ASX RELEASE | 30 OCTOBER 2026

QUARTERLY ACTIVITIES REPORT FOR PERIOD ENDED 30 SEPTEMBER 2026

HIGHLIGHTS

Lincoln Gold Project ("Lincoln", 100% Interest), USA

- Systematic redevelopment planning advanced, with mining, plant retrofitting options, and tailings disposal options workstreams progressing. These workstreams, together with previous owner studies, other historical information, and new mining and metallurgical studies will be incorporated into a Pre-Feasibility Study to guide the Project's sustainable, long-term development.
- Phase 2 underground drilling commenced in September, comprising 16 diamond holes for approximately 1,500m, targeting improved geological confidence of the southern portion of the Lincoln resource and potentially further resource growth.
- Decline dewatering and upgrading underground electrical and ventilation systems were completed in September to provide access for Phase 2 drilling and providing a safe platform for Lincoln project redevelopment studies.
- Agreement signed in August to acquire surface and mineral rights on two parcels of land totalling 60-acres adjoining Lincoln, which is expected to improve drilling access and provide greater flexibility for underground development and tailings management. The transaction closed on 2 September 2026.
- **Post-quarter:** First drill hole in Phase 2 program returned 32m at 10.4g/t Au from 143m (uphole length, not true-width).

Ibel South Gold Project ("Ibel South", 100% Interest), Senegal

- High-grade RC drilling results reported, including 14m at 7.29g/t Au from 23m and 12m at 5.24g/t Au from 33m, confirming mineralisation identified by earlier aircore drilling.
- Gold mineralisation remains open along strike and at depth, with further targets identified along the northeast corridor, down-plunge of the high-grade shoots and within the southern extension of the alteration corridor.
- Permit renewal application lodged, with further geological assessment and follow-up drill planning to progress during the renewal process.

Corporate

- Mr Patrick Mutz appointed Managing Director and CEO, bringing extensive project development and operating experience.
- Assessment of further Mother Lode consolidation opportunities and strategic pathways to realise value from the Company's Senegal projects continued.
- Work continued towards the proposed name change and rebranding to American West Gold Limited.

CEO & Managing Director, Mr Patrick Mutz commented: *"I am honoured to join Haranga at this exciting time in the Company's development, and I am pleased to present this quarterly report to shareholders as the new CEO. The Lincoln Gold Project represents an exceptional opportunity for Haranga shareholders, where a high-grade gold resource, an*

For personal use only

For personal use only

existing permitted processing plant, and now a de-watered and functional decline provide a solid base from which to build and implement a systematic and sustainable Lincoln redevelopment strategy. I eagerly look forward to the challenge of unlocking the Lincoln project's potential and building sustainable value for shareholders.

Since joining in September, the Board and management team have been working to identify knowledge, information and resources gaps to guide our project redevelopment approach, with the objective of establishing an achievable path to the restart of sustainable operations at Lincoln. One key early decision was to integrate current technical workstreams and previous project studies into a Pre-Feasibility Study or PFS, which will be led by an appropriately qualified independent consultant. Details regarding this decision will be announced separately.

In parallel, work already underway, including our current underground drilling program, is addressing critical prerequisites for a successful redevelopment plan including Improving geological confidence in the Lincoln Resource and gathering the information needed to support resource upgrades, mine planning studies, and metallurgical studies to support a PFS. We continue to gather information and to identify appropriate consultants and contractors to facilitate the variety of studies required for the PFS and I look forward to communicating additional details to shareholders as they become available."

Haranga Resources Limited (ASX:HAR; FRA:65E0; 'Haranga' or 'the Company') is pleased to provide an update on its activities for the September 2026 quarter ('**Quarter**').

Lincoln Gold Project (100% Interest)

During the Quarter, the Company continued to advance its wholly owned Lincoln Gold Project, located in California's legendary Mother Lode Gold Belt, U.S.A (**Figure 1, 2 & 3**). The Project is host to a **JORC compliant Mineral Resource of 2.46Mt @ 5.1g/t Au for 402koz (Table 1)**[1] and benefits from existing permits (including a Conditional Use Permit) and significant historical investment of approximately $90m.[2]

Figure 1: Infrastructure and Processing Plant at the Lincoln Gold Project.

