Important information and Disclaimers

This presentation has been prepared by Lodestar Minerals Limited (Lodestar). The information contained in this presentation is a professional opinion only and is given in good faith. Certain information in this document has been derived from third parties and though Lodestar has no reason to believe that it is not accurate, reliable or complete, it has not been independently verified or audited by Lodestar.

Forward Looking Statements

This document contains forward looking statements concerning the Company. Forward-looking statements are not statements of historical fact, and actual events and results may differ materially from those described in the forward-looking statements as a result of a variety of risks, uncertainties and other factors. Forward-looking statements are inherently subject to business, economic, competitive, political and social uncertainties and contingencies. Many factors could cause the Company's actual results to differ materially from those expressed or implied in any forward-looking information provided by the Company, or on behalf of the Company. Such factors include, among other things, risks relating to additional funding requirements, metal prices, exploration, development and operating risks, competition, production risks, regulatory restrictions, including environmental regulation and liability and potential title disputes. Forward looking statements in this document are based on the Company's beliefs, opinions and estimates of the Company as of the dates the forward-looking statements are made, and no obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments. Although management believes that the assumptions made by the Company and the expectations represented by such information are reasonable, there can be no assurance that the forward-looking information will prove to be accurate. Forward-looking information involves known and unknown risks, uncertainties, and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any anticipated future results, performance or achievements expressed or implied by such forward-looking information. Such factors include, among others, the actual market price of commodities, the actual results of future exploration, changes in project parameters as plans continue to be evaluated, as well as those factors disclosed in the Company's publicly filed documents. Readers should not place undue reliance on forward-looking information. The Company does not undertake to update any forward-looking information, except in accordance with applicable securities laws. No representation, warranty or undertaking, express or implied, is given or made by the Company that the occurrence of the events expressed or implied in any forward-looking statements in this presentation will actually occur.

Lodestar makes no representation or warranty as to the accuracy, reliability or completeness of information in this document and does not take responsibility for updating any information or correcting any error or omission which may become apparent after this document has been issued. To the extent permitted by law, Lodestar and its officers, employees, related bodies corporate and agents (Agents) disclaim all liability, direct indirect or consequential (and whether or not arising out of the negligence, default or lack of care of Lodestar (and/or any of its Agents) for any loss or damage suffered by a Recipient or other persons arising out of, or in connection with, any use or reliance on this presentation or information.

This Presentation may not be reproduced in whole or in part, nor may any of its contents be divulged to any third party without the prior consent in writing of the Company. The distribution of this Presentation (including an electronic copy) in the United States and elsewhere outside Australia is restricted by law. If you come into possession of this Presentation, you should observe such restrictions, including those set forth in the "International Offer Restrictions" of this Presentation. Any non-compliance with these restrictions may contravene applicable securities laws. Refer to "International Offer Restrictions" of this Presentation for more information. By accessing this Presentation, you represent and warrant that you are entitled to receive this Presentation in accordance with the restrictions, and agree to be bound by the limitations, contained within it.

Financial data

All dollar values are in Australian dollars (A\$ or AUD) unless otherwise stated. The information contained in this Presentation may not necessarily be in statutory format. Amounts, totals and change percentages are calculated on whole numbers and not the rounded amounts presented.

Competent Persons Statement

The information in this report that relates to Exploration Targets and Exploration Results is based on information compiled by: Ms Coraline Blaud (MAIG), who is a CEO and Director of Lodestar Minerals Limited and Mr Fionnlagh (Finn) Hunter (MAUSIMM), who is a Geological Consultant. Ms Blaud and Mr Hunter each have sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for the reporting of Exploration Results, Mineral Resources and Ore Reserves". Ms Blaud and Mr Hunter consent to the inclusion in the report of the matters based on their information in the form and context in which it appears. The information in this announcement that relates to previously released exploration results was disclosed under JORC 2012 in the ASX announcements dated:

- **Lodestar Minerals ASX Announcement 15th December 2025**
- **Lodestar Minerals ASX Announcement 2nd February 2026**
- **Lodestar Minerals ASX Announcement 23rd February 2026**
- **Lodestar Minerals ASX Announcement 12th March 2026**
- **Lodestar Minerals ASX Announcement 18th March 2026**
- **Lodestar Minerals ASX Announcement 11th May 2026**
- **Lodestar Minerals ASX Announcement 12th May 2026**
- **Lodestar Minerals ASX Announcement 16th July 2026**
- **Lodestar Minerals ASX Announcement 20th August 2026**
- **Lodestar Minerals ASX Announcement 28th August 2026**
- **Lodestar Minerals ASX Announcement 24th September 2026**

These announcements are available to view on the Lodestar website. The company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

BOARD OF DIRECTORS & SENIOR MANAGEMENT

Non-Executive Chairman

Ross Taylor

Finance professional with extensive experience in global investment banking and financial markets.

