitted to Intertek Genalysis for multi-element analysis. Assay results are expected within four to six weeks.

The survey is designed to define geochemical gold dispersion associated with the Wonder and Black Cat structures - two priority structural targets that remain largely untested - and generate ranked targets for follow-up exploration. Results will be integrated with historical drilling and the planned high-resolution drone magnetic survey to refine the Company's understanding of the structural controls on mineralisation and identify new gold targets across the project.

The Leonora Goldfields Project hosts a JORC 2012 Inferred Mineral Resource of 63,000 oz Au, including 48,600oz Au at Craig's Rest (1.096 Mt at 1.38 g/t Au)[6], providing a strong foundation for ongoing regional exploration.

Next Steps

Evergold continues to advance its systematic exploration programs at Mt Monger and Leonora. Near-term activities include:

- Commencement of the regional aircore drilling program at Mt Monger, scheduled to begin in approximately two weeks
- Completion and interpretation of the high-resolution drone magnetic survey at Craig's Rest, Leonora Goldfields Project
- Phase 2 RC drilling at Duchess of York to test the down-dip, along-strike and offset extensions of gold mineralisation
- Commencement of EIS co-funded diamond drilling at the Gladiator Prospect, Mt Monger

This announcement is approved for release by the Board of Evergold Minerals Limited.

ABOUT EVERGOLD MINERALS

Evergold Minerals Limited (ASX: EG1) is an Australian exploration company focused on discovering and developing gold projects across Australia. The Company currently holds the Leonora Goldfields Project and the Mt Monger Gold Project in Western Australia's Goldfields region, along with the Bynoe Project in the Northern Territory. Evergold is actively evaluating and pursuing additional high-quality gold exploration opportunities to enhance and diversify its project portfolio.

Competent Person's Statement

The information in this release that relates to Exploration Results is based on information compiled by Glenn Grayson who is a Member of the Australian Institute of Mining and Metallurgy (AusIMM). Mr Grayson has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Grayson consents to the inclusion in the release of the matters based on his information in the form and context in which it appears.

Forward Looking Statements

This announcement may contain certain forward-looking statements and projections. Such forward-looking statements/projections are estimates for discussion purposes only and should not be relied upon. Forward-looking statements/projections are inherently uncertain and may therefore differ materially from results ultimately achieved. Evergold Minerals Limited does not make any representations and provides no warranties concerning the accuracy of the projections and disclaims any obligation to update or revise any forward-looking statements/projections based on new information, future events or otherwise except to the extent required by applicable laws.

Listing Rule 5.23.2

In respect of this announcement, where EG1 has referred to, or referenced, prior ASX market announcements, EG1 confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcement (unless otherwise stated) and, in the case of estimates of mineral resources or ore reserves, that all material assumptions and technical parameters underpinning the estimates in the prior relevant market announcement continue to apply and have not materially changed.

