QUARTERLY REPORT

For period ending 30 September 2026

12 October 2026

Drilling for gold in three of WA's premier gold provinces

- **Paterson Province - Day Dawn Project**
  - **Phase 1 RC drilling program identified multiple high-grade lodes at Aurora and new reef-style mineralisation identified at Altus including[1]:**
    - **3 metres at 93.4 g/t Au from 9 metres in PDR0001**
    - **3 metres at 17.1 g/t Au from 17 metres in PDR0011**
    - **4 metres at 21.0 g/t Au from 27 metres in PDR0012**
    - **2 metres at 12.4 g/t Au from 149 metres in PDR0028**
    - **1 metre at 21.5 g/t Au from 24 metres in PDR0005**
  - **Phase 2 RC drill program completed – expanded from a planned 3,000 metres to 4,000 metres with results due in October 2026**
  - **Diamond drilling to commence in October 2026**
- **Yilgarn Province - Venus Project in the Murchison region**
  - **Heritage survey completed and cleared for drilling**
  - **Initial, 130 hole aircore drill program to be completed in early 2027**
- **Tanami Province - West Tanami Project**
  - **Large land position covering ~100km of strike of the Trans-Tanami gold corridor**
  - **Next phase of drilling to target granitoid hosted gold mineralisation at Jazz and test for high-grade shoots at Fremlins South**

Corporate

- **~$8M share placement to accelerate exploration programs at the Company's Western Australian Gold Projects which included strong support from major shareholders Gold Fields Limited and Vault Minerals Limited**
- **Cash reserves of ~$9 million at 30 September 2026**

Hamelin's Exploration Portfolio

Hamelin Gold ("Hamelin" or the "Company") holds a portfolio of exploration projects spanning three of Australia's most prolific gold mining districts — the Yilgarn, Tanami and Paterson provinces (see Figure 11). The Company is leveraging modern exploration techniques and innovative technologies to discover and develop large-scale / high value mineral systems. This report outlines the exploration activities undertaken across these projects during the quarter ended 30 September 2026.

Day Dawn Project (Paterson Province)

Hamelin's Day Dawn Gold Project covers an area of ~20 km², 10 km northwest of the +20 Moz Telfer gold-copper mine in Western Australia's Paterson Province (see Figure 1). Hamelin has completed a comprehensive review and reinterpretation of historical drilling data at Day Dawn and identified coherent, near surface zones of high-grade gold mineralisation at the Aurora, Sparrows and Pheonix prospects.

