Update on U.S. Plasma Collection Network

CSL Limited (ASX:CSL; USOTC:CSLLY) today announces an expansion of its relationship with Haemonetics Corporation. CSL expects to have completed the rollout of Haemonetics' latest generation plasmapheresis platform across its U.S. plasma collection centres by the end of 2027.

CSL has entered into an agreement with Terumo BCT, Inc., provider of the Rika system currently used by CSL, to support a smooth transition between the providers.

The transition to the Haemonetics platform is one of several measures underway to further increase CSL's plasma collection network efficiency.