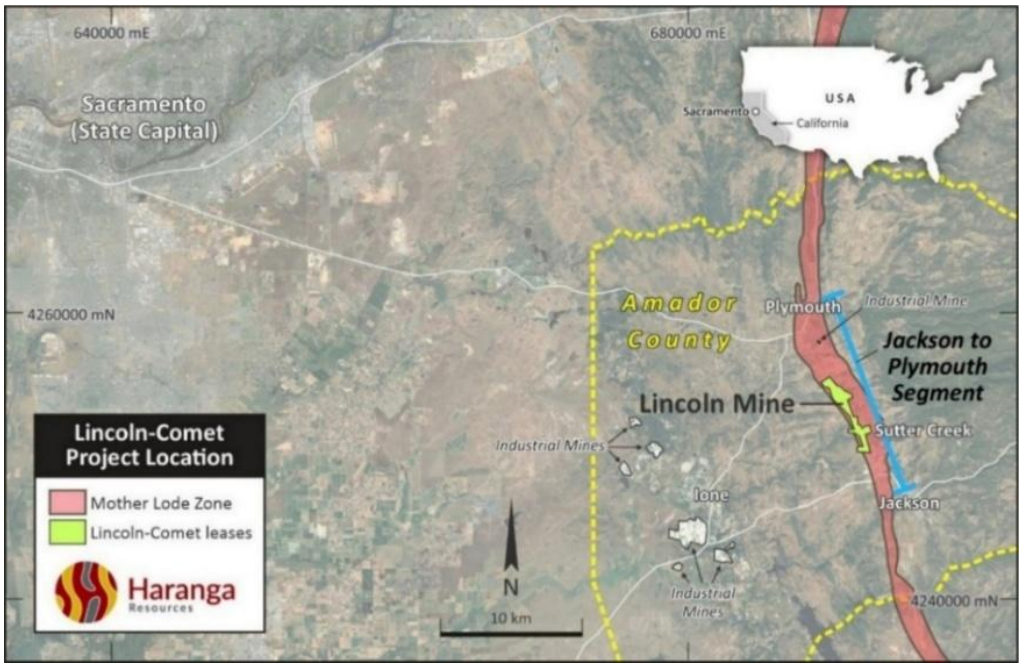

Figure 2: The Project is located Southeast of Sacramento, California, USA. Several significant mines run by US Mine Corporation are active around Ione, where Heavy Mineral Concentrate, Clay and Silica is produced from three separate operations.

Figure 3: Aerial Photo of the Lincoln Gold Mine Infrastructure. The Lincoln Gold Project benefits from historic ~$90m of prior investment.[2]

Area	Classification	Volume (m³)	Density (g/cm³)	Tonnage	Grade (g/t Au)	Ounce Au
Lincoln-Comet	Indicated	165,000	2.6	429,000	6.6	91,000
Lincoln-Comet	Inferred	410,000	2.6	1,068,000	5.4	184,000
Lincoln-Comet	**Total**	**575,000**	**2.6**	**1,497,000**	**5.7**	**275,000**
Medean	Inferred	370,000	2.6	961,000	4.1	127,000
Medean	**Total**	**370,000**	**2.6**	**961,000**	**4.1**	**127,000**
Total		**945,000**	**2.6**	**2,459,000**	**5.1**	**402,000**

Table 1: Lincoln Gold Project MRE[1] Summary Table; 2026 Kriged Model, reported at 2.0 g/t cutoff. NB. All resources are reported depleted for mining voids.

MINING STUDIES, PLANT AUDIT AND RE-DEVELOPMENT INITIATIVES

On 7 August 2026,[3] the Company provided an update on multiple workstreams supporting the further exploration and redevelopment of the Lincoln Gold Project. Haranga noted that mining and milling studies were progressing and were intended to provide an estimate of costs and production profile associated with a commencement of mining and milling at the Lincoln Gold Project.

Within this program a Plant Audit and Restart costing exercise also commenced, with principals of experienced US-based Australian Consultants Strategic Metallurgy and GR Engineering (USA) having been to site in July, tasked with undertaking revision of the Process Flow Sheet, and provision of costs associated with the process circuit. The Process Flow sheet is intended to achieve up to the Conditional Use Permit (CUP) maximum permitted run rate of 1,000 short tons per day (907 metric tonnes).

As previously announced,[4] Haranga believes the use of previously used gravity and flotation technology will be sufficient to provide high recovery of gold from the Lincoln ore. Design work is continuing, with further test work required to finalise outcomes, including comminution (ore crushing and grinding), flotation, tailings filtration and disposal, process water management, and environmental assessment of the tailings for potential classification as benign waste, which is a key driver of the current study, potentially to provide re-purposing of some of the tailings into commercial use.

Concurrently, it was noted that a staged Mining Study exercise was planned with principals of Perth-based consultancy Entech, with a Mining Shape Optimiser (MSO) exercise proposed to establish a possible mining inventory from the recently released JORC compliant Mineral Resource at Lincoln-Comet only. This would include discussion around mining method and mining rate, which has previously been a limiting factor in achieving maximum permitted run-rate for the mill.

On 22 September 2026,[5] the Company announced that these Scoping Study workstreams and the scoping work completed by previous project owners would be folded into a PFS in an effort to reduce the overall study time for Lincoln. The Company is continuing to assess its overall development strategy with a focus on ensuring a successful restart of sustainable, long-term and profitable operations at Lincoln.

