September 2026 Quarterly Activities Report

The September Quarter marked Solstice's busiest exploration period to date, with **ongoing multi-rig drilling delivering exceptional results and reinforcing the scale and growth potential** of the 100%-owned **Nanadie Copper-Gold Project**. Drilling is extending mineralisation in multiple directions well beyond the current 40.4Mt Mineral Resource Estimate[1] (MRE) boundary, **transforming an already significant deposit** into a **substantial, large-volume copper-gold system in WA's premier Goldfields mining jurisdiction**. With $41.3 million in cash and no debt, Solstice is exceptionally well positioned to continue building scale and value at Nanadie, while also unlocking the significant value of its **Yarri** and **Ringlock** gold projects.

The Company's progress during the Quarter is documented in full in the following ASX releases, which are available at the Company website: **https://solsticeminerals.com.au**

3 August 2026	'Multiple Wide Cu Intercepts Continue to Grow Nanadie'
20 August 2026	'Wide Copper-Gold Intercepts Extend Growing Nanadie Deposit'
28 August 2026	'Nanadie High-Grade Copper-Gold Zones Extend Over 700m Deep'
31 August 2026	'Significant High-Grade Copper-Gold Zones at Nanadie'
29 September 2026	'Major New Copper-Gold Hits Expand Nanadie'
13 October 2026	'Wide, High-Grade Copper-Gold Hits Keep Coming at Nanadie'

Nanadie Highlights

- **Reverse Circulation (RC) and diamond drilling** accelerated during the Quarter, with assays from **15 diamond 'tails'** (3,327m) and **26 RC holes** (7,296m) **delivering numerous wide and high-grade copper-gold intercepts. Drilling continues to demonstrate the scale of a mineralised system extending over at least 1.5km of strike and approximately 100-200m wide**, which remains open to the north, south and at depth.

Diamond Drilling Results

- **Diamond drilling delivered exceptional results**, headlined by a **standout combined RC and diamond intercept** of **722.3m @ 0.44% Cu, 0.13g/t Au** in **NANRCD005**, inclusive of low-grade and unmineralised intervals. Together with the previously reported combined intercept of **629.1m @ 0.50% Cu, 0.17g/t Au EOH** in **NANRCD004**[2] on the same drill section, this highlights the substantial **scale and continuity of copper-gold mineralisation** beyond the existing MRE.
- **Assays from all diamond tails** continue to build a picture of a **robust mineralised system**, with a **multitude of strong, thick copper-gold intercepts**, particularly **along the eastern margin of the host gabbro**. Selected significant results[2] include:
  - **NANRCD005**:
    - **89.3m @ 0.64% Cu, 0.17g/t Au** incl. **16m @ 1.24% Cu, 0.27g/t Au**, **28m @ 1.31% Cu, 0.30g/t Au**,
    - **19.4m @ 0.99% Cu, 0.27g/t Au**, and
    - **43.3m @ 0.91% Cu, 0.35g/t Au** incl. **10.3m @ 1.25% Cu, 0.41g/t Au** and **8m @ 1.49% Cu, 0.86g/t Au**.

For personal use only

- **NANRCD001**:
  - **169.3m @ 0.87% Cu, 0.29g/t Au** incl **73.3m @ 1.07% Cu, 0.26g/t Au** incl. **8m @ 2.12% Cu, 0.45g/t Au** and **6.3m @ 2.65% Cu 0.46g/t Au**.
- **NANRCD014**:
  - **54.8m @ 0.83% Cu, 0.30g/t Au** incl. **25.6m @ 1.33% Cu, 0.53g/t Au**, and
  - **64.1m @ 0.94% Cu, 0.23 g/t Au**, incl. **23.7m @ 1.49% Cu, 0.44 g/t Au** and **6m @ 2.26% Cu, 0.33 g/t Au**.
- **NANRCD017**:
  - **60.0m @ 0.59% Cu, 0.18g/t Au**,
  - **45.8m @ 0.80% Cu, 0.16g/t Au**, and an exceptional **silver** intercept of
  - **7m @ 1,019g/t silver**, including **2m @ 3,103g/t silver**.
- **NANRCD018**:
  - **148m @ 0.77% Cu, 0.20g/t Au** combined intercept (RC and diamond 'tail'), and
  - **43.4m @ 0.56% Cu, 0.15g/t Au**.
- **NANRCD033**:
  - **52m @ 0.71% Cu, 0.13g/t Au**, incl. **6m @ 1.79% Cu and 0.37g/t Au**, and
  - **48m @ 0.59% Cu, 0.16g/t Au**.
- **NANRCD058**:
  - **91.4m @ 0.97% Cu, 0.42g/t Au**, combined intercept (RC and diamond 'tail'), incl. **4.9m @ 4.67% Cu, 1.01g/t Au**.
- **NANRCD059**:
  - **25.4m @ 1.00% Cu, 0.15g/t Au**

RC Drilling Results

- **RC drilling continued to deliver strong results along the 1.5km strike length of the Nanadie system**, extending copper-gold sulphide zones to the north and south and defining important shallow, **previously unrecognised high-grade zones**, particularly to the north of a local cross-fault. Standout RC intercepts[2] include:
  - **NANRC057**:
    - **18m @ 2.29% Cu, 1.12g/t Au to EOH** incl. **5m @ 6.88% Cu, 3.60g/t Au**, and
    - **57m @ 0.60% Cu, 0.15g/t Au**.
  - **NANRCD041**:
    - **51m @ 1.03% Cu, 0.29g/t Au**.
  - **NANRCD040**:
    - **35m @ 0.87% Cu, 0.27g/t Au**, incl. **12m @ 1.38% Cu, 0.49g/t Au**.
  - **NANRCD035**:
    - **30m @ 1.15% Cu, 0.25 g/t Au**.
  - **NANRCD038**:
    - **97m @ 0.57% Cu, 0.16g/t Au**.