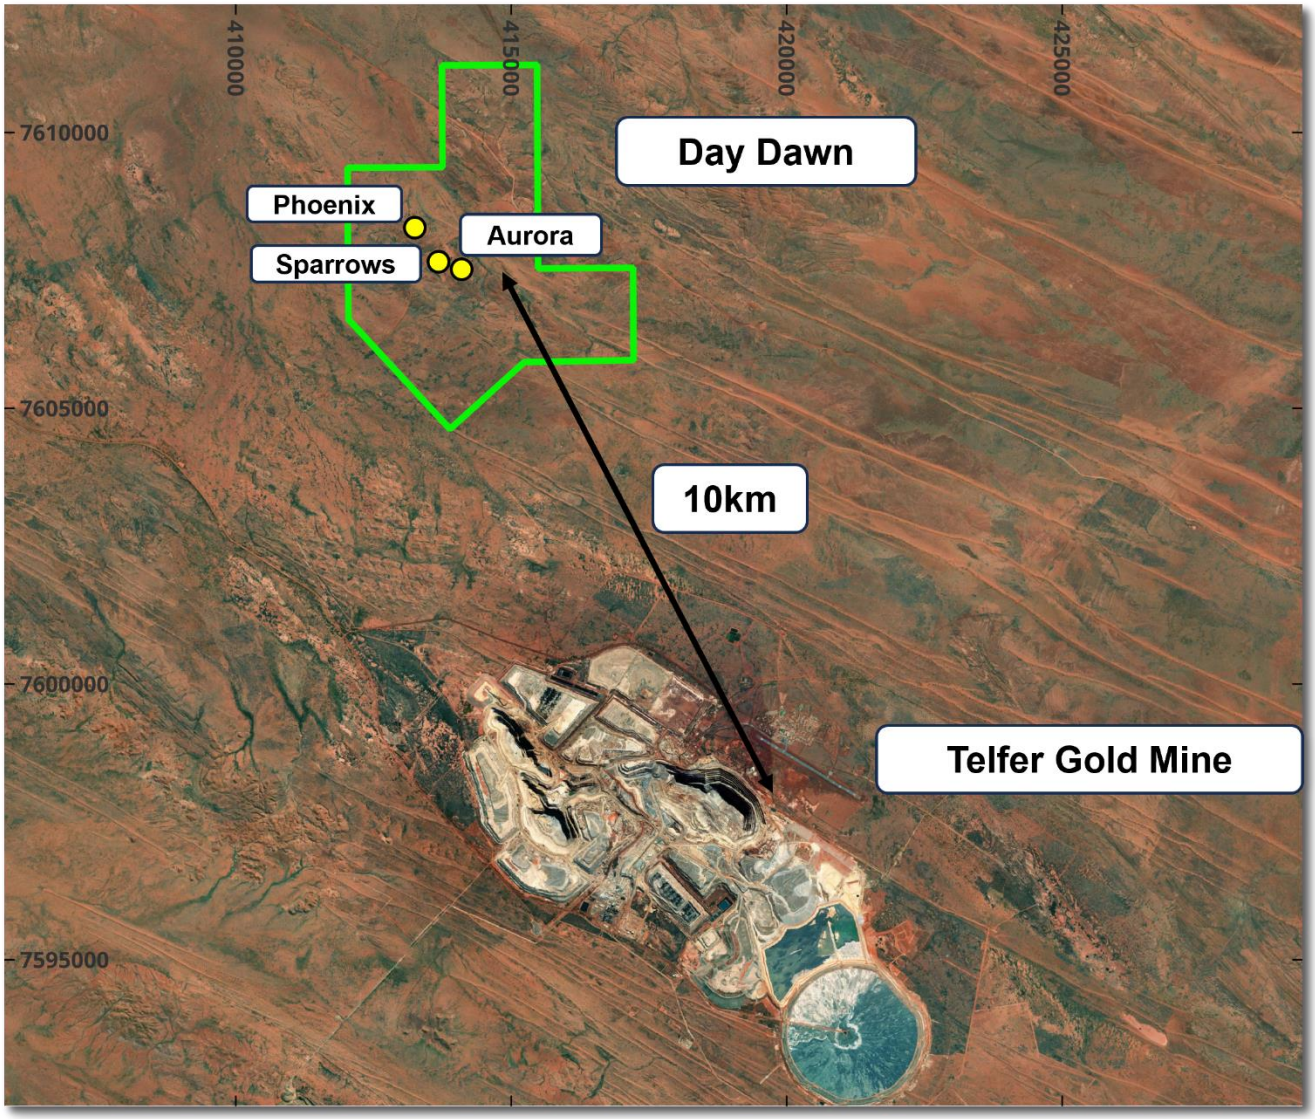

Figure 1 *– Day Dawn Project Location over Bing satellite imagery (GDA94 z51)*

For personal use only

Phase 1 RC Drill program

The Phase 1 RC drilling program at Day Dawn comprised 28 RC holes and was completed during the quarter. The program was designed primarily to test the Aurora Lode, interpreted as a steeply dipping, northeast-trending structure extending from surface and plunging to the southwest, together with initial testing of the parallel Altus prospect located approximately 50 metres to the southeast. Detailed drilling and interpretation of the complete Phase 1 dataset has confirmed the presence of two high-grade gold lodes at Aurora – an Upper Lode, which hosts the majority of near-surface high-grade mineralisation, and a newly interpreted Lower Lode identified beneath it, which remains open both up and down plunge. Together, these lodes are interpreted to form the start of a potentially en-echelon mineralised system. Significant intercepts include[1]:

- **3 metres at 93.4 g/t Au from 9 metres in PDR0001, including 2 metres at 128.9 g/t Au from 9 metres (Upper Lode)**
- **3 metres at 10.9 g/t Au from 7 metres in PDR0007, including 1 metre at 15.9 g/t Au from 8 metres (Upper Lode)**
- **5 metres at 9.1 g/t Au from 18 metres in PDR0008, including 1 metre at 31.9 g/t Au from 19 metres (Upper Lode)**
- **3 metres at 17.1 g/t Au from 17 metres in PDR0011, including 2 metres at 24.3 g/t Au from 17 metres (Upper Lode)**
- **4 metres at 21.0 g/t Au from 27 metres in PDR0012, including 1 metre at 76.4 g/t Au from 28 metres (Upper Lode)**
- **3 metres at 18.3 g/t Au from 35 metres in PDR0013, including 2 metres at 26.4 g/t Au from 36 metres (Upper Lode)**
- **4 metres at 4.4 g/t Au from 47 metres in PDR0018 (Upper Lode)**
- **2 metres at 12.6 g/t Au from 36 metres in PDR0020 (Upper Lode)**
- **2 metres at 12.4 g/t Au from 149 metres in PDR0028 (Lower Lode)**
- **2 metres at 4.4 g/t Au from 167 metres in PDR0029 (Lower Lode)**

Two holes from the Phase 1 program tested the Altus prospect, located approximately 50 metres southeast of the Aurora Lode trend. Results from these holes, when combined with a re-evaluation of historical diamond hole ETG0055, support the interpretation of a previously unrecognised, conformable reef-style gold mineralisation system at Altus that remains open in all directions. Significant intercepts include[1]:

- **1 metre at 11.4 g/t Au from 26 metres in PDR0004, and 1 metre at 8.9 g/t Au from 29 metres**
- **2 metres at 7.0 g/t Au from 45 metres in PDR0005, including 1 metre at 12.0 g/t Au from 46 metres**
- **1 metre at 21.5 g/t Au from 24 metres in PDR0005**

The recognition of flat-lying, reef-style mineralisation at Altus is considered highly significant, given that the majority of high-grade gold mineralisation at the nearby Telfer Gold-Copper Mine is hosted within similar conformable reef systems. The combination of steep, feeder-style lodes at Aurora and

For personal use only

stratigraphically-controlled reef mineralisation at Altus is considered analogous to the architecture of major Proterozoic sediment-hosted gold deposits, including Telfer.

The Phase 1 RC drilling of the Aurora and Altus lodes has confirmed the geological reinterpretation of the historical data, provided contemporary analytical results and sufficient sample material for initial metallurgical test work.