PURCHASE AND SALE AGREEMENT

On 17 August 2026,[6] Haranga advised that it has entered into a Purchase and Sale Agreement with California-based property developer Land Club Sutter Creek LLC to acquire the surface rights and all mineral rights over two contiguous properties totalling 60 acres (Figure 4 & 5). The properties are immediately adjacent to Haranga's wholly-owned Lincoln Gold Project and marks the first expansion of the Project's footprint in approximately two decades.

The acquisition is anticipated to provide multiple benefits to Haranga, including improved access for further drilling, development and mining in the immediate vicinity of Lincoln-Comet, together with greater flexibility to efficiently extend the existing decline access north towards Medean, South Spring Hill, and Keystone deposits. The Purchase also allows significant additional flexibility in surface footprint planning for a potential mining operation, particularly in respect of tailings transport and management.

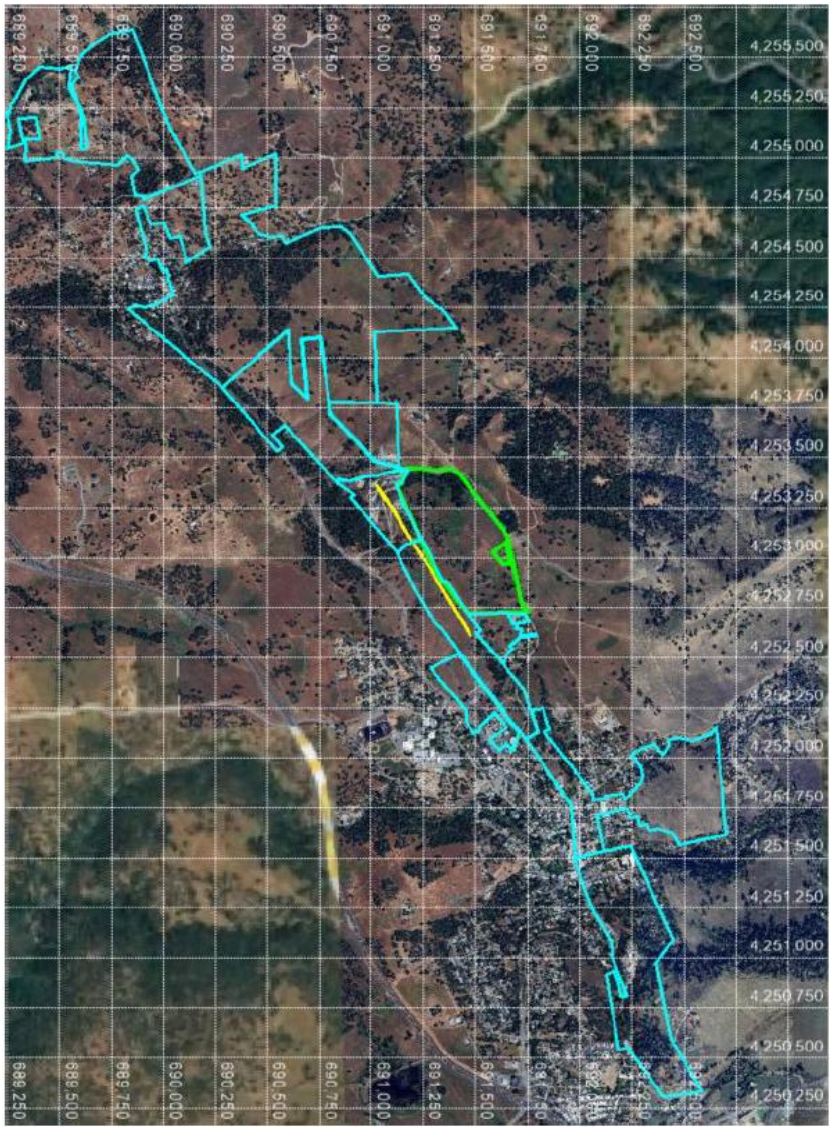

Figure 4: Location of LCSC properties (Green) in relation to all HAR mineral rights (Light Blue-owned/leased) on the Motherlode, totalling around 6km of strike. Location of String Bean Alley Decline highlighted in yellow. Coordinates UTM (WGS84) Zone 10. Refer to Figure 5 below for additional detail.

Figure 5: Location of LCSC properties (Green shaded) in relation to HAR 100% surface and mineral rights (Dark Blue shaded); HAR surface rights and leased mineral rights (Light Blue shaded); HAR surface lease and mineral lease (white shaded); and mineral rights (Light Blue unshaded). Location of String Bean Alley Decline highlighted in yellow. Coordinates UTM (WGS84) Zone 10. Proposed site for possible Surface Fill Unit (SFU)/ Tailings disposal by pipeline slurry and decant return or dry stack via access road (denoted in Tan). Coordinates UTM (WGS84) Zone 10.