Senior positions with Deutsche Bank, Bankers Trust and Barclays Capital.

CEO & Executive Director

Coraline Blaud

Geologist with 10+ years' experience in the junior exploration mining sector

Proven expertise in discovering, developing, and advancing natural resource assets across diverse commodities and global jurisdictions.

Non-Executive Director

Jillian Terry

Geologist with more than 30 years experience in the exploration and mining sector with various technical management roles throughout Australia, Chile, PNG and Laos.

For personal use only

USA Team

Exploration Manager - US

Finn Hunter

Geologist with expertise in economic Rare Earth Elements (REE) systems, particularly HREE.

Worked as a technical lead on Carbonatite, Unconformity-Related and Pegmatite-hosted REE systems across global jurisdictions.

REE Specialist Consultant

Robin Wilson

Consultant with over 35 years' experience in REE, copper, gold and uranium.

Former Exploration Manager who led the team that discovered the Browns Range HREE deposits in North Australia.

REE Specialist Consultant

Ross Chandler

Consultant with a PhD in Economic Geology and Geochemistry (ANU), and focus on studying REE mineral systems in Australia and globally.

Co-discovered the Yun REE deposits (WA) and recipient of the 2023 AMEC Prospector of the Year award.

Chile Team

Exploration Manager - Chile

Gonzalo Henriquez

Chilean geologist with 20+ years of experience on mineral exploration combined with applied geoscience, specialist on magmatic-hydrothermal mineral deposits.

Lead exploration programs in companies such as SRK, BHP and EPG Partners, exploring for base and precious metals in Chile.

WA Team

Exploration Manager - WA

Karl Weber

Geologist with over 30 years experience in gold, base metal, uranium and REE exploration within Australia and Internationally.

He has held technical and management positions with private and ASX listed companies in Australia and Brazil.

Virgin Mountain Heavy Rare Earths Project, USA

- Heavy rare earth focus - Prospective for dysprosium, terbium and lutetium
- High-grade rock chips - Sampling has returned up to 14.68% TREO¹, with heavy rare earth oxides comprising up to 64% of the contained rare earths.
- Favourable mineralogy - HREE hosted in xenotime
- Tier-1 jurisdiction - Mohave County, Arizona - ranked 5th in the world for mining investment attractiveness (Fraser Institute, 2026)
- Established infrastructure - The Mountain Pass rare earth processing facility within around two hours by road
- District-scale upside - Mineralised structure mapped over approximately 5 km remains largely untested by modern exploration.

Ned's Creek Gold Project, Western Australia

- Maiden Mineral Resource Estimate (MRE) expected in October 2026
- Exploration Target of 250,000-300,000 oz Au (5-7 Mt at 1.0-1.7 g/t Au) defined in December 2025

Chile : Copper Portfolio

- Three Saints maiden drilling confirms large-scale Cu mineralised IOCG system
- Los Loros Cu-Mo & Au porphyry: new IP+MT geophysics completed March 2026 with 5 new Copper & Gold Targets identified ahead of maiden LSR drilling
- Pacifico Cu-Au-Mo porphyry: latest acquisition of a large underexplored porphyry in the Paleocene belt. Historical exploration shows the potential for a 6km trend of mineralized porphyry

“Strategic high-demand commodities in world-class mining jurisdictions”

Growing global footprint in high grade critical minerals and precious metals

Virgin Mountain Heavy Rare Earth Project

*Strategic HREE Exposure
in Arizona, USA*

For personal use only

U.S. critical minerals move from policy to procurement

2026 POLICY
MOMENTUM

02 FEBRUARY 2026

US\$12bn

Trump launches Project Vault

A strategic reserve of rare earths and other critical minerals, backed by up to US\$10bn of EXIM financing and ~US\$1.67bn of private capital, to reduce China-linked supply risk.