APPENDIX 1 – JORC Code, 2012 Edition – Table 1

Section 1 – Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	*Nature and quality of sampling. Include reference to measures taken to ensure sample representivity. Aspects of determination of mineralisation that are Material to the Public Report.*	RC drilling produced a continuous [1 m] interval sample. Samples were collected at the rig from a cyclone via a [cone / riffle] splitter, yielding a representative [2–3 kg] sub-sample per metre. Sampling is industry standard for the style of mineralisation and the stage of exploration. Historical results referenced are based on prior explorers' RC, aircore, RAB, auger and vacuum drilling as described in WAMEX reports. Exploration results are based on historical drilling completed by previous explorers across the Mt Monger Project area. Sampling techniques included reverse circulation (RC), aircore (AC), rotary air blast (RAB), auger and vacuum drilling methods as described in historical WAMEX reports. Sampling methodologies were appropriate for the style of mineralisation being tested at the time and are considered industry standard for reconnaissance to early-stage gold exploration. 2026 Geochemical Survey: A total of 489 soil samples were collected across the Mt Monger Gold Project between 20 and 25 February 2026. holes were drilled to depths of 0.5 m to 1.0 m using a LV-mounted drill rig operated by Gyro Drilling. Samples of approximately 200–300 g of soil/regolith material were collected from the bottom of each hole into pre-numbered calico bags. Samples were submitted to Intertek Genalysis (Perth) for multi-element analysis by aqua regia digestion with ICP-MS finish (method AR10/MS33). Sampling was carried out under Evergold's standard protocols and is considered industry standard for near-surface geochemical exploration.
Drilling techniques	*Drill type and details.*	RC drilling was completed by K-Drill using a [truck -mounted] rig with a face-sampling hammer and a [5.25 inch / 140 mm] bit. Holes were drilled [inclined at -60°] to [270 or 90degree azi No diamond tails were drilled in this program. Historical drilling was undertaken using a combination of RC percussion drilling, aircore drilling, RAB, auger and vacuum drilling techniques. RC drilling utilised face-sampling hammer bits, while air core and RAB drilling employed open-hole hammer systems. 2026 Geochemical Survey: conducted by Gyro Drilling using a LV-mounted auger rig (Rig 03). Holes were drilled vertically to depths of 0.5 m to 1.0 m depending on ground conditions. No casing was used. The technique is standard for near-surface soil geochemical sampling in the Eastern Goldfields. Holes were filled in immediately after mitigating ground disturbances.
Drill sample recovery	*Method of recording and assessing sample recoveries. Measures taken to maximise recovery. Whether a relationship exists between recovery and grade.*	RC sample recovery and condition (dry/moist/wet) were logged for each metre. Recoveries were generally excellent. The cyclone and splitter were cleaned between rods as required to minimise contamination and maximise recovery. No relationship between recovery and grade has been identified. No quantitative assessment of recovery versus grade has been reported in the historical documentation.

For personal use only

For personal use only

Criteria	JORC Code explanation	Commentary
		2026 Geochemical Survey: Sample recovery was visually assessed at each site. Recovery was generally good in residual soil and weathered regolith profiles. Some sites in transported cover returned lower volumes. No relationship between sample recovery and gold grade has been established for this dataset.
Logging	*Whether samples have been geologically logged. Whether logging is qualitative or quantitative. Total length and percentage logged.*	RC percussion samples were logged geologically on a one metre interval basis. All holes and all relevant intersections were geologically logged in full. 2026 Geochemical Survey: Each sample site was logged for soil colour, HCl reaction (calcium carbonate presence), sample depth and general comments on terrain/vegetation. Logging was qualitative and appropriate for reconnaissance-level soil geochemistry. All 628 sites were logged.
Sub-sampling techniques and sample preparation	*If non-core, whether riffled, tube sampled, rotary split. Nature, quality and appropriateness of sample preparation. QAQC procedures adopted.*	RC samples were split at the rig using a cone splitter to produce a 2–3 kg sub-sample, collected [predominantly dry]. At Intertek Genalysis, samples were dried, crushed and pulverised to [85% passing 75 µm] with a representative sub-sample taken for assay. Sample sizes are considered appropriate for the grain size of the material being sampled. Sample preparation typically involved drying, crushing and pulverizing to industry-standard specifications prior to assay. 2026 Geochemical Survey: samples were collected directly from the ground into calico bags without sub-sampling in the field. At Intertek Genalysis, samples were dried, sieved to a nominal -80# (-180 µm) fraction, and a representative sub-sample taken for analysis. Sample preparation is considered appropriate for soil geochemical analysis. Laboratory internal QAQC procedures applied to this program.
Quality of assay data and laboratory tests	*Nature, quality and appropriateness of assaying and laboratory procedures. QAQC procedures and whether acceptable levels of accuracy and precision have been established.*	RC Samples: Gold was determined by 50 g fire assay at Intertek Genalysis, a NATA-accredited laboratory (ISO 17025). The technique is considered total for gold. 4% QAQC insertion plus Laboratory internal QAQC — CRMs, blanks and duplicates — was applied. Gold assays were historically completed using fire assay techniques, typically with a 30 g or 50 g charge and AAS or ICP finish. 2026 Geochemical Survey: Gold was analysed as part of the Intertek Genalysis AR10/MS33 package — an aqua regia digestion (10 g charge) with ICP-MS finish for a 33-element suite including gold. Intertek Genalysis is a NATA-accredited commercial laboratory (ISO 17025). Laboratory internal QAQC procedures including certified reference materials (CRMs), blanks and duplicates were applied as part of standard analytical protocols. No material QAQC failures were identified.
Verification of sampling and assaying	*Verification of significant intersections. Use of twinned holes. Documentation of primary data. Discuss any adjustment to assay data.*	RC Drilling: Significant intercepts have been reviewed by the Competent Person. No twin holes were drilled. Assay data was imported directly from Intertek Genalysis certificate files and validated against field and logging records. No adjustments have been made to assay data. 2026 Geochemical Survey: Results have been reviewed by the Competent Person. Digital data was imported directly from Intertek Genalysis certificate files and validated against field records. No adjustments to assay data have been made.
Location of data points	*Accuracy and quality of surveys used to locate drill holes. Specification of grid system. Quality of topographic control.*	Mt Monger: Drill hole collar locations were recorded using handheld GPS by previous explorers. Coordinate systems reported include MGA Zone 51, GDA94 or earlier equivalent datums. 2026 RC Drilling: Drill hole collar locations reported for the first time in this announcement were surveyed by DGPS following completion of drilling. Coordinates and elevations are reported in GDA2020, MGA Zone 51, with positional accuracy considered appropriate for the reporting of Exploration