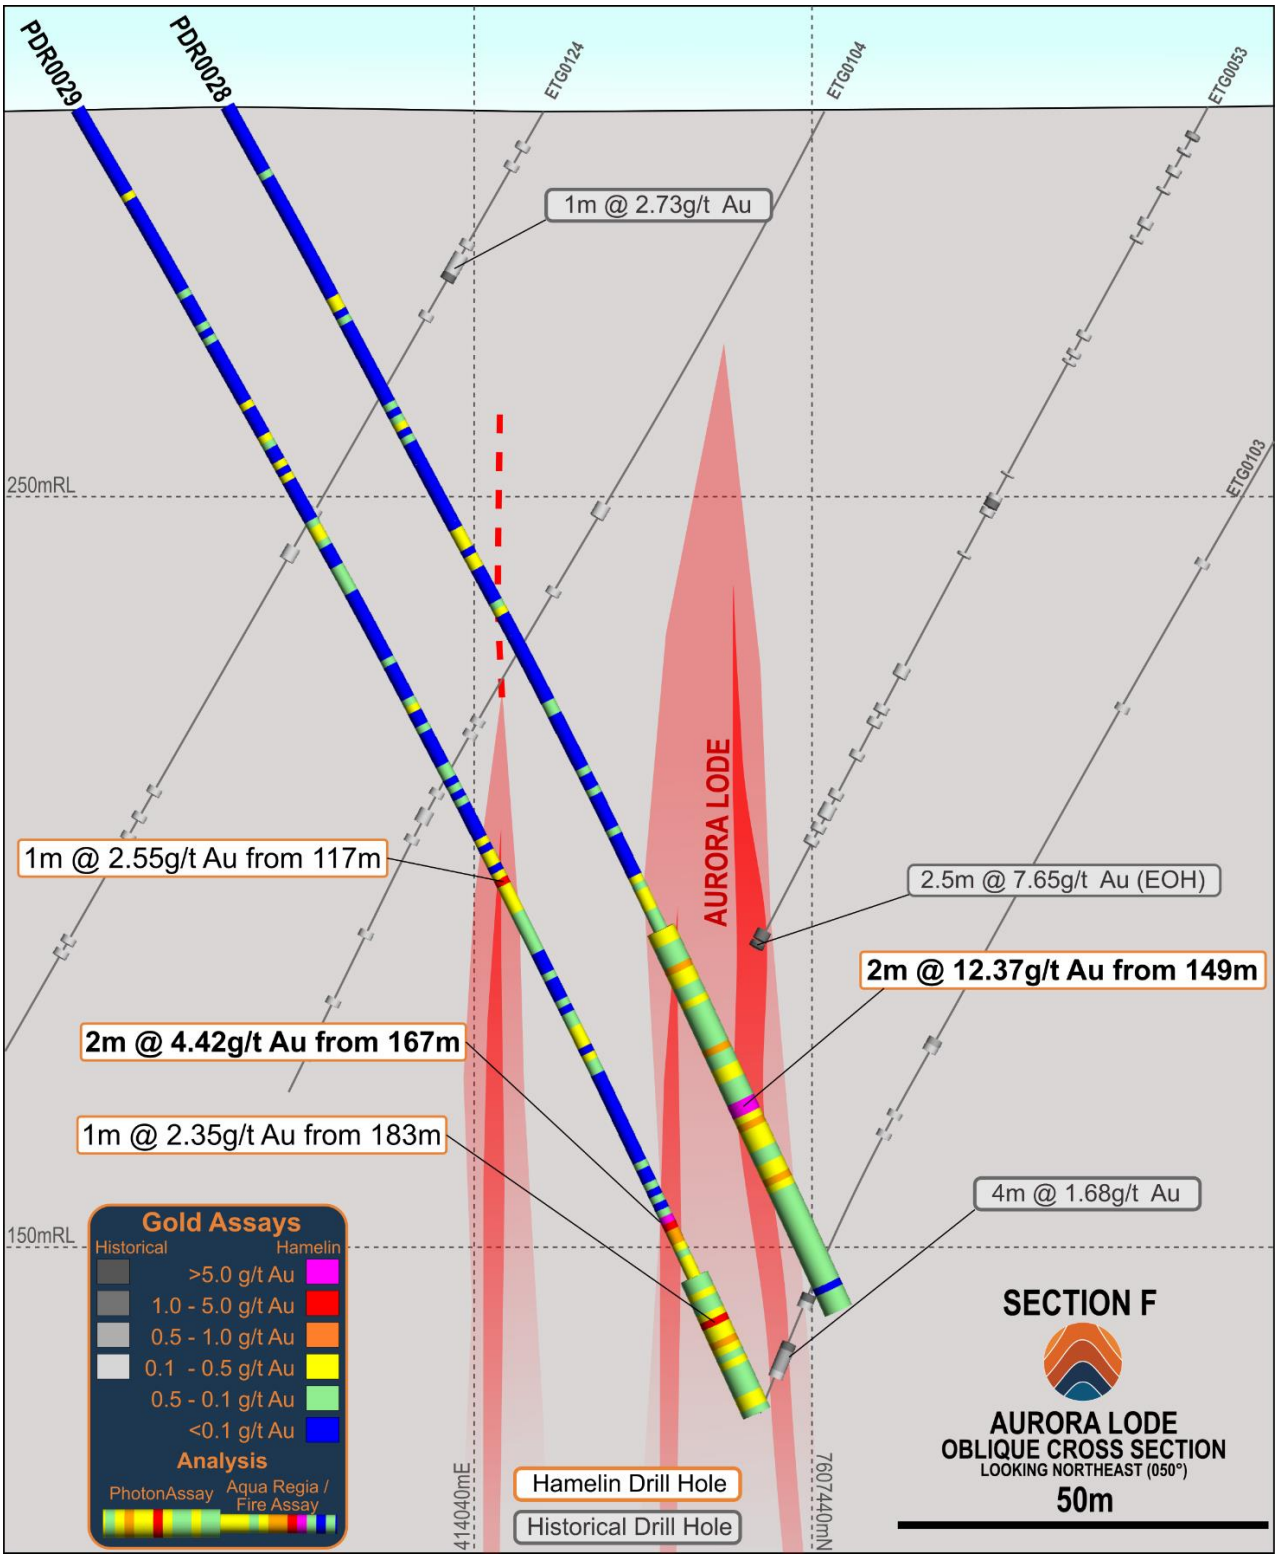

Figure 4: Aurora Cross Lower Lode

Phase 2 RC Drill Program

The Phase 2 RC drilling program at Day Dawn was completed during the quarter, with the program expanded from an originally planned ~3,000 metres to ~4,000 metres across 35 holes, reflecting the identification of additional priority targets during drilling. The program was designed to test near-surface extensions of the Aurora and Altus lodes, evaluate down-plunge continuity of mineralisation, and complete an initial assessment of potential parallel lode positions within the broader mineralised corridor. More than 4,000 samples were generated from the program and submitted for analysis, with assay results expected to be reported in October 2026.

Geological observations from the Phase 2 program indicate that both the Aurora and Altus lodes remain open at depth, reinforcing the potential for the Day Dawn system to extend below the limits of current RC drilling. Where wet sample conditions are encountered below approximately 150–200 metres depth, future testing of the lodes will be undertaken by diamond drilling to maintain sample quality and maximise confidence in the geological interpretation of this high-grade gold system.

Preliminary structural interpretation of the Day Dawn mineralised system has been advanced through analysis of downhole televiewer survey data collected from selected Phase 1 and Phase 2 RC holes, providing valuable insight into the orientation and geometry of both lode and reef-style mineralisation and contributing to the development of a three-dimensional structural model for the project. Ongoing interpretation will continue to refine the understanding of controls on mineralisation and assist in targeting future drilling.

Upcoming Diamond Drill Program

Diamond drilling is scheduled to commence at Day Dawn in 1-2 weeks and will comprise a series of diamond tails extending selected RC pre-collars, together with dedicated large-diameter core holes through the upper portions of the Aurora and Altus lodes. In addition to testing the down-plunge continuity of mineralisation, the shallow diamond core holes will provide material for preliminary metallurgical test work and generate critical structural data to validate and refine interpretations derived from downhole televiewer surveys.