For personal use only

Ongoing Program

- Ongoing step-out, step-down and resource definition drilling continues to demonstrate the scale and continuity of the Nanadie system, **reinforcing the potential to materially expand the current MRE both in size and grade**.
- Upgraded field infrastructure has been installed to support the three drill rigs currently operating at Nanadie, **with the multi-rig RC and diamond program expected to continue throughout the remainder of 2026.**
- **Assays are pending from a further 14 completed diamond holes and more than 50 RC holes**, providing **a substantial pipeline of results** over the coming months as Solstice continues to expand the scale of the Nanadie system.
- Nanadie sits beneath shallow cover and weathering on a **granted Mining Lease** in flat WA Goldfields terrain, representing a **compelling copper-gold growth opportunity** in a mining-friendly jurisdiction.

Managing Director's Comment

Solstice Minerals' Chief Executive Officer and Managing Director, Mr Nick Castleden, said:

"Nanadie is rapidly emerging as a substantial copper-gold mineralised system with demonstrable scale and continuity, with results during the Quarter adding to our confidence in the significant growth potential of the deposit. The drill intercept tables below are stacked with outstanding intercepts, highlighting the extensive copper-gold (and now silver) opportunities ahead of us as we systematically test the more than 1.5km-long mineralised system.

"The eastern margin of the host gabbro is emerging as a particularly important MRE expansion target, consistently delivering broad zones of copper-gold mineralisation. Results from NANRCD005 were pivotal to this understanding, with a combined intercept of 722.3m @ 0.44% Cu, 0.13g/t Au[2] – inclusive of post-mineral dykes and low-grade zones – providing compelling evidence for substantial mineralisation well beyond the current MRE limits. Together with NANRCD004 on the same drill section and the strong intercepts in NANRCD001, NANRCD014, NANRCD033 and NANRCD017, these results continue to build volume and grade. Meanwhile, NANRCD018 and NANRCD058 have delineated a shallow, higher-grade position north of the cross-fault that should have enormous value in any future pit optimisations.

"We are progressively increasing drilling density throughout the MRE area while continuing to step-down below the existing Resource with diamond drilling, including testing DHEM geophysical targets such as the NANRCD033 conductor plate[3]. Shallow RC drilling is also expanding the overall mineralised footprint. With assays pending from over 60 drillholes, shareholders can expect strong upcoming news flow.

"Against the backdrop of favourable long-term supply-demand fundamentals, investable copper growth projects in Tier-1 mining jurisdictions are scarce. This is reflected in the growing market interest in our activities, with research coverage now initiated by six Australian and international broking houses. With approximately $41 million in cash and no debt, Solstice is in an enviable position to maintain sustained drilling at Nanadie and unlock its full potential as a significant, high-volume copper-gold deposit on granted mining tenure and in a favourable WA Goldfields location. We have the targets and the financial capacity to aggressively explore this open-ended system, with the goal of materially expanding the MRE over time."

For personal use only

Solstice Minerals Limited (**Solstice** or the **Company**) is pleased to present its Quarterly Activities Report for the period ended 30 September 2026.

1. EXPLORATION OPERATIONS

Nanadie Copper Gold Project

RC and diamond drilling at Nanadie accelerated through the September Quarter, with **numerous wide and high-grade intercepts reported** from **15 diamond 'tails'** (for 3,327m) and **26 RC holes** (for 7,296m) across a mineralised system that now extends over at least **1.5km of strike** and **100-200m wide**.

Drilling is extending mineralisation in multiple directions well beyond the current Mineral Resource Estimate[1] (MRE) boundary, reinforcing the potential for a substantial, large-volume copper-gold system in WA's infrastructure-rich Goldfields mining jurisdiction.

Upgraded field infrastructure was put in place over the period to support faster core processing and sampling, and additional camp facilities were installed to facilitate sustained multi-rig drilling going forward.

Nanadie Diamond Drilling Results

Diamond 'tail' assays over the period have further demonstrated Nanadie to be a long, wide and deep mineralised system, with numerous highly significant copper-gold intercepts reported, particularly along the eastern margin of the host gabbro.

The locations of all diamond tails and key September Quarter results are shown in long section view in **Figure 1** and with selected cross-sections in **Figure 2**, **Figure 3**, **Figure 4**, and **Figure 5**.

Diamond tail details and significant intercepts are shown in **Table 1**.

The eastern margin of the host gabbro remains a priority for systematic drill-testing as the Company progresses the deposit toward a future Mineral Resource re-estimation.

A **further 14 diamond tails** (Figure 1) are in various stages of processing or at the laboratory with results expected to be progressively reported over the coming months.

								incl.	**4.9m @ 4.67% Cu, 1.01g/t Au**	222.0
									22.3m @ 0.62% Cu, 0.10g/t Au	240
NANRCD059	Nanadie	**RC/DD**	692762	6994872	-60	90	498.4	498.40	16m @ 0.42% Cu, 0.09g/t Au	355
									32m @ 0.43% Cu, 0.05g/t Au	385
									25.4m @ 1.00% Cu, 0.15g/t Au	451

Significant intercepts in Table 1 are typically reported for >10m intervals at a grade of >0.4% Cu, on the basis of a 0.2% Cu lower cut-off and allowing for a maximum 5m internal dilution.

Nanadie RC Drilling Results

Ongoing RC drilling over the period delivered additional strong intercepts along the length of the 1.5km strike of the system, extending copper-gold sulphide zones to the north and south and defining commercially important shallow high-grade zones, particularly to the north of a local cross-fault. Shallow drilling is progressing towards a nominal 40m x 40m drill-density, with particular focus on the eastern side of the host gabbro.

First RC drilling is also imminent at the nearby Stark Prospect (**Figure 6**).

The location of selected significant RC intercepts reported over the period are shown in plan view in **Figure 6** and selected cross-sections in **Figure 7**, **Figure 8** and **Figure 9**. RC collar details and significant intercepts are shown in **Table 2**.