As previously announced,[7] an initial deposit of USD$150,000 was paid by the Company within three days of agreement execution dated. The initial deposit became nonrefundable immediately upon execution of the agreement. Further, closing consideration of US$450,000 adjusted for credits and any prorations and closing costs plus the reimbursable seller costs of around USD$33.7k was paid on the closing date of 2 September 2026.

PHASE 2 DRILLING PROGRAM

Details of the Drilling Program

On 9 September 2026,[8] Haranga advised that the design of the Phase 2 drilling program had been finalised and drilling contractor Swick's drill rig was scheduled to arrive to commence drilling at Lincoln. The drilling program consists of 16 HQ diamond holes for 1500m total (DDH0294-DDH0309; Figure 6).

[7] Refer to announcement "Interim Report - 30 June 2026" released on the ASX on 10 September 2026
[8] Refer to announcement "Phase 2 Underground Drilling Set to Commence at Lincoln" released on the ASX on 9 September 2026

For personal use only

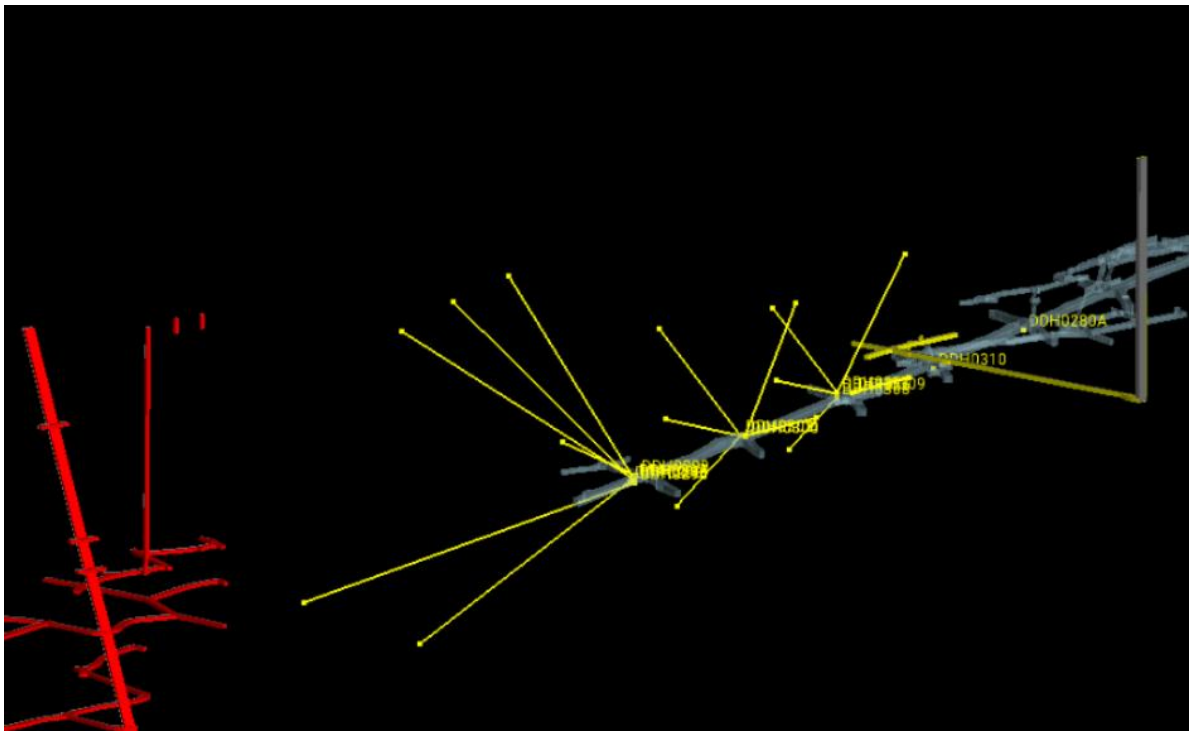

Figure 6: Phase 2 Drilling Program – viewed towards an azimuth of 283°. Stringbean Alley Decline in grey, Old Lincoln workings in Red, Mutual shaft and crosscut in grey and yellow.

The program was planned to commence at XC11, and has been designed to:

- Intersect multiple interpreted mineralised lodes within the southern portion of the Lincoln Resource,[1]
- improve confidence in the geological model approaching the historical Old Lincoln workings; and,
- provide additional information on the orientation of mineralisation and the relationship between the interpreted structural domains.

Drilling is then planned to retreat out to XC10 and XC9 with shorter fan holes. These holes will target an under-drilled section of the model between the Lincoln and Comet zones. No underground drilling has previously been completed from XC10, resulting in comparatively limited drill information in this part of the current model.