EIS co-funded diamond drilling

Hamelin considers the northeast trending high-grade lodes identified at Day Dawn to potentially represent the upper expression of a more significant mineralised system, with similarities in style to the Telfer gold-copper deposit.

In May 2026, Hamelin was awarded a co-funded drilling grant under the Western Australian Government's Exploration Incentive Scheme (EIS) *(refer ASX announcement dated 7 May 2026)*. The grant, of up to $180,000, will support a diamond drilling program designed to test the Company's Telfer-style exploration model and evaluate the potential for a substantial gold system beneath the currently defined mineralisation.

Figure 5 presents a schematic interpretation of the prospective stratigraphy and potential mineralisation styles at Day Dawn. Hamelin's initial RC drilling campaigns are focused on discovering and delineating near-surface, high-grade gold lodes hosted within the Outer Siltstone unit. The planned EIS co-funded diamond drilling program will extend the exploration search space to depth, targeting favourable stratigraphic horizons within the Lower Telfer and Upper Malu Members that are considered prospective for larger-scale gold mineralisation.

Importantly, geological, structural and geochemical information generated from the RC drilling programs will be integrated into the final targeting strategy, ensuring the EIS-funded diamond holes are optimally positioned to test the highest-priority zones within the broader mineral system.

A series of RC pre-collars have been completed as part of the Phase 2 program to support the upcoming diamond drilling program, which will comprise diamond tails on selected pre-collars to test the down-plunge continuity of the Aurora and Altus lodes. In addition, diamond core holes will provide material for preliminary metallurgical test work and generate structural data to validate and refine interpretations derived from the downhole televiewer surveys. The diamond drilling program is scheduled to commence in October 2026.

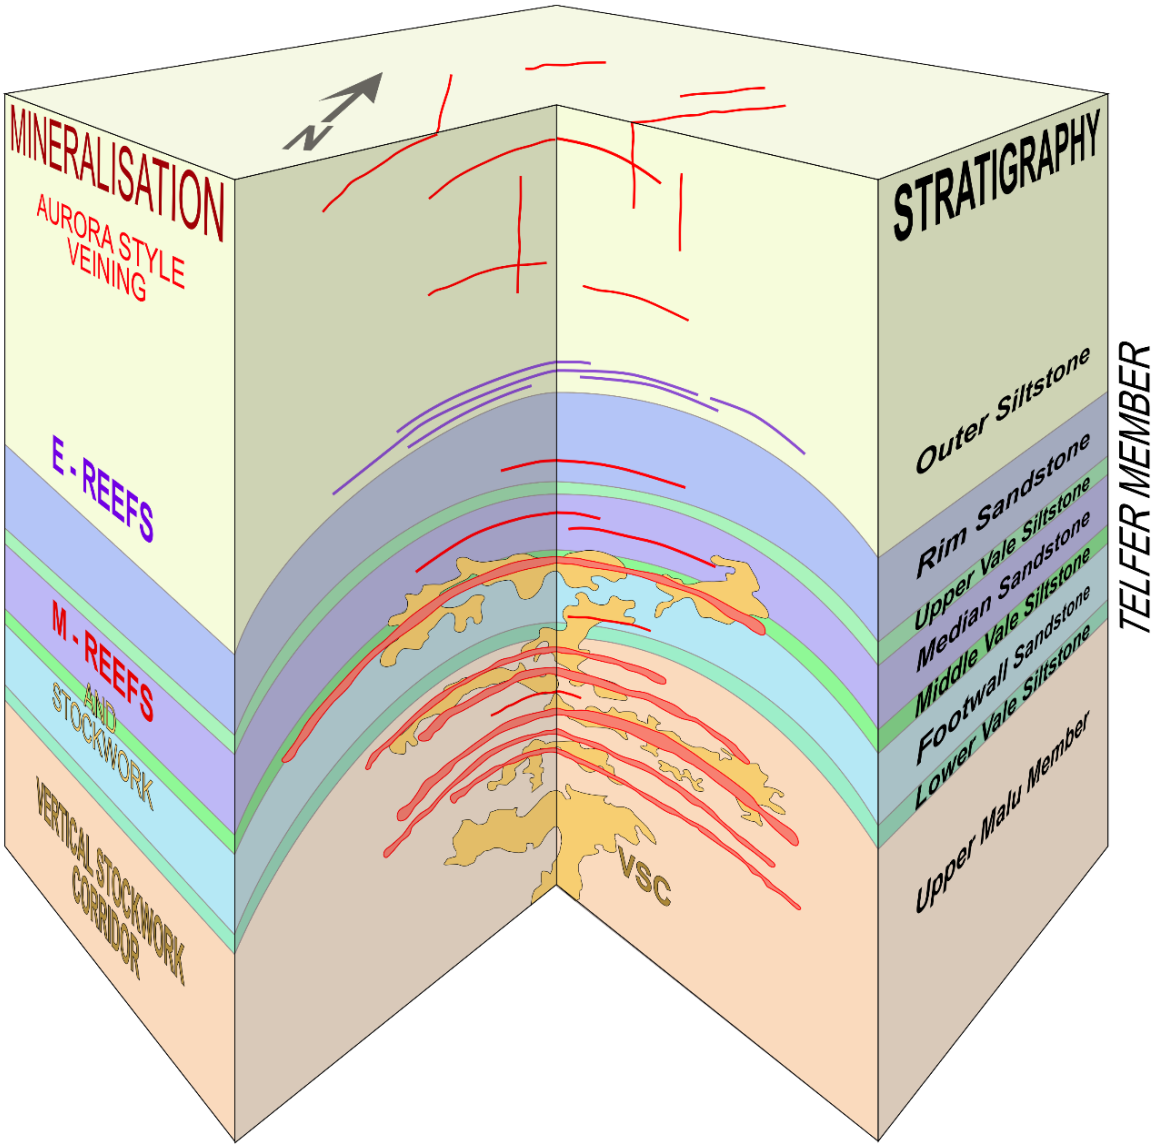

***Figure 5**: Day Dawn Project – Schematic geological and gold mineralisation model*

Venus Project - Murchison District (Yilgarn Province)

Hamelin's Venus Gold Project covers approximately 300km² of granted exploration tenure located 15km southeast of Cue in the heart of the resurgent +15Moz Murchison Goldfield (see Figure 6). The Company is one of the largest tenement holders in the Cue region, with tenure covering the southern extensions of both the Tuckabianna and Comet gold corridors, together with extensive areas of underexplored greenstone stratigraphy concealed beneath Lake Austin sediments.