With over 50 additional RC holes drilled and now at the laboratory, a steady flow of results from MRE definition, step-out exploration and pre-collar RC holes is expected over the coming months.

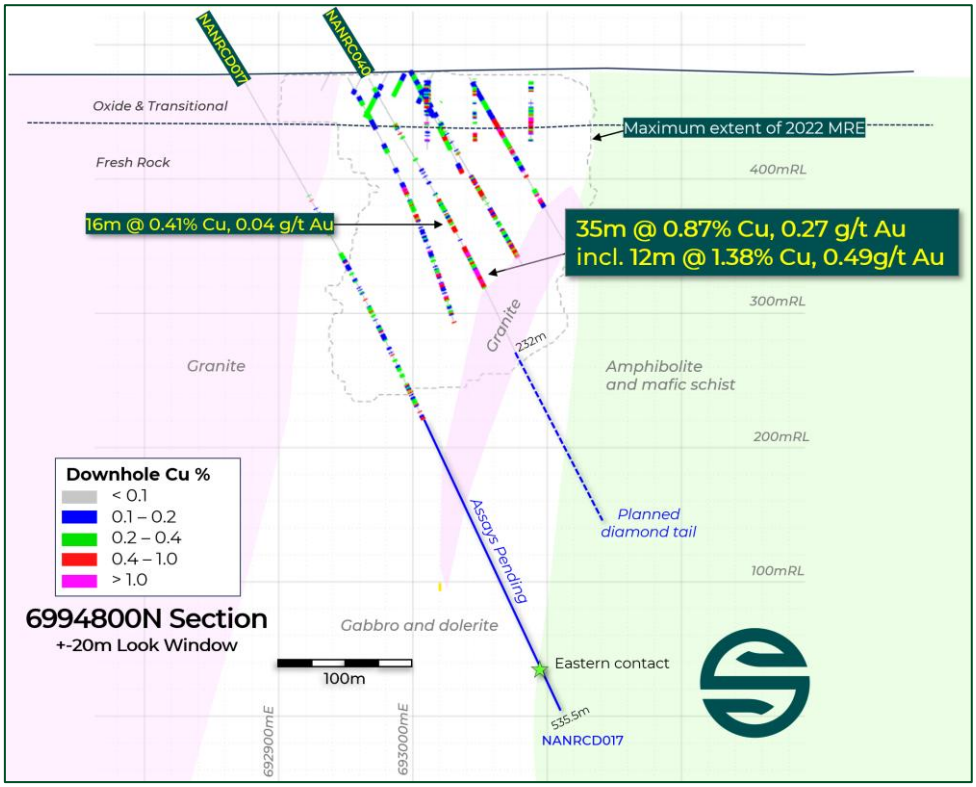

Figure 8. Nanadie Deposit cross-section 6994800N showing NANRC040 assay results, simplified geology, Solstice's RC and diamond holes[2], historical drilling[1], and the boundary of the 2022 MRE block model[1].

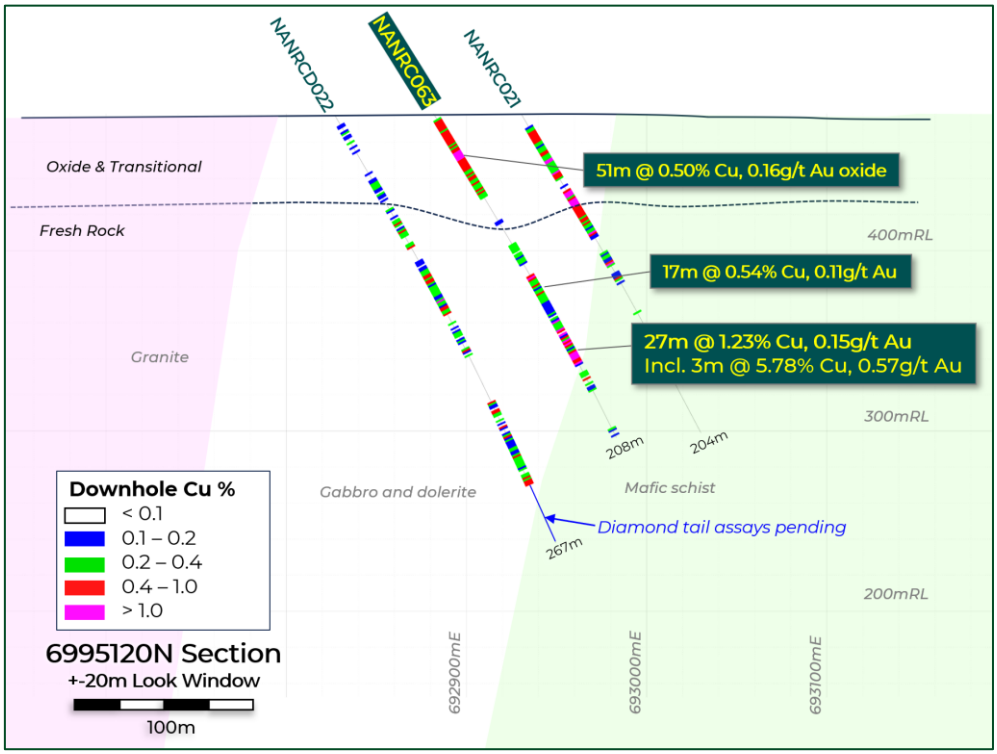

Figure 9. Nanadie Deposit cross-section 6995120N showing NANRC063 assay results, simplified geology, and prior Solstice RC holes[2].

DHEM Survey

Downhole electro-magnetic (**DHEM**) surveying in NANRCD033 successfully identified an off-hole **140m x 140m high-conductance plate** (**Figure 10**) located below the hole and immediately to the south of a local cross-fault (**Figure 1**), a structural position prospective for the accumulation of remobilised copper sulphides[3].