Drilling Commenced

On 22 September 2026,[9] Haranga announced that Swick's underground diamond drill rig was onsite at the Lincoln Project and drilling of DDH0294 commenced at XC11 on 17 September (Figure 7). It was noted that this initial hole is the longest of the program (~230m hole) and was near completion.

[9] Refer to announcement "Phase 2 Underground Drilling at Lincoln Commenced" released on the ASX on 22 September 2026

For personal use only

Figure 7: Drilling of DDH0294 commenced at cross-cut 11 (XC11), 17 September 2026 (PST).

Drilling Program Objectives[10]

The primary objective of Phase 2 drilling program is to improve geological confidence and knowledge of Lincoln's JORC Mineral Resources. This is anticipated to enable, in time, the reclassification of portions of the JORC Inferred Resources to Indicated Resources. Presently, 77% of contained gold ounces in Lincoln's Mineral Resource Estimate falls within the Inferred Resources category.

The secondary objective of the drilling program is to incrementally expand total Mineral Resources and support potential future Ore Reserve growth, with the aim of establishing sufficient mine life to justify and attract project capital funding.

Per the JORC Code 2012, Indicated Resources are the minimum classification of Mineral Resources that can be converted to Ore Reserves with the completion of a minimum of a Preliminary Feasibility Study (PFS). This PFS is anticipated to commence as an extension of the Scoping Study work which is currently underway.

The drilling program forms part of Haranga's broader plan to systematically redevelop the Lincoln Gold Project. The program has been made possible due to the extensive de-watering that the Company undertook between the September 2025 – September 2026 period.

POWER INFRASTRUCTURE AND UNDERGROUND DEWATERING

On 9 September 2026,[11] Haranga advised that it had received and installed the new Mine Power Centre (MPC) at XC7 (Figure 8). The MPC will provide power for Phase 2 drilling and has the capacity to support future underground development and mining activities.

[10] Refer to announcement "Phase 2 Underground Drilling at Lincoln Commenced" released on the ASX on 22 September 2026
[11] Refer to announcement "Phase 2 Underground Drilling Set to Commence at Lincoln" released on the ASX on 9 September 2026

For personal use only

Figure 8: New underground Mine Power Centre installed at XC7.

In addition, dewatering of the Stringbean Alley decline and level development areas was completed. Haranga noted that activities were focused around sludge removal and improving the basal sump/base of the decline for future use.

Haranga considers the decline to be a significant project asset, providing direct underground access to the high-grade Lincoln mineralised system and a platform for the efficient evaluation and potential future redevelopment of the Lincoln Gold Project.

SOUTH SPRING HILL SAMPLE REPROCESSING AND CONVERSION

As previously announced,[12] Haranga had identified and isolated residual pulps and half-core from two historical diamond drillholes, KDH-0020 and KDH-0021, which intersect the South Spring Hill mineralised system, including the interpreted hanging wall and footwall lodes. The historical drillhole results include:

- KDH-0020 – Interval of 5.3m at 1.30g/t Au from 327.1m with a true width of 3.6m.
- KDH-0021 – Interval of 10.2m @ 8.91g/t Au from 305.1m with a true width of 5.4m.
- KDH-0021 – Interval of 4.8m @ 2.62g/t Au from 319.9m with a true width of 2.6m.

During the Quarter,[13] Haranga announced that it had reprocessed the core to provide quarter core for assay and comparison with original results to support the conversion of the Exploration Target to an Inferred resource. It was noted that the Company expects to report the new assay results and, subject to satisfactory validation and completion of the required resource modelling, is targeting an updated Lincoln Mineral Resource Estimate incorporating South Spring Hill.

[12] Refer to announcements "EXPLORATION TARGET HIGHLIGHTS RESOURCE GROWTH POTENTIAL AT LINCOLN GOLD PROJECT" released on the ASX on 24 March 2026 and "Due Diligence Sampling of Historic Drill Core and Pulps Confirm Exceptional High Grade Gold Assays" released on the ASX on 7 July 2025

[13] Refer to announcement "Phase 2 Underground Drilling Set to Commence at Lincoln" released on the ASX on 9 September 2026

The South Spring Hill Exploration Target is: 1.16Mt – 1.64Mt @ 5.4 – 5.8g/t Au for 202k-308koz Au*,[14]

***Cautionary Statement:** The potential quantity and grade depicted in the South Spring Hill Exploration Target are conceptual in nature, as there has been insufficient exploration to estimate a Mineral Resource and it is uncertain if further exploration will result in the estimation of a Mineral Resource.
- Further surface and/or underground diamond drilling, subject to access being secured, is planned within the next two years.
- The Exploration Target sits within a package of owned and leased mineral claims which form the Lincoln Gold Project, which has both underground accesses, a conditional use permit that allows production of gold, and a mill circuit which produced gold as recently as 2022.
- Refer to the JORC Table of the 24 March 2026 ASX release for further information.