During the quarter, Hamelin continued to advance the project through further the integration of recently acquired geophysical datasets and completion of key permitting and heritage clearance required ahead of drilling.

For personal use only

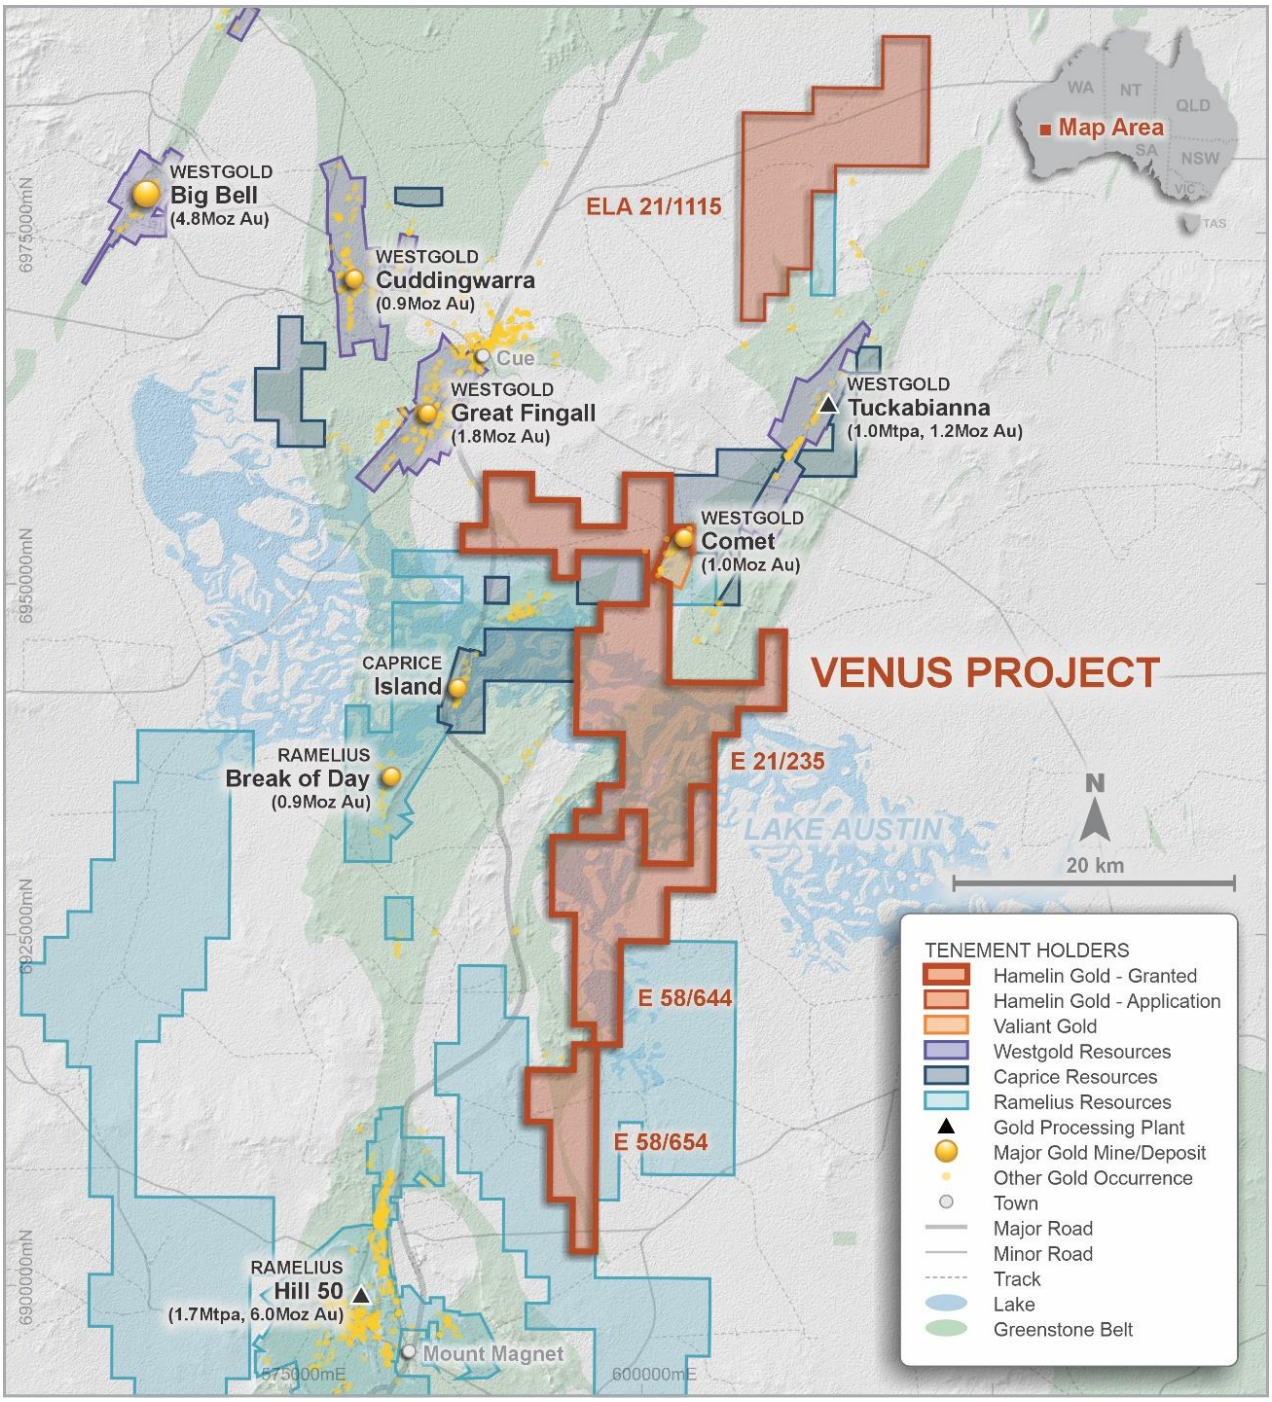

***Figure 6**: Venus Project – Location plan, major gold occurrences and regional leasing (GDA94 z50)*

Target Refinement and Drill Planning

The detailed structural and geological interpretation completed during the previous quarter has significantly improved the Company's understanding of the undercover geology beneath Lake Austin. The interpretation, supported by the recently completed high-resolution aeromagnetic and radiometric survey, has refined several priority gold targets and provided the basis for the Company's maiden drilling program in the southern Lake Austin region.