Importantly, there are no known unmineralised 'false-positive' EM conductors in the broader Nanadie system. The NANRCD033 DHEM plate will be tested as part of co-funding awarded through the West Australian Government's **Exploration Incentive Scheme (EIS)** program. In April this year, Solstice was awarded a up to $200,000 (maximum award) under Round 33 of EIS funding, comprising 50% of direct drilling costs and with an additional allowance of up to $50,000 available to assist with fuel supply.

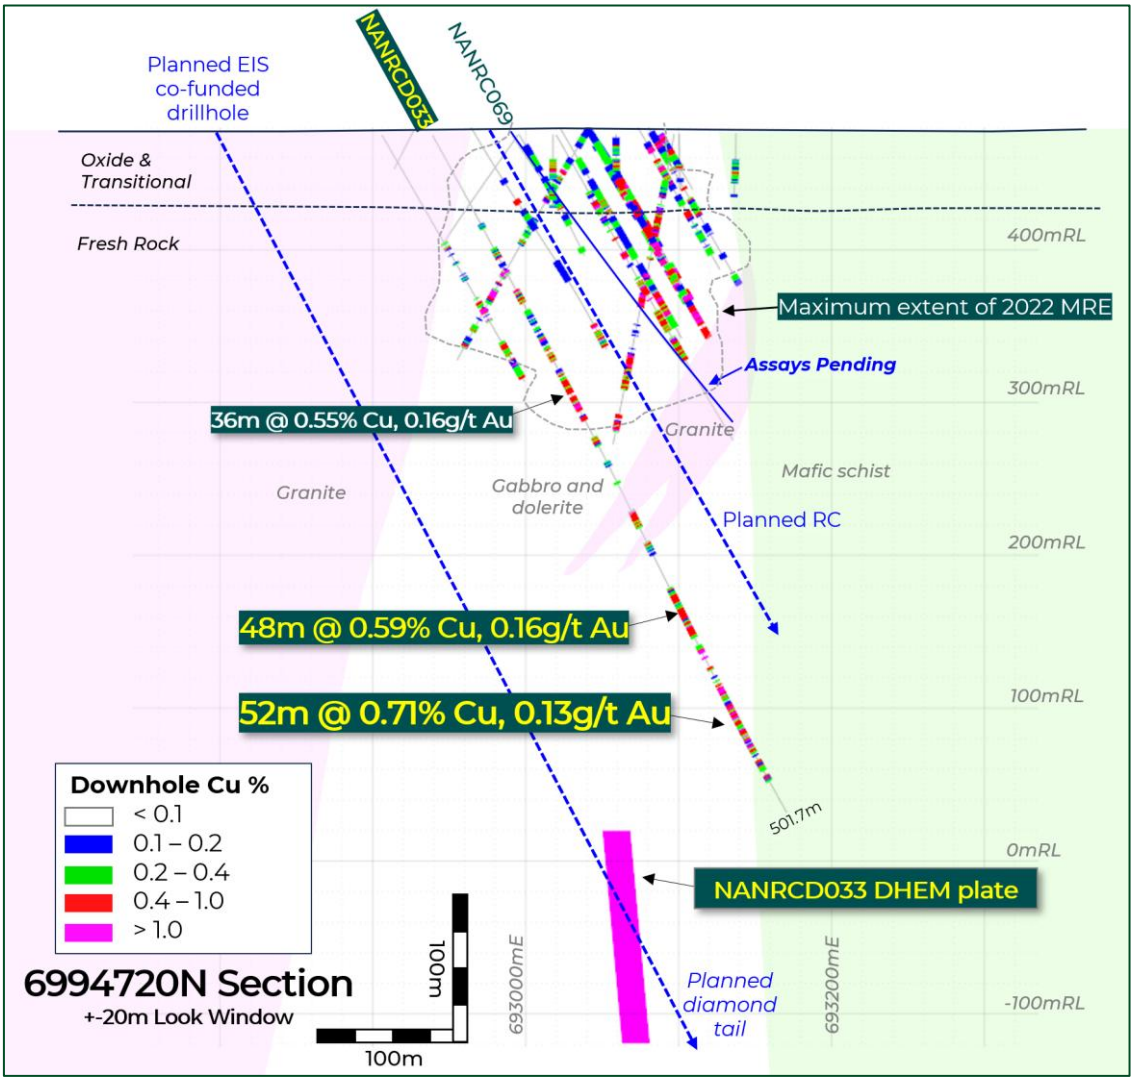

Figure 10. Nanadie Deposit cross-section 6994720N showing NANRCD033 assay results, simplified geology, and the location of the conductive plate generated by DHEM survey[3] in the hole. Also shown downhole copper values in Solstice' earlier drilling[2] and in historical drilling[1], and the boundary of the 2022 MRE block model[1].

About Nanadie

Nanadie is situated within a granted Mining Lease approximately 100km northwest of Sandstone (**Figure 11**) and includes an existing Inferred MRE of **40.4 million tonnes at 0.4% copper and 0.1g/t gold**, containing **162,000 tonnes of copper** and **130,000 ounces of gold**[1] (**Table 3**). The deposit represents a substantial base of strategic metals with strong future demand outlooks.

Historical drilling below a shallow soil and sand cover and weathering profile has defined wide, near-surface zones of disseminated and remobilised sulphide veinlet style chalcopyrite (+/- pyrrhotite and pyrite) mineralisation in a gabbro unit 100m-200m wide and at least 1.2 km long. Approximately 90% of the current MRE is in fresh rock below a shallow (less than 40m) weathering profile.

Mineralised intercepts are typically zones of disseminated and veinlet style copper sulphides in variably deformed and altered mafic intrusive rocks (gabbro, dolerite), separated in places by later (post-mineralisation) felsic and mafic dykes. Significant zones of >1% Cu occur where chalcopyrite vein density and host-rock alteration increase, and increased sulphide veining is typically accompanied by raised gold values. No deleterious sulphide species are present.