BACKS SAMPLING AND HISTORICAL DATA VALIDATION

During the Quarter,[15] the Company announced that it had commenced systematic backs sampling of available development material within Lincoln. This program is based on the substantial historical channel-sampling database collected between 1989 and 2013, which was obtained by Haranga upon the acquisition of the Lincoln Gold Project.

Backs sampling is anticipated to continue during the Phase 2 drilling program. Subject to the results, completion of drilling and receipt of the associated assay results, the information will be considered for inclusion in a further updated Lincoln Mineral Resource Estimate later in CY2026.

PHASE 1 PHOTONASSAY™ PROGRAM

During the Quarter,[16] the Company announced that it had prepared approximately 50 samples from its completed Phase 1 underground drilling program for PhotonAssay analysis at a commercial laboratory in Sparks, Nevada. The selected samples primarily represent intervals that returned grades greater than 10g/t Au.

PhotonAssay provides a complementary analytical technique using an approximately 500g sample charge and is being used to assess the repeatability of the high-grade results within Lincoln's coarse-gold mineralisation.

In an earlier Lincoln pilot program, six high-grade samples returned PhotonAssay results equivalent to 94–102% of the corresponding screen-fire values, including close replication of samples grading up to 59.4g/t Au by screen fire.

The Company will report the results of the expanded PhotonAssay program as they become available.

POST-QUARTER EVENT: FIRST HOLE OF PHASE 2 DRILLING PROGRAM

Following the end of the Quarter, on 16 October 2026,[17] Haranga reported that the first hole of its Phase 2 underground diamond drilling program, hole DDH0294, returned a highlight interval of 32m at 10.4g/t Au from 143m.[18] The highlighted interval returned 13 assays exceeding 10g/t Au, with peak of 1m at 51.4g/t Au, confirming the genuine high-grade nature of the mineralisation. The outcome enhances and potentially merges thinner modelled zones in the vicinity.

[14] Refer to announcement "EXPLORATION TARGET HIGHLIGHTS RESOURCE GROWTH POTENTIAL AT LINCOLN GOLD PROJECT" released on the ASX on 24 March 2026
[15] Refer to announcement "Phase 2 Underground Drilling Set to Commence at Lincoln" released on the ASX on 9 September 2026
[16] Refer to announcement "Phase 2 Underground Drilling Set to Commence at Lincoln" released on the ASX on 9 September 2026

For personal use only

Ibel South Gold Project (100% Interest)

The Ibel South Gold Project is located southwest of Kedougou and is within easy access from Haranga's Saraya camp. The permit covers part of the Birimian Belt that further north hosts Resolute's (ASX:RSG) Mako Gold Mine and along strike of the lithology that further to the NNE hosts the Massawa and Sabodala Gold Mines, all of which are in operation (Figure 9).

Ibel South is a 100% Haranga owned permit for gold exploration. Previous results from termite mound sampling outlined a number of zones anomalous for gold (Figure 10).[19]