Three priority undercover gold prospects, Veritas, Mariner and Davinci, have been selected for initial drill testing (see Figure 7b). These targets are associated with interpreted structural complexities and favourable geological settings along the southern extensions of the Tuckabianna and Comet gold corridors beneath shallow lake cover.

Heritage Survey Completed

A heritage survey was successfully completed during May 2026 in consultation with the Badimia People across the southern Lake Austin project area. The survey covered the proposed drill access corridors and planned drilling locations.

The survey was completed without identifying any significant impediments to the proposed exploration activities, and clearance was granted for the planned aircore drill traverses and associated access routes.

Upcoming Drilling Program

Planning and logistical preparations for the lake aircore drilling program were advanced during the quarter following completion of the heritage survey. The proposed program comprises approximately 130 aircore holes designed to provide an initial test of the three priority prospects.

Drilling is now scheduled to commence in early 2027 and will represent the first systematic drill testing of these newly defined undercover gold targets beneath Lake Austin.

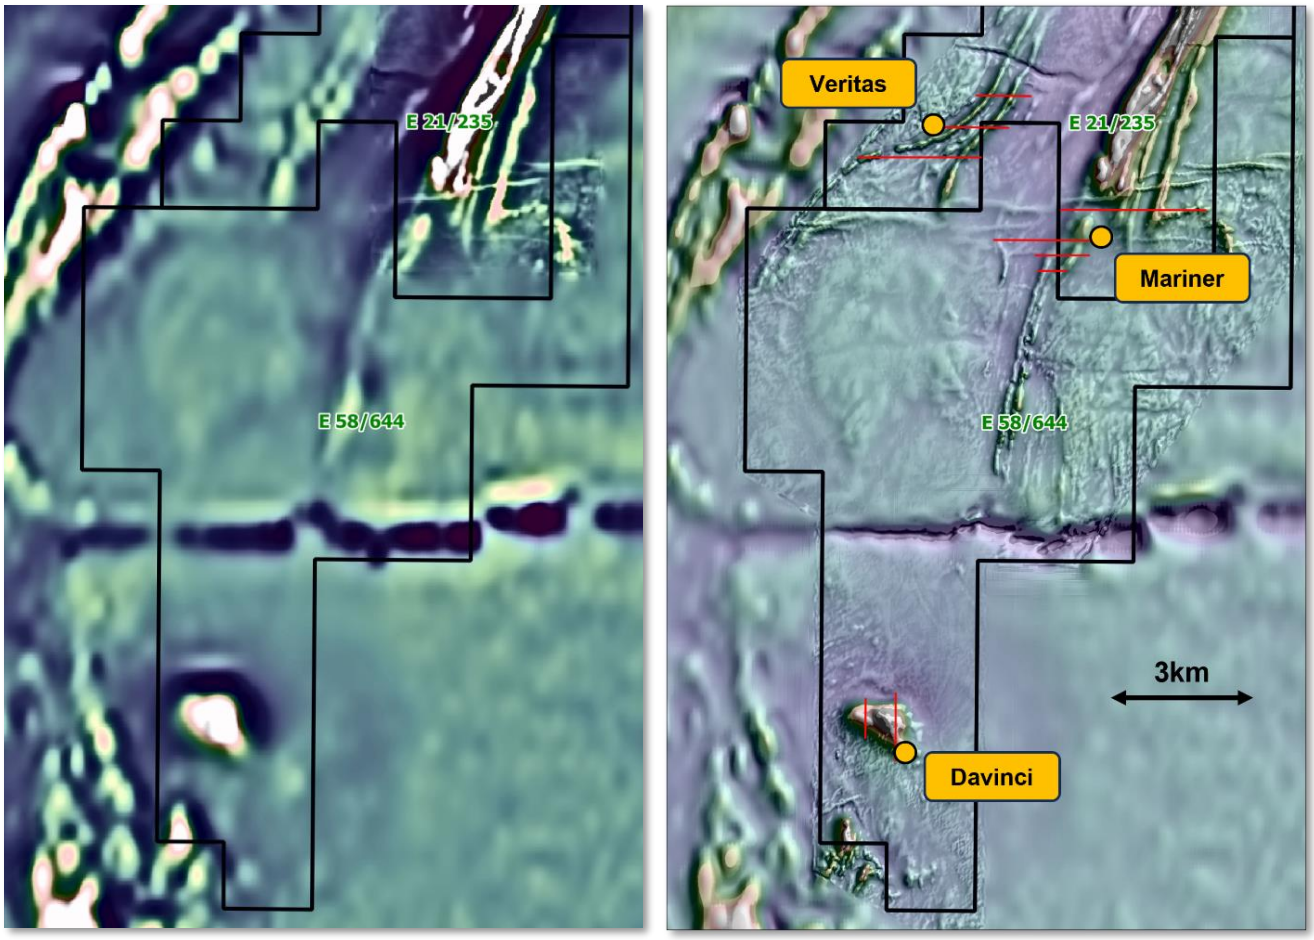

***Figure 7a**: Venus Project – Regional aeromagnetic data on leasing*
***Figure 7b**: Venus Project – Detailed aeromagnetic data, planned drill lines and prospects (GDA94 z50)*

For personal use only

West Tanami Project (Tanami Province)

The West Tanami Project is located in the northeast of Western Australia (see Figure 11) and considered highly prospective for multi-million ounce orogenic gold deposits. Historical exploration at the project has identified a suite of multi kilometre scale gold footprints in shallow drilling. Hamelin's focus is to define higher grade mineralisation within these large-scale mineral systems.