20 JULY 2026

EO 14415

Domestic sourcing tightened

The Executive Order restricts defense-procurement waivers, maps supply chains from raw material to end use, and accelerates qualification of domestic and allied suppliers.

24–25 AUGUST 2026

NEVADA

Supply security led the agenda

The Governor's annual Elements of Change Summit centred on federal policy, critical-minerals defense, permitting and domestic supply chains. Postponed following the Hawk Fire; rescheduling pending.

VIRGIN MOUNTAIN POSITIONING

A U.S.-based HREE project sits within a strengthening national-security and domestic-supply narrative.

Virgin Mountain Rare Earths Project

Prime Jurisdiction and Neighbouring Projects

- Border of Nevada and Arizona, proximal to the world-class Mountain Pass Rare Earth Element (REE) producing mine (**12.15 Mt @ 4.79% Total Rare Earth Oxide (TREO)**) (MP Materials Inc; MP:NYSE; US\$10b market cap).

Tier-1 jurisdiction - Mohave County, Arizona - **ranked 5th in the world for mining investment attractiveness** (Fraser Institute, 2026) with fast drill permitting and minimal operating taxes.

Arizona is a mining-friendly jurisdiction with long-standing, productive mining districts.

Virgin Mountain mineralisation contains significantly higher HREE than other domestic US projects – Dysprosium, Terbium and Lutetium are repeatedly identified by US agencies as critically undersupplied with severe foreign supply exposure, making new domestic HREE sources strategically vital.

Regional-scale view of Project Location, including National reference map

Virgin Mountain Rare Earths Project

Structural Host and Focus

- Virgin Mountain is focused on a **5 km shear zone** **historically mapped by USGS**, 3 km of this has been captured by 33 mineral claims (682 acres / 2.8 KM²)¹

The host is a Paleoproterozoic gneissic shear zone similar in age to the Mojave region mineralisation with **geological characteristics comparable to the Music Valley REE Project (Dateline Resources ASX: DTR)**.

Ground teams have determined metasomatic REE-enriched fluid has intruded the shear zone, resulting in **HREE-enriched xenotime dominant mineralisation**².

The area was explored during the 1990s ASARCO, which sunk three shafts of 85 feet into suspected uranium mineralisation on the project. Correspondence indicates **'an anomalous structure' intersected at depth**.

Project-scale view of the Virgin Mountain Project with Geology Overlay

¹ Refer to Lodestar Minerals ASX Announcement 12th May 2026

² Refer to Lodestar Minerals ASX Announcement 18th March 2026

Virgin Mountain Rare Earths Project

TREO Grade and Tenor

- Initial rock sampling undertaken by Lodestar^{2,3} returned the following results:

- NGR051: **14.68% TREO, 59% HREO**
- CA050: **3.73% TREO, 48% HREO**
- CA052: **1.81% TREO, 58% HREO**
- CA049: **1.67% TREO, 62% HREO**
- NGR050: **1.48% TREO, 54% HREO**
- CA053: **1.41% TREO, 64% HREO**
- NGR048: **1.39% TREO, 57% HREO**
- CA051: **1.00% TREO, 50% HREO**

These samples followed a continuous trend which could be followed for 275 metres within the mapped shear zone.

- Ground-based scintillometre work is promising but **require airborne radiometric follow-up** for project-scale capture of HREE mineralisation trend.

Prospect-scale view of the Virgin Mountain Project with the Company's surface sample results

² Refer to Lodestar Minerals ASX Announcement 23rd February 2026

³ Refer to Lodestar Minerals ASX Announcement 16th July 2026

Virgin Mountain Rare Earths Project

TREO Grade and Mineralogy

- Metasomatic fluid was found to have enriched multiple beds within the Paleoproterozoic gneissic host rock ranging from **1 – 14% TREO** and **48 – 64% HREO**⁴.

Systematic sample results over the Humingbird Outcrop

- Xenotime** contains a high proportion of **dysprosium, terbium and lutetium**, high value HREEs. All three of these elements are identified by agencies in the USA as critically undersupplied with severe exposure to foreign supply.
- Xenotime is one of the only HREE-dominant minerals with a proven commercial processing pathway.**

⁴ Refer to Lodestar Minerals ASX Announcement 23rd February 2026 & 16th July 2026

Next Steps to unlocking a strategically significant US asset...