Solstice's updated geological model suggests that Nanadie and the nearby Stark Prospect are broad accumulations of primary disseminated copper-gold sulphide mineralisation that has been remobilised in places during a subsequent felsic intrusion, deformation and alteration event. The secondary event is likely responsible for the wide zones of high-grade mineralisation encountered to date.

Table 3: Nanadie Well Historical Mineral Resource Estimate[1].

Resource Category	Material Type	Volume	Tonnes	Cu Grade (%)	Cu Metal (t)	Au Grade (g/t)	Au Metal (oz)	Ag Grade (g/t)	Ag Metal (oz)
Inferred	Oxide	1,300,000	3,500,000	0.44	16,000	0.12	13,000	0.70	74,000
	Transitional	200,000	600,000	0.45	3,000	0.12	2,000	1.50	31,000
	Fresh	11,700,000	36,300,000	0.39	143,000	0.10	115,000	1.10	1,259,000
Total		**13,200,000**	**40,400,000**	**0.4**	**162,000**	**0.10**	**130,000**	**1.00**	**1,364,000**

Note: Differences in sum totals of tonnages and grades may occur due to rounding cut-off at 0.25% Cu, reported grades and tonnages for all metals are estimated top-cut grades and tonnages.

Eastern Goldfields Projects, WA

Yarri Gold Project

Solstice continues to build and maintain a large **Yarri Project** landholding centred within a gold-endowed and infrastructure-rich area of WA's Eastern Goldfields, 150km NE of Kalgoorlie (**Figure 12**). Yarri has strong opportunities to create shareholder value through considered exploration drilling, particularly below transported cover that may have restricted previous exploration.

The Project currently covers an area of >1,500km^2 and extends over 150km strike along two craton-scale structural corridors that control gold mineralisation in a district hosting company-scale gold systems, as demonstrated by Northern Star Resources' (ASX: NST) **Carosue Dam** Operations, AngloGold Ashanti's (ASX: AGG) **Sunrise Dam** gold deposit, Ramelius Resources' (ASX: RMS) **Rebecca-Roe** Gold Project, and Saturn Mineral's (ASX: STN) **Apollo Hill** Gold Project (**Figure 13**).

With the Company's current focus on the Nanadie Project, an internal group restructure has been completed aimed at assessing opportunities to maximise shareholder value of the Yarri and **Ringlock** Projects (the **Eastern Goldfields Projects**). The Company may consider a potential full or partial sale, or a demerger of those projects from Solstice Minerals, with a distribution of shares in the demerged entity to Solstice Minerals' shareholders. Any demerger would be subject to Solstice Minerals' shareholder approval and other requisite approvals.

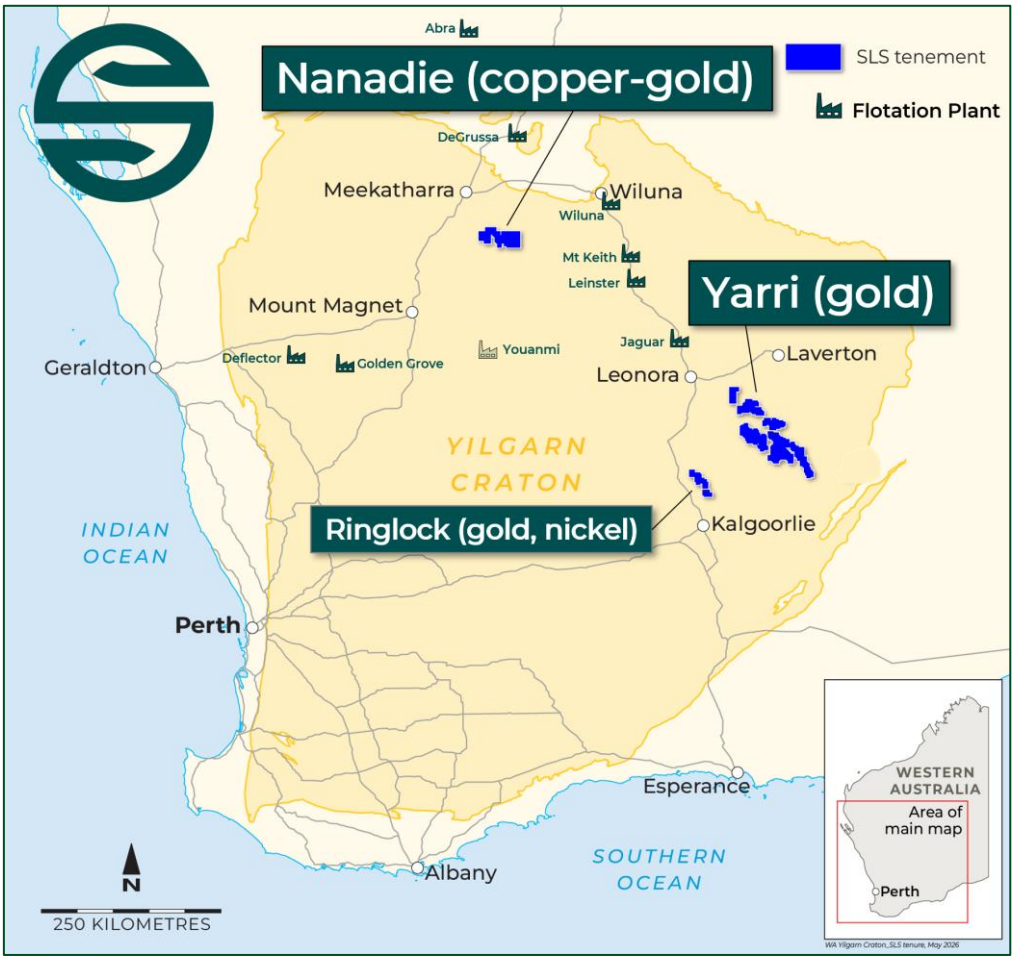

Figure 12: Location of Solstice's West Australian Projects.