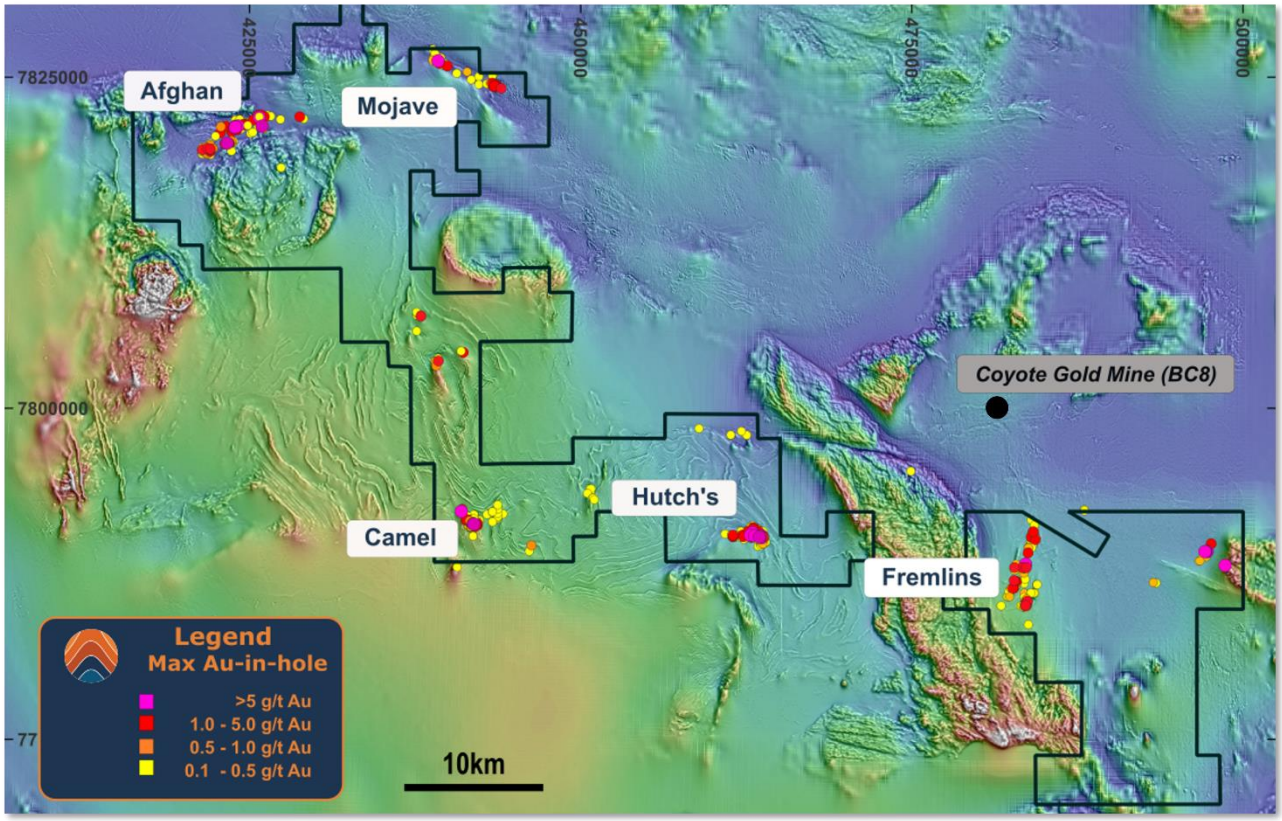

***Figure 8**: West Tanami Leases, max gold-in-hole² (+0.1g/t Au), key prospects on magnetics (GDA94 z52)*

Fremlins South

Aircore drilling at Fremlins South, located 14 kilometres south of the Coyote Gold Mine, has identified a significant zone of shallow gold mineralisation *(see ASX announcement 12 September 2025)*. Gold anomalism greater than 1 g/t is now defined over a strike length exceeding 400 metres and remains open at depth (see Figure 9).

Significant aircore intersections from this program include *(see ASX Announcement 14 Nov 2025)*:

- 12 metres @ 0.82 g/t Au from 24 metres (TLA0134)
  - incl. 6 metres @ 1.34 g/t Au from 26 metres
- 6 metres @ 1.01 g/t Au from 40 metres (TLA0125)
- 4 metres @ 0.99 g/t Au from 30 metres (TLA0129)

Detailed drilling along the defined corridor will provide greater confidence in the continuity of mineralisation, improve the 3D geological model and define targets for deeper RC and diamond drilling.