- For personal use only
- **High-resolution radiometric survey:** The limitation for mapping of the shear at surface is the shallow alluvial cover and the manual effort of Ground-based scintillometer work. A high-resolution radiometric survey over the trend will highlight U/Th targets for investigation.
 - **Field follow-up of targets:** Targets identified by high-resolution radiometrics should be followed-up on the ground. This will allow for development of drilling targets, an improved understanding of structural components prior to drilling.
 - **Structural assessment:** A critical step would be to complete a structural assessment. Ensuring drillhole planning has the best chance for success.
 - **Drilling permitting:** will be progressed in parallel with the above.
 - Further work may also include a dedicated **metallurgical test work** programme. Mineral studies offer positive indicators for follow-up.

Project-scale view of the Virgin Mountain Project with Geology Overlay

Ned's Creek Project

Gold in Western Australia

For personal use only

Ned's Creek Gold Project

Maiden resource on-track, clear exploration upside and next steps

✓ Late October 2026 | Maiden MRE

Finalise geological and grade modelling and deliver the initial Mineral Resource Estimate for Ned's Creek.

✓ Early CY2027 | Mining Lease application

Environmental, heritage and technical studies, including metallurgical test work, underway to support the planned application.

✓ Further exploration | Resource growth potential

Test additional mineralisation beyond the published Exploration Target and extensions along strike and at depth.

✓ Prime location | Established WA gold region

40km east of Catalyst Metals' Plutonic mine and plant; within trucking distance of Westgold's Blue Bird plant near Meekatharra.

Ned's Creek: location relative to the Plutonic mine and plant

Ned's Creek Gold Project, WA

100% owned | Maiden gold resource targeted for late October

Resource drilling complete; supports exploration target

12,417m across 106 RC holes at Gidgee Flat, Contessa and Central Park; all assays, resamples and QAQC re-assays received.

Maiden MRE: the next key milestone

Geological modelling nearing completion, with the maiden Mineral Resource Estimate targeted for the second half of October 2026.

Published Exploration Target⁵

250,000–300,000oz Au in the range of 5–7Mt at 1.0–1.7g/t Au

Clear growth beyond the initial resource footprint

Mineralisation remains open along strike and at depth across all three prospects.

Ned's Creek Project 2026 Brownfields Drilling progress plan view

The potential quantity and grade of the Exploration Target is conceptual in nature. There has been insufficient exploration to estimate a Mineral Resource and it is uncertain whether further exploration will result in the estimation of a Mineral Resource.

⁵ Exploration Target: ASX 18 December 2025. Project update: ASX 24 September 2026.

Gidgee Flat | High-grade gold and depth extension potential

Drilling has extended mineralisation and improved geological confidence across oxide and fresh rock zones.

Best gold intersections include:⁶

6m @ 7.16g/t Au from 140m; incl. 1m @ 35.34g/t Au from 142m (LNRC125)

7m @ 4.69g/t Au from 214m; incl. 2m @ 15.29g/t Au from 219m (LNRC153)

11m @ 2.33g/t Au from 20m (LNRC132)

18m @ 1.74g/t Au from 57m (LNRC159)

Modelling will guide future drilling to test extensions at depth.

Gidgee Flat: 2026 drilling results and interpreted mineralised zones

⁶ ASX 24 September 2026. Intersections are downhole lengths; true widths are not established.

Central Park & Contessa | Shallow gold and further upside

Central Park: broad, shallow gold oxides⁷

Resampling confirms gold mineralisation, with further shallow oxide potential to the west.

- 26m @ 1.57g/t Au from 51m; incl. 3m @ 5.08g/t Au from 69m (LNRC210)
- 11m @ 2.96g/t Au from 36m incl. 3m @ 8.78g/t Au from 43m (LNRC196)
- 21m @ 1.08g/t Au from 18m (LNRC200)

Contessa: shallow gold intersections⁶

- 3m @ 2.73g/t Au from 41m (LNRC173)
- 2m @ 3.39g/t Au from 45m (LNRC168)

Plan view of Central Park 2026 drilling.

⁷ ASX 24 September 2026. Intersections are downhole lengths; true widths are not established.