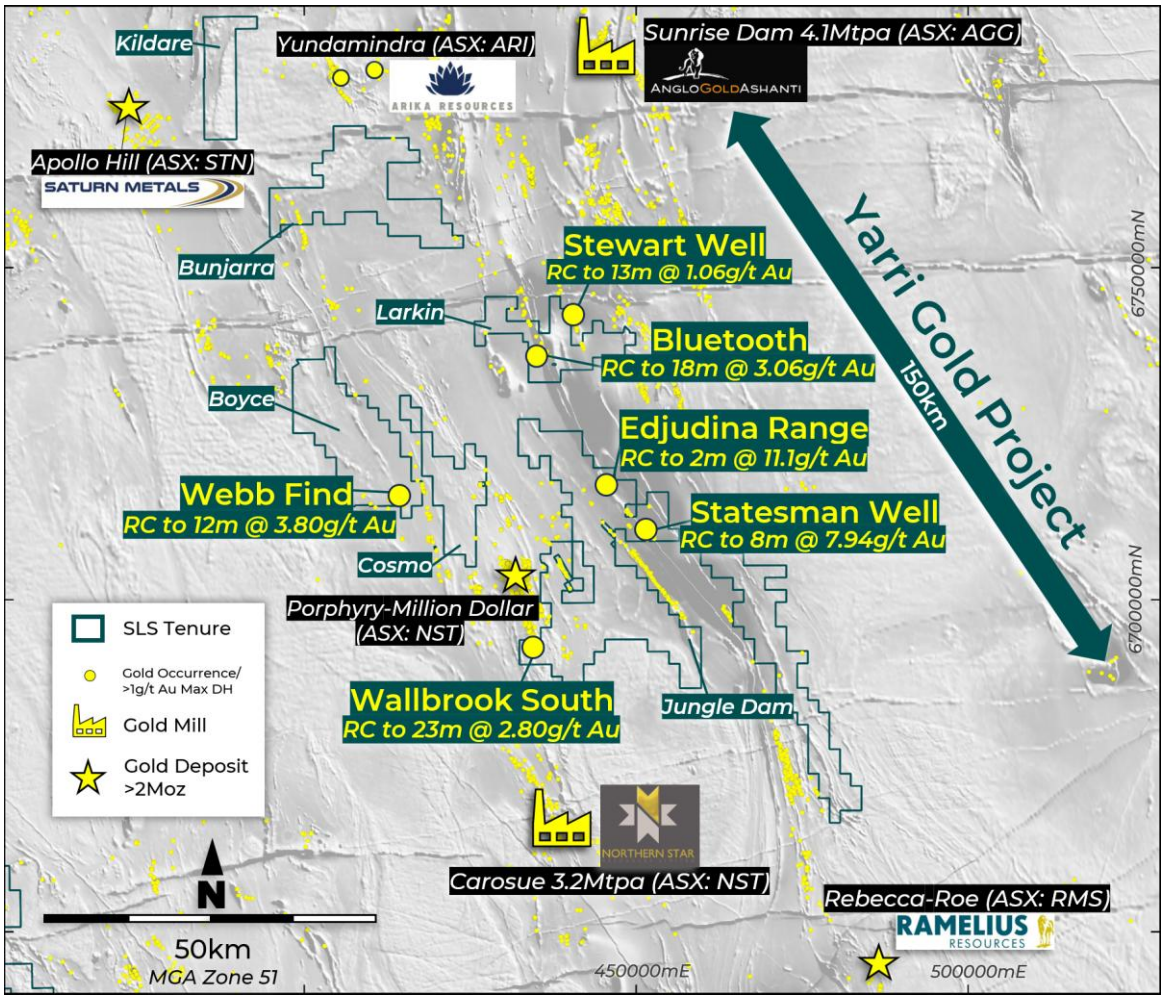

Figure 13: Solstice's >1,500km^2 Yarri Project tenement group and historical intercepts[4] on greyscale aeromagnetic image showing the location of key gold targets, and regional gold developments. Yellow dots are documented gold prospects and all drillholes with >1g/t Au gold intercepts.

In the near-term the Company intends to build on its 2025 exploration successes at advanced prospects such as **Bluetooth**, **Edjudina Range** and **Statesman Well**, and work-up new greenfield gold targets for first aircore drill-testing. Key regional targets will be progressed to heritage clearances in the coming months in preparation for reconnaissance aircore drilling.

Bluetooth Gold Prospect

Preparations were made for continued infill RC drilling at Bluetooth, a prospect that emerged as a new gold discovery over 2025, with the Company's shallow RC drilling outlining thick, shallowly dipping panels of near-surface oxide gold mineralisation.

Gold intercepts extend over a 900m strike extent of mineralised chert and quartz veining (**Figure 14**) and intercepts are interpreted to be close to true width (**Figure 15** and **Figure 16**).

For personal use only

Key RC results include **18m @ 3.06g/t Au** (within a combined **30m @ 2.06g/t Au**), **29m @ 1.58g/t Au**, **20m @ 1.98g/t Au**, **23m @ 1.38g/t Au**, **15m @ 1.90g/t Au** and **12m @ 2.86g/t Au**[5].

The **overall geometry of Bluetooth is favourable for open pit extraction**, and the strong intercepts to date demonstrate the potential for this discovery to provide valuable near-surface gold ounces in an active mining district.