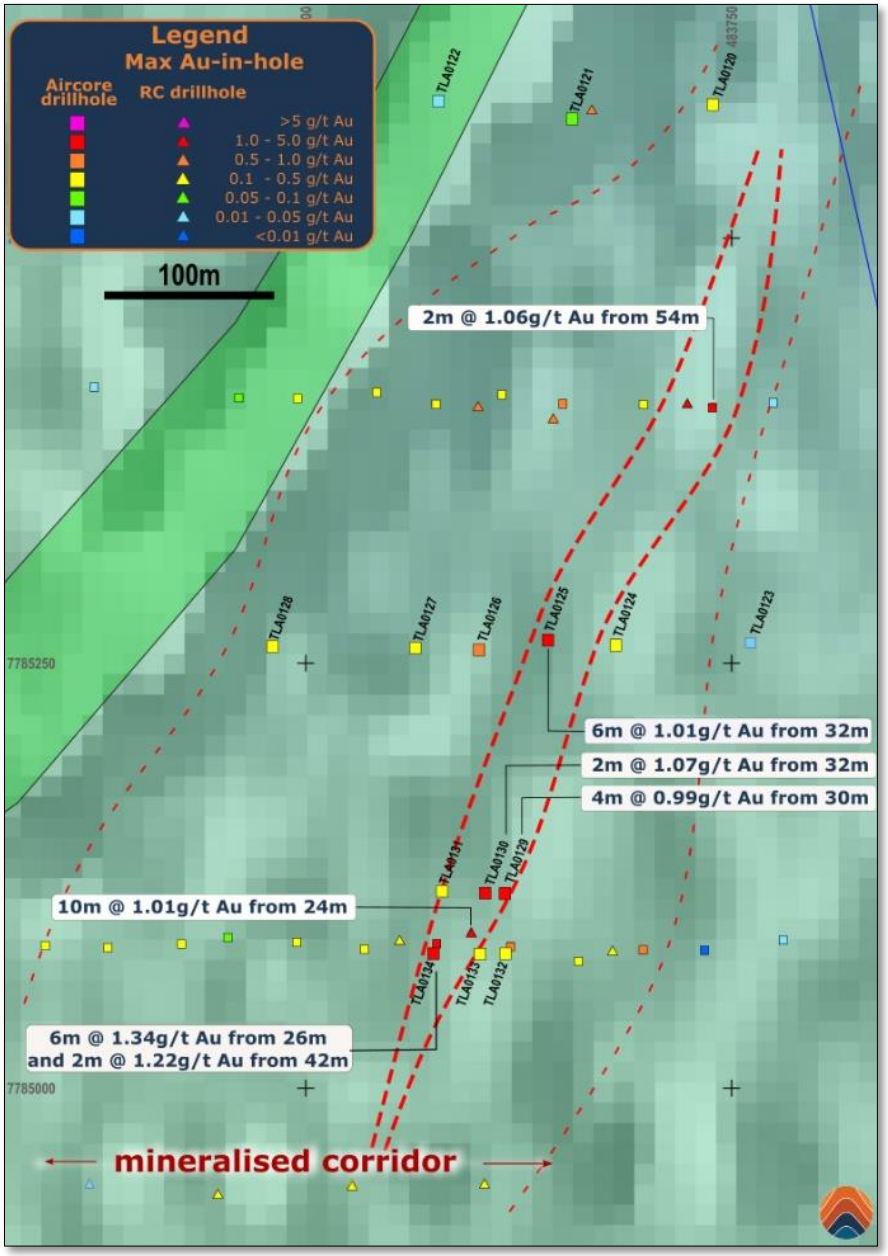

***Figure 9**: Fremlins South RC drilling results (GDA94 z52)*
see ASX announcements 12 Sep 2025 & 14 Nov 2025

Jazz Prospect

The Jazz prospect is located at the western end of the Afghan Trend in the northwest of the project (see Figure 8).

Assay results from the EIS co-funded 21-hole, 3,041 metre RC drill program completed at Jazz have outlined broad zones of shallow north-dipping low-grade gold mineralisation associated with the northern Jazz Granitoid contact zones as well as discrete zones internal to the granitoid.

Gold mineralisation has been intersected across multiple sections and traced over more than 500 metres of strike (see Figure 10). The distribution of gold, pathfinder geochemistry and alteration signatures is consistent with a large hydrothermal system, with the potential for high-grade shoots to develop in structurally and/or lithologically controlled positions.

The next phase of RC drilling has been designed to test structural targets and assess extensions to the system towards the south, west and at depth.

see ASX Announcement 13 Jan 2025 & 14 Nov 2025

Project Generation Activities

Continued evaluation of high-priority exploration opportunities within the Tanami, Paterson and Yilgarn gold provinces of Western Australia has resulted in the lodgement of four new Exploration Licence applications since the beginning of 2026. As these applications advance through the statutory granting process, historical exploration datasets, geological information and available geophysical and geochemical survey data are being systematically compiled and reviewed to assess their prospectivity and guide future exploration strategies. Detailed summaries of the historical exploration completed within each project area, together with proposed exploration programs, will be reported as the applications approach grant and access timelines become better defined.

[2]*Information on historical results outlined in this Announcement together with JORC Table 1 information, is contained in the Independent Technical Assessment Report within Hamelin's Prospectus dated 17 September 2021, which was released in an announcement on 3 November 2021.*

The Company confirms that it is not aware of any new information or data that materially affects the information in the relevant ASX releases and that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

Corporate

Hamelin Gold held cash reserves of ~$9.0 million at 30 September 2026.

The carrying value of the Company's investment in 508,937 fully paid ordinary shares in Gorilla Gold Mines Ltd (ASX:GG8) (subject to voluntary escrow to 17 March 2027) at 30 September 2026 was ~$152,000.

Securities

On 17 August 2026 the Company announced a placement to sophisticated, professional, and experienced investors to raise ~$8 million (before costs) priced at $0.16 per share (**Placement**).

A total of 49,575,892 shares were issued to unrelated parties pursuant to the first tranche of the placement comprising 29,745,535 shares issued pursuant to ASX Listing Rule 7.1 and 19,830,357 shares issued pursuant to ASX Listing Rule 7.1A.

Directors of the Company have made commitments to subscribe for 2,005,709 shares pursuant to the Placement on the same terms as unrelated parties.

There were no other changes to securities of the Company during the quarter.

Related party transactions

Payments to related parties of the entity and their associates (refer section 6 of Appendix 5B below):

		$(000)

Quarterly exploration reporting – ASX Listing Rule 5.3.1

In accordance with ASX Listing Rule 5.3.1, the Company confirms that there have been no material developments or changes to its exploration activities, and provides the following information:

- Approximately $863k (YTD $863k) was incurred by the Company in respect of exploration activity for the quarter ended 30 September 2026, predominantly at the wholly owned Day Dawn gold project.
- A summary of the specific exploration activities undertaken in each project area (which included drilling and geochemical and geophysical programs), is provided in the relevant sections of this activity report

In accordance with ASX Listing Rule 5.3.2, the Company advises that no Mining Development or Production activities were conducted during the quarter.

For personal use only

Schedule of Tenements

Please find attached a schedule of mining tenement interests pursuant to ASX Listing Rule 5.3.3 in respect of the Quarterly Activities Report for the period ended 30 September 2026:

Lease	Region	Project	Area km^2	Interest at start of quarter (01/07/2026)	Interest at end of quarter (30/09/2026)

About Hamelin Gold

Hamelin Gold Limited (**ASX:HMG**) is an ASX-listed gold exploration company based in Perth, Western Australia. Hamelin has landholdings in the Tanami, Paterson and Yilgarn Gold Provinces of Western Australia (Figure 11). Hamelin's Paterson and Yilgarn province projects cover underexplored regions of well mineralised gold terrains and locations where new undercover exploration technologies can be applied. The Tanami province is prospective for high value, large scale gold deposits and hosts Newmont's Tier 1 Tanami Operations in the Northern Territory.

***Figure 11**: Hamelin Gold Project Location Plan*

The Company has a strong Board and Management team and is well funded. Hamelin's shareholders include highly regarded gold miners Gold Fields Limited (JSE/NYSE:GFI) and Vault Minerals Limited (ASX:VAU).

8.5	Unused finance facilities available at quarter end (item 7.5)	-
8.6	Total available funding (item 8.4 + item 8.5)	8,961
8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	8.3

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

Answer: N/a

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer: N/a

For personal use only

8.8.2	Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?
Answer: N/a	
8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
Answer: N/a	

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 12 October 2026

(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