For personal use only

Criteria	JORC Code explanation	Commentary
		Results. MM26RC0023 collar details are as previously reported. 2026 Geochemical Survey: Auger sample locations were recorded using a handheld GPS unit with accuracy of approximately ±3–5 m. Coordinates are reported in GDA2020/MGA Zone 51. Elevation data is GPS-derived. Positional accuracy is considered adequate for reconnaissance soil geochemistry.
Data spacing and distribution	*Data spacing for reporting of Exploration Results. Whether sufficient for Mineral Resource estimation. Whether sample compositing has been applied.*	RC Drilling: Holes were drilled on sections spaced approximately 20 m apart, with holes at variable spacing along section. The data spacing is appropriate for testing structural continuity at this stage. No sample compositing has been applied. 2026 Geochemical Survey: Samples were collected on east-west traverses at a nominal 50 m spacing along lines spaced approximately 200 m apart. The survey covered approximately 3.6 km (east-west) by 3.7 km (north-south). Data spacing is appropriate for regional geochemical reconnaissance and target generation but is not sufficient for Mineral Resource estimation. No sample compositing was applied; each sample represents a single auger hole.
Orientation of data in relation to geological structure	*Whether orientation of sampling achieves unbiased sampling of possible structures.*	RC Drilling: The dominant structural grain at Duchess of York trends approximately north–south. Holes were oriented [approximately perpendicular to strike] to intersect mineralisation close to true width and to minimise sampling bias. Reported intervals are downhole; true widths are not yet confirmed. 2026 Geochemical Survey: Samples were collected on east-west traverses. The dominant structural grain at Mt Monger trends north-south, so east-west traverses provide reasonable cross-strike coverage. Surface geochemical sampling is not expected to introduce significant orientation bias.
Sample security	*Measures taken to ensure sample security.*	Mt Monger: Sample security procedures were managed by previous explorers. 2026 Geochemical Survey: Sample chain of custody was managed by Gyro Drilling field staff. Samples were transported directly from the field to Intertek Genalysis' Kalgoorlie laboratory depot by Gyro Drilling personnel. Samples were stored securely at all times during transport.
Audits or reviews	*Results of any audits or reviews of sampling techniques and data.*	No external audits or reviews of historical sampling techniques or assay data have been reported. Historical datasets have been reviewed internally by Evergold Minerals. 2026 Geochemical Survey: No external audit has been completed. Data has been reviewed internally by the Competent Person and validated against laboratory certificates and field records.