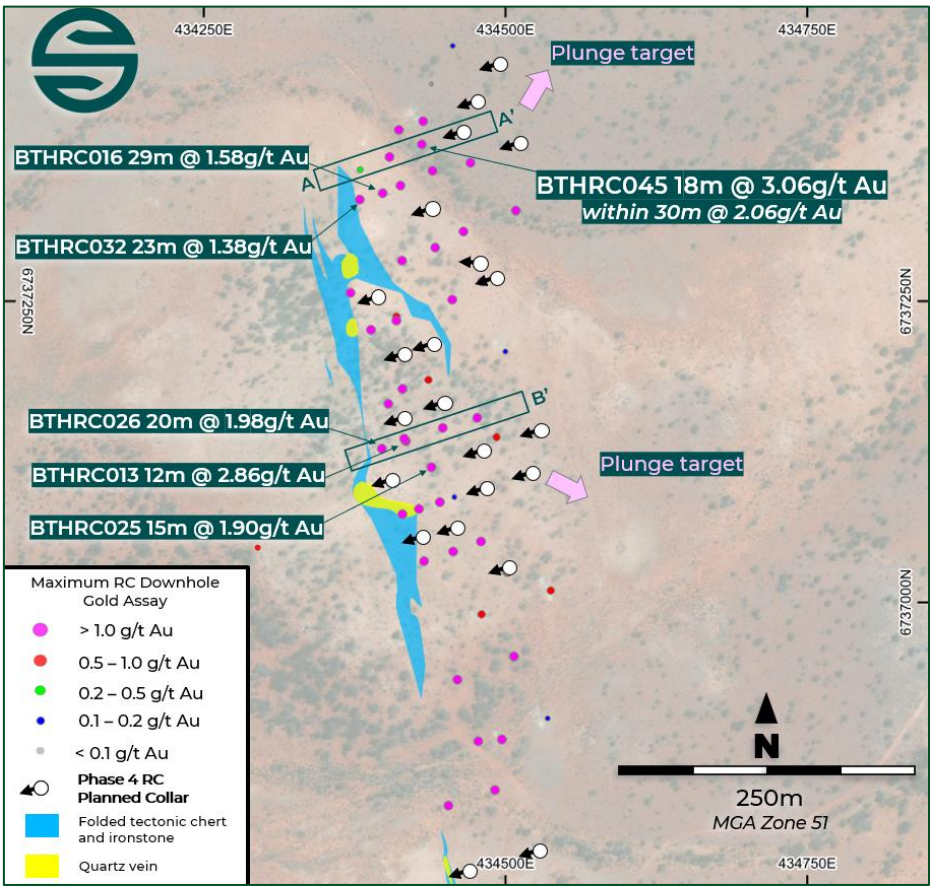

Figure 14: Bluetooth Gold Prospect showing all RC drill collars coloured for peak down-hole gold value, planned Phase 4 RC drillholes, selected gold intercepts[5], and the outcrop of the mineralised chert and ironstone horizon.

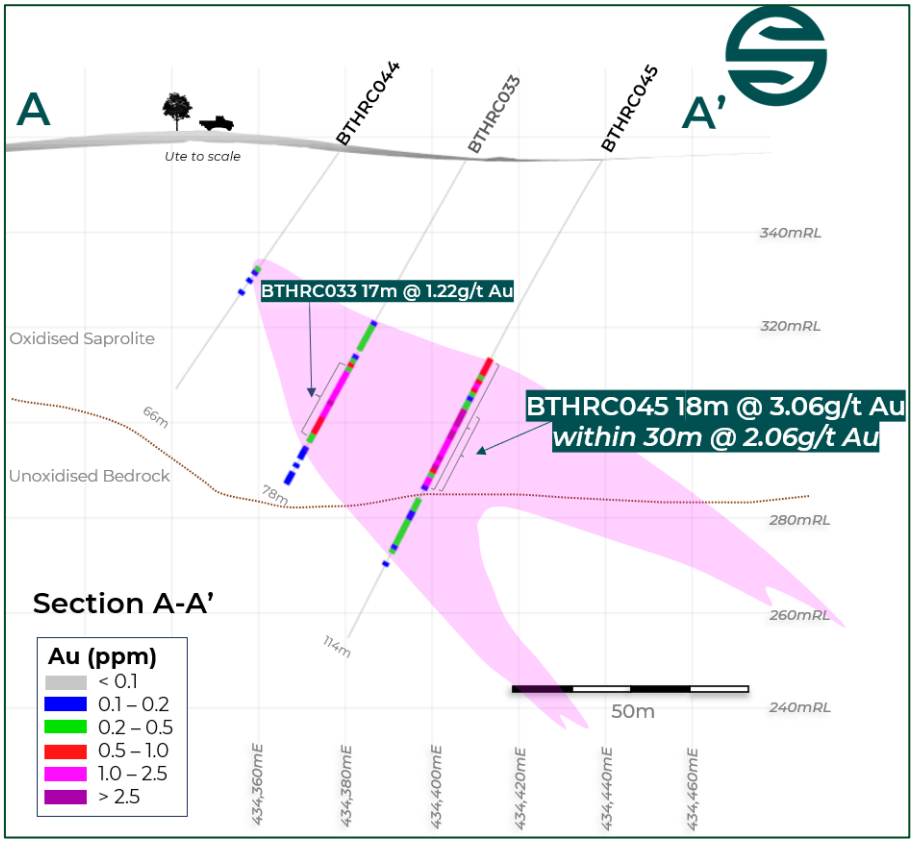

Figure 15: Bluetooth Gold Prospect cross-section A-A' (see Figure 14) showing Solstice's RC gold intercepts (white text)[5].