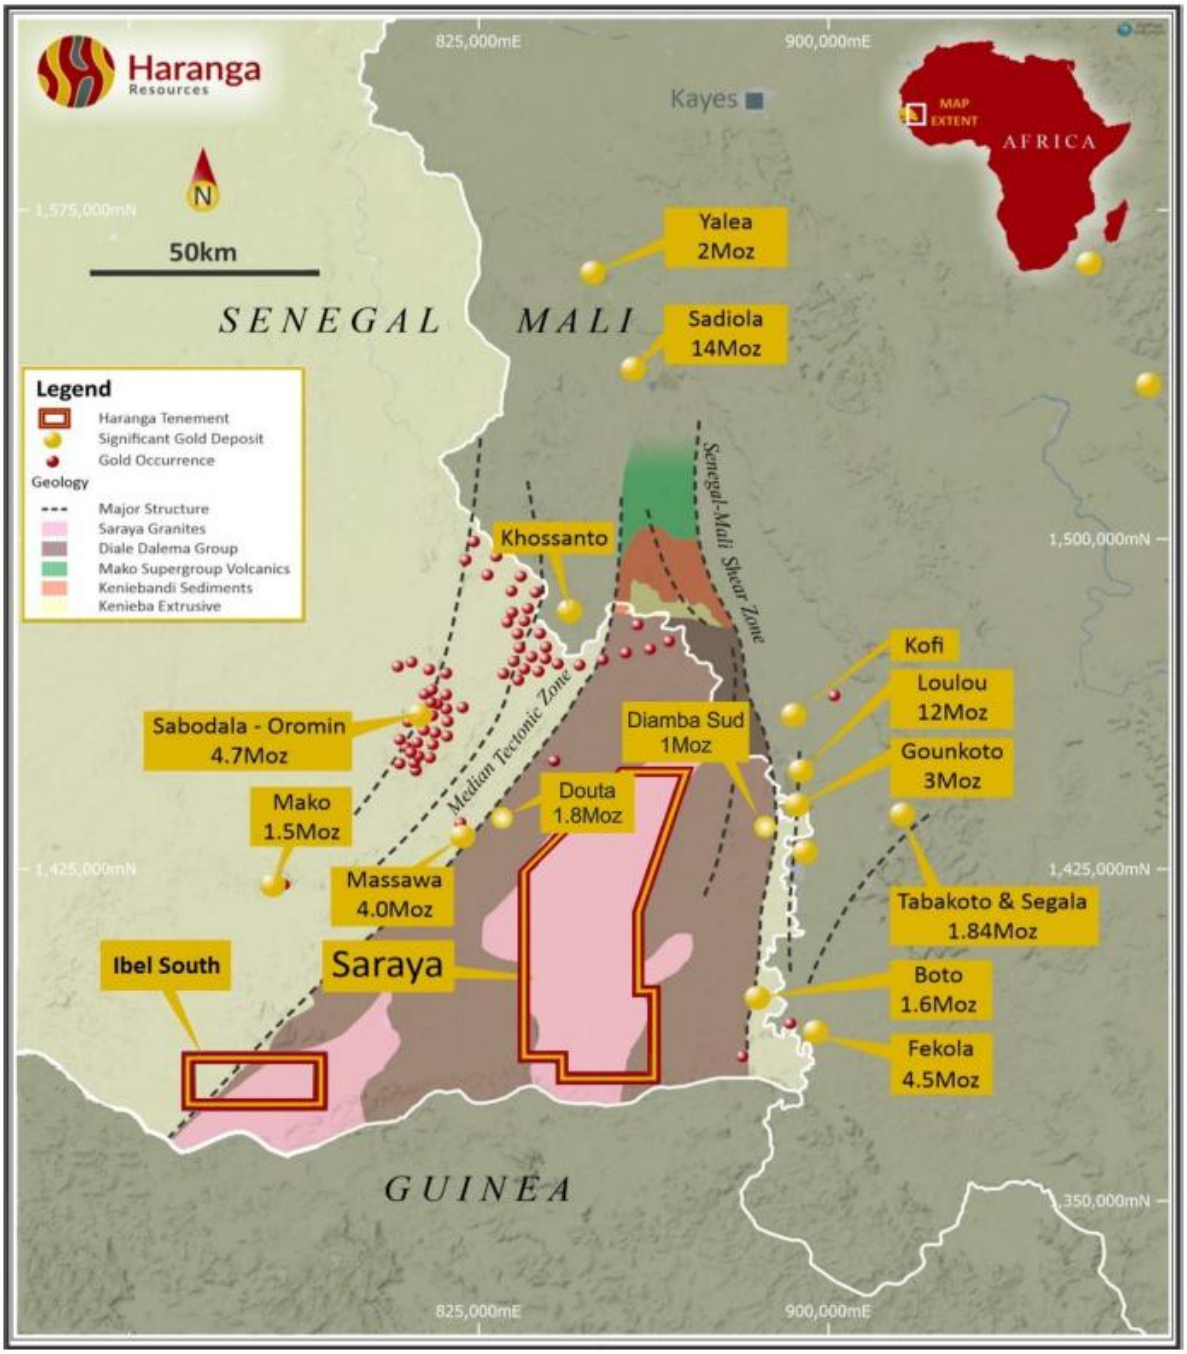

Figure 9: Ibel South location in relation to Haranga's projects and regional gold occurrences.

[19] Refer to announcement "Geochemical survey yields walk-up drill targets" released on the ASX on 3rd of July 2023