For personal use only

Chilean Portfolio

Copper Exploration

Chile: A Tier 1 IOCG & PCDs Jurisdiction

Built on Decades of Discovery, Ready for the Next Copper Boom

Los Loros and Three Saints Projects sit within the Cretaceous Porphyry/IOCG belt which includes¹:

- Carmen de Andacollo (Teck Resources) – Porphyry Cu-Mo-Au
540 Mt @ 0.45% Cu & 0.25 g/t Au
- Candelaria (Lundin Mining) – IOCG
1.4 Bt @ 0.56% Cu & 0.12 g/t Au

Pacifico Project sit within the Paleocene Porphyry belt which includes¹:

- Relincho (Teck / Newmont JV) – Porphyry Cu-Mo
1.1 Bt @ 0.41% Cu & 0.021% Mo

¹ Refer to Appendix 1

Los Loros Cu-Mo Porphyry Project

Outcropping Porphyry Target located in Chile established mining regions

- Significant Cu-Mo porphyry system identified from outcrop mapping and historical drilling.

Historical exploration at Los Loros has been limited and sporadic. **New IP+MT and magnetometry surveys complete with five new Cu-Mo-Au targets** defined at the Águila Prospect ranging 150-800m depth².

Porphyry system overprinted by high-grade gold-bearing epithermal veins.

Key attributes that elevate Los Loros as a standout exploration opportunity include:

- Porphyry mineralisation exposed at surface, significantly reducing exploration risk and drilling depth requirements
- Demonstrated copper, molybdenum and gold endowment, confirmed by historical drilling
- Low altitude (~500m), with the project accessible all year round

Significant historical results at the Los Loros Project include³:

- **20m @ 3.67 g/t Au from 132m in LLO-02 – Inc 2m @ 33.83 g/t Au from 132m**
- **136m @ 0.20% CuEq⁴ from 134m to EOH in LLO-01**

² Refer to Lodestar Minerals ASX Announcement 11th May 2026

³ Refer to Lodestar Minerals ASX Announcement 2nd February 2026

⁴ See Appendix 2 for CuEq formula. CuEq was calculated using copper and molybdenum grades.

Three Saints IOCG Project

Maiden Holes Confirms Large-Scale IOCG System⁵

- Maiden Holes L3SRD003 (EOH 600m) & L3SDD004 (EOH 611m) display multiple intervals of chalcopyrite, pyrite, molybdenite and magnetite.
- Alteration in L3SRD003 transitions from chlorite-sericite at shallow depths to actinolite-magnetite alteration at depth, consistent with an the IOCG-style hydrothermal system.
- Annular magnetic “negative” anomaly confirmed as the surface expression of a mineralised IOCG-type system.
- Presents visible sulphides spatially associated with magnetite veins and breccias and strong skarn-type alteration (garnet, epidote, actinolite) typical of IOCG deposits in the Candelaria and Punta del Cobre district.
- Combined results from L3SRD003 and L3SDD004 provide a new geological and geochemical vectors to refine targeting beneath the extensive cover.
- Anomalous Cu-Co (1,314 ppm Cu and 404 ppm Co) mineralisation associated with sodic-Calcic/skarn alteration provides an additional exploration vector.

⁵ Refer to Lodestar Minerals ASX Announcement 12th March 2026 and 28 August 2026 and Appendix 2 for CuEq formula

Pacifico Cu-Mo Porphyry Project

A Cu-Mo-Au Porphyry Project in the Paleocene Metallogenic Belt

- Pacifico Project is a Cu-Mo-Au Porphyry project in the **Paleocene Porphyry Copper Belt**, which host major mine sites and advanced projects in Chile, such as: Sierra Gorda (KGHM, South32), Cerro Colorado and Spence (BHP), Mocha (Codelco) and **Relincho (Teck / Newmont JV)** - 42 km South.
- Existing infrastructures, with main access roads straight from the main Pan-American highway with two separate access roads and more than 42 km of existing tracks providing access across the project.
- Project with altitude ranging from ~1000m to 2,600m
- Available power lines along the main highway.
- Includes **3 historical drilling campaigns** for more than **8,000m of diamond drilling**, distributed in 16 drill holes between 250 m and 700 m depth (~500 m. average).