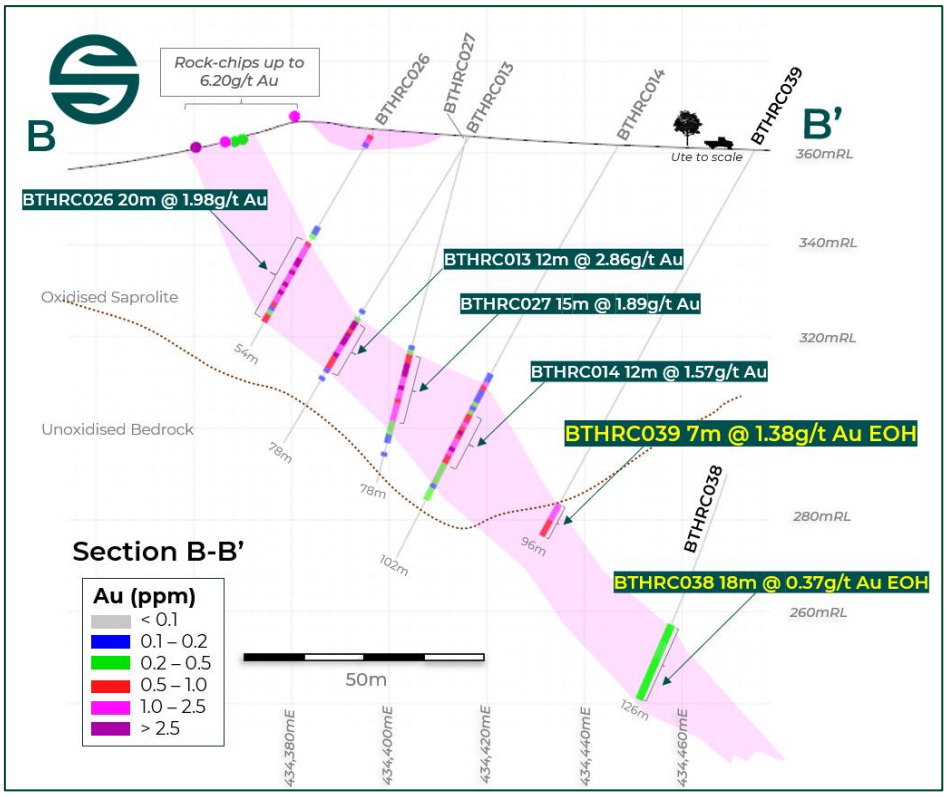

Figure 16: Bluetooth Gold Prospect cross-section B-B' (see Figure 14) showing Solstice's oxide gold intercepts (white text) and fresh rock intercepts (yellow text)[5].

Pipeline Projects

The Company has established a strong pipeline of exploration opportunities both at Yarri and at the **Ringlock Project** near Kalgoorlie (**Figure 12**), and the grant of new tenure has unlocked an array of gold exploration targets, including high-priority untested strike targets at **Edjudina Range** and **Statesman Well**.

Advanced gold targets under exploration licence application at Yarri include **Webb Find** (historical shallow RC results including **12m @ 3.80g/t Au**, **8m @ 2.74g/t Au** and **6m @ 3.85g/t Au**), **Wallbrook South** (RC results to **23m @ 2.80g/t Au**), and **Stewart Well** (wide anomalous gold zones in historical RC drilling to **10m @ 1.06g/t Au**)[4] (**Figure 12**). Each of these targets is primed for additional step-out and/or follow-up RC drilling once permitting is in place.

2. CORPORATE AND CASH POSITION

Solstice holds approximately **$41.3m** in cash as at 30 September 2026.

3. ADDITIONAL ASX LISTING RULE DISCLOSURES

In accordance with ASX Listing Rule 5.3.1, payments for exploration activities during the Quarter totalled $3,749,000 (item 1.2(a) of the Appendix 5B). Details of exploration activities undertaken during the Quarter are provided above.

In accordance with ASX Listing Rule 5.3.2, the Company confirms that there were no mining production and development activities undertaken during the Quarter.

In accordance with ASX Listing Rule 5.3.3, details of tenements are provided in Section 4 below.

In accordance with ASX Listing Rule 5.3.5, the payment of $188,000 reported in Item 6.1 of the Appendix 5B to related parties of the entity and their associates consisted of Directors' fees and salaries (including superannuation) paid to the Directors.

FORWARD-LOOKING STATEMENTS

This Report may contain certain forward-looking statements, guidance, forecasts, estimates, prospects or projections in relation to future matters that may involve risks or uncertainties and may involve significant items of subjective judgement and assumptions of future events that may or may not eventuate (**Forward-Looking Statements**). Forward-Looking Statements can generally be identified by the use of forward-looking words such as "anticipate", "estimates", "will", "should", "could", "may", "expects", "plans", "forecast", "target" or similar expressions and may include, without limitation, statements regarding plans, strategies and objectives of management, anticipated production and expected costs. Indications of, and guidance on future earnings, cash flows, costs, financial position and performance are also Forward-Looking Statements.

Persons reading this Report are cautioned that such statements are only predictions, and that actual future results or performance may be materially different. Forward-Looking Statements, opinions and estimates included in this Report are based on assumptions and contingencies which are subject to change, without notice, as are statements about market and industry trends, which are based on interpretation of current market conditions. Forward-Looking Statements are provided as a general guide only and should not be relied on as a guarantee of future performance.

No representation or warranty, express or implied, is made by Solstice that any Forward-Looking Statement will be achieved or proved to be correct. Further, Solstice disclaims any intent or obligation to update or revise any Forward-Looking Statement whether as a result of new information, estimates or options, future events or results or otherwise, unless required to do so by law.

COMPLIANCE STATEMENT

The information in this Report that relates to previously Exploration Results and Estimates of Mineral Resources has been extracted from the ASX announcements as noted in the References and referenced in the text (**Original Announcements**). In relation to the Company's previously released Exploration Results and Estimates of Mineral Resources, the Company confirms that it is not aware of any new information or data that materially affects the relevant information included in the Original Announcements and, in the case of Estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the Original Announcements continue to apply and have not materially changed. Solstice confirms that the form and context in which the Competent Persons' findings are presented have not been materially modified from the Original Announcements.

8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	11

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer: N/A

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Answer: N/A

For personal use only

8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
Answer: N/A	
Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.	

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 27 October 2026

Authorised by: By the Solstice Minerals Limited Board of Directors
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