For personal use only

Section 2 – Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	*Type, reference name/number, location and ownership. Security of tenure and known impediments.*	Mt Monger: Results relate to exploration conducted on tenements P25/2825, P25/2829, P25/2835, P25/2836, P25/2840, P25/2877, P26/4764, P26/4779, P26/4780, P26/4781, P26/4782, P26/4783, P26/4784, P26/4785, P26/4786, P26/4787, P26/4788, P26/4793, P26/4794, P26/4795, P26/4796, P26/4797, P26/4818, P26/4819, P26/4820, P26/4840, P26/4841, P25/2878, and P26/4844. The tenements are held 100% by Complete Prospecting Pty Ltd. The tenements are held securely and no impediments to obtaining a licence to operate have been identified.
Exploration done by other parties	*Acknowledgment and appraisal of exploration by other parties.*	Gold mining in the Mt Monger area commenced in the late 1890s and continues to the present day. Previous explorers include Solomon (Australia), Silver Lake Resources, Gutnick Resources NL, AngloGold, Cortona Resources, Torian Resources, Lefroy Exploration, Black Cat Syndicate and others. Programs included auger and soil geochemistry, RAB/AC/RC/diamond drilling, geological mapping and geophysical surveys.
Geology	*Deposit type, geological setting and style of mineralisation.*	Mt Monger: The Mt Monger Project is prospective for orogenic gold mineralisation hosted within Archean greenstone sequences of the Eastern Goldfields Superterrane. Mineralisation is structurally controlled and associated with shear zones, fold hinges and lithological contacts. The 2026 ground gravity survey has identified linear density contrasts at the Gladiator Prospect interpreted as structural or lithological boundaries that may have acted as fluid pathways for gold-bearing hydrothermal fluids. The Gladiator geochem anomaly lies within the central structural corridor. 【RED: reference to regional shear zone removed from carried-over commentary per standing instruction — confirm final wording】
Drill hole Information	*A summary of all information material to the understanding of the exploration results.*	All material information is summarised in Tables and Figures included in the body of the announcement and in Appendix I (Full Geochem Results).
Data aggregation methods	*Weighting averaging techniques, grade truncations, cut-off grades. Procedure for aggregation of short high-grade and longer low-grade intervals. Assumptions for metal equivalents.*	Mt Monger: Length-weighted average grades are reported for drilling results. No maximum grade truncations have been applied. No metal equivalent values have been reported. 2026 Geochemical Survey: Individual point sample results are reported. No data aggregation, compositing, or grade truncation has been applied. Each result represents a single sample from a single hole. Anomaly thresholds are defined as ≥40 ppb Au (anomalous) and ≥70 ppb Au (significantly anomalous). Results are reported in parts per billion (ppb) gold.
Relationship between mineralisation widths and intercept lengths	*These relationships are important for reporting Exploration Results. If geometry is not known, a clear statement should be made.*	Down hole lengths are reported for drilling results; true widths are not known. 2026 Geochemical Survey: Not applicable. geochemistry samples surface/near-surface soil material and does not provide information on the width or geometry of bedrock-hosted mineralisation. Anomaly dimensions reported reflect the spatial extent of surface geochemical dispersion.
Diagrams	*Appropriate maps and sections (with scales) and tabulations of intercepts.*	All appropriate diagrams including Drilling sample location maps colour-coded by gold result, geology base layer, sections, and regional location maps are included in the body of this report.

Criteria	JORC Code explanation	Commentary
Balanced reporting	*Where comprehensive reporting is not practicable, representative reporting of both low and high grades should be practiced.*	Comprehensive reporting of all 1,600 assay results is provided in Appendix 2. Significant intercepts are highlighted in Table 1. Summary statistics are provided in the body of the announcement.
Other substantive exploration data	*Other exploration data if meaningful and material.*	A high-resolution ground gravity survey was completed concurrently with the geochem program by Haines Surveys, processed by Southern Geoscience Consultants. Results are discussed in the body of the announcement and provided as Appendix II. 2026 Ground Gravity Survey: A high-resolution ground gravity survey was completed across the Mt Monger Gold Project by Haines Surveys at a nominal 100 m x 100 m station spacing. Data was processed by Southern Geoscience Consultants (SGC) using AAGD07 gravity datum and GRS80 ellipsoid heights. Bouguer anomaly correction densities of 2.67 g/cm³ and 2.80 g/cm³ were applied. Residual anomaly was calculated by subtracting an 800 m upward-continued Bouguer anomaly grid from the original. The survey has been merged with two open-file datasets (A090579 and A092264, 2010). Products include Bouguer anomaly, 1VD, THD, tilt angle, and residual grids. All data delivered in GDA2020/MGA Zone 51.
Further work	*Nature and scale of planned further work. Diagrams highlighting areas of possible extensions.*	Further work is presented in the 'Next Steps' section of the ASX Release Body.