Pacifico Cu-Mo Porphyry Project

Strong potential based on integration of historical dataset

Historical information:

- 8,000m of drilling confirming the Cu-Mo(-Au) sulphide mineralisation at depth associated to several porphyry-units.
- The deepest drillhole (746m – drilled in the northern area by FQM) ends mineralised in a chlorite-sericite alteration
- Most of the drilling clustered at the 2 edges of the porphyry corridor, leaving the central area of the new consolidated project fully untested
- Historical assays confirmed Cu-Mo mineralisation with grades up to 0.67% Cu and 817 ppm Mo and up to 1.03% CuEq.
- 42km north of Relincho Porphyry Copper Deposit owned by Teck / Newmont JV with a proven and probable reserves of 1,55 Bt at 0.35% Cu and 0.016% Mo with a Measured Resources of 319 Mt at 0.19% Cu and 0.006% Mo (Teck Resources Limited , 2025)⁶

New targets:

NORTH: Most drilled area with **proven Cu-Mo mineralised porphyry until 700m depth**. Strong hydrothermal alteration visible at surface.

CENTRAL: Untested target showing a **swarm of porphyry fingers, at surface**, previously mapped as veins. The system is potentially more exposed and closer to surface.

SOUTH: **Anomalous in Cu, Mo and Au mineralised porphyry** drilled up to 500m depth with a strong argillic alteration.

Copper Equivalent Formula for Three Saints Project CuEq results

Copper Equivalent Formula = Cu % + Mo % x 6.321 + Au g/t x 1.000 + Co % x 4.040

Copper Equivalent calculation derived from the following parameters:

Metal prices in USD: Cu = \$6.3025/lb, Mo = \$40.02/lb, Au = \$4,261.0/t.oz , Co = \$56,290/t (Metal prices 9th June 2026)

There is no current metallurgical test work on the Three Saints Project, metallurgical recoveries are based on deposits with similar geological setting and mineralisation type in Chile:

Lundin Mining Corporation reported on their Technical Report for the Candelaria Copper Mining Complex, Chile dated 22nd February 2023, average recoveries of 93% copper and 72% gold. The Candelaria Mine is an IOCG-style ore body with mineralisation and alteration assemblage similar to the ones observed at the Three Saints Project.

Hot Chili reported their PFS on ASX Announcement date 27th March 2025 about their Costa Fuego Cu-Au Project average recoveries of 86% Cu and 70% Molybdenum.

Mantoverde IOCG mine, owned by Capstone Copper, is a Cu-Co IOCG system in the Coastal region of Chile, with a similar mineralisation than Three Saints are developing a cobalt recovery circuit but has not published cobalt recovery percentages. For Three Saints, a conservative recovery of 50% was assumed.

Three Saints copper equivalent formula is based on the recoveries from the Candelaria deposit metallurgical studies for 93% copper and 72% gold recoveries; the molybdenum recoveries are based on Costa Fuego recovery of 70%; and cobalt with a recovery of 50%.

Copper Equivalent Formula for Los Loros Project CuEq results

Copper Equivalent Formula = Cu % + Mo % x 6.0312 (Note that Au is not included in the CuEq)

Copper Equivalent calculation derived from the following parameters:

Metal prices in USD: Cu = \$5.0759/lb, Mo = \$30.614/lb (Prices 10th November 2025)

There is no current metallurgical test work on the Los Loros Porphyry, metallurgical recoveries are based on deposits with similar geological setting and mineralisation type in Chile: FMR, reported on ASX Announcement dated 16th June 2025 about their Llahuin project, a Copper-Gold-Molybdenum Porphyry, recoveries of copper varying between 75% Cu and 91% Cu with the weighted average of the results being 84% Cu, which is a typically acceptable commercial level. And recoveries of molybdenum varying between 14% and 56% Mo.

Hot Chili reported their PFS on ASX Announcement date 27th March 2025 about their Costa Fuego Cu-Au Project average recoveries of 86% Cu and 70% Molybdenum. Based on the recoveries from the Llahuin and Costa Fuego metallurgical studies, a recovery of 85% Cu and 40% Mo was used to calculate the CuEq (Cu + Mo) for the Los Loros Project. Historical exploration did not include CuEq calculations, these calculations have been completed using the relevant historical Cu and Mo results.