For personal use only

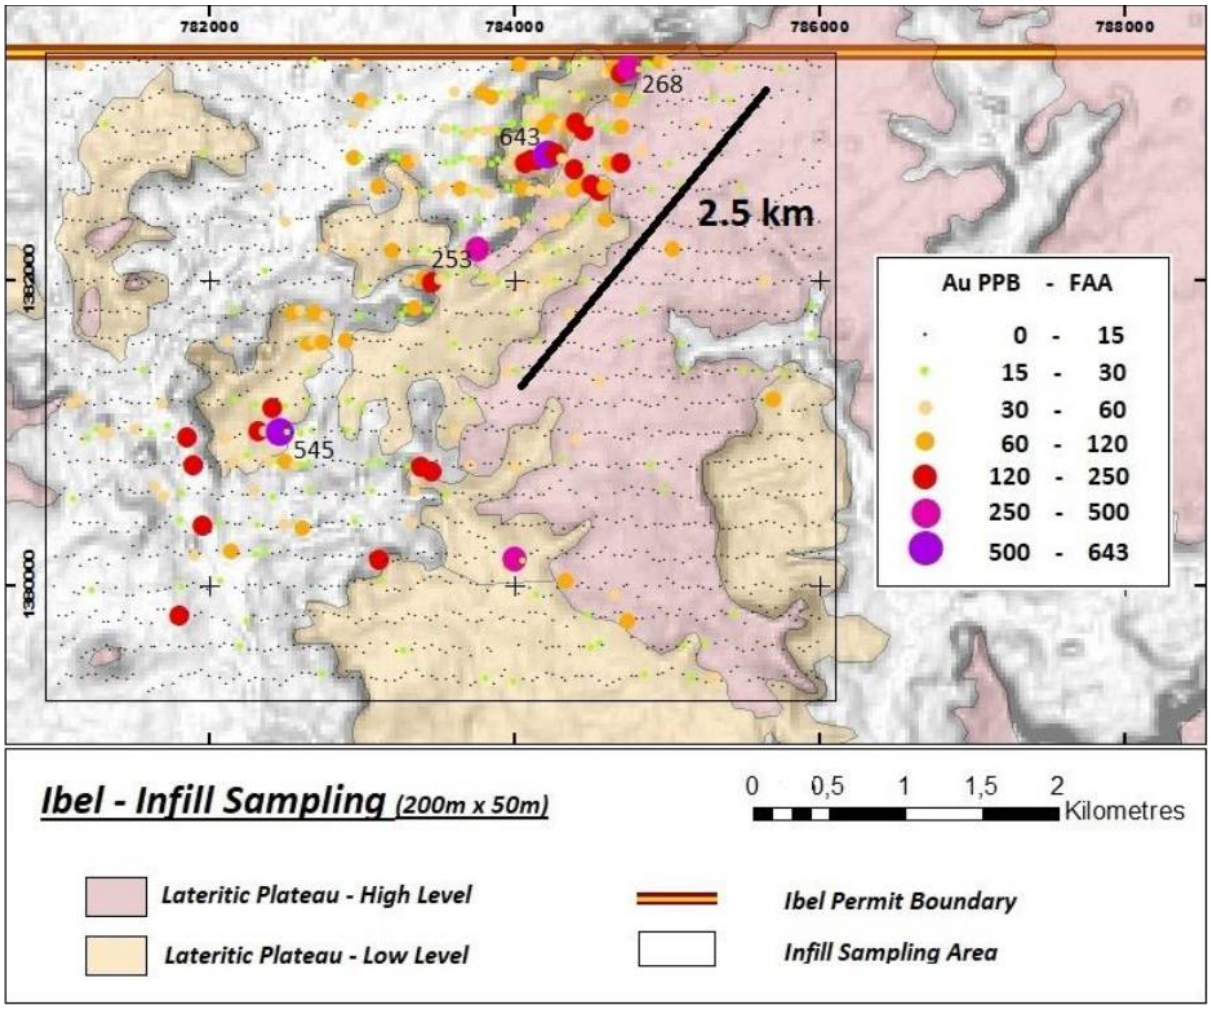

Figure 10: Gold concentrations in samples of termite mounds taken by Haranga field teams in Q1 of 2023. The results confirmed and outlined in more detail the previously known gold anomaly. Gold concentrations of up to 643 ppb were detected.[18]

PHASE 3 RC DRILLING PROGRAM

On 13 July 2026,[20] Haranga reported assay results from the completed RC drilling program (Table 2, Figure 11). A total of 864 one-metre samples were selected from the most intensely altered intervals identified during systematic geological logging of the RC chips, and were dispatched to MSA Labs (Bamako, Mali) for non-destructive Photon Assay analysis. The remaining intervals along the 3,244 m of drill holes, which were visually identified during logging as showing no significant hydrothermal alteration, were not prioritised for analysis and thus were not announced.

The results supported the following findings:[19]

- 26-IBS-RC0001: **14m at 7.29 g/t Au** from 23m, including **1m at 17.10 g/t Au**. The result directly confirms the previously reported spectacular AC intercept 25-IBS-AC-008 **20m @ 6.0g/t Au from 12m**, including **4m at 14.1g/t Au**, at the north shoot located at TMS Anomaly 3.
- 26-IBS-RC0005: **12m at 5.24 g/t Au** from 33m, including **1m at 23.29 g/t Au**, the highest-grade result of the RC program. The result confirms and extends at depth the south shoot defined by previous drilling 25-IBS-AC-016 (**12m @ 6.12g/t Au**

[20] Refer to announcement "Shallow High-Grade Gold Confirmed in Mineralised Corridor" released on the ASX on 13th July 2026

For personal use only

from 42m, including **7m @ 10.05g/t Au** (**hole ended in mineralisation**) and 25-IBS-AC-017 (**7m at 9.06 g/t Au from 7m**).

- 26-IBS-RC0018: **11m at 1.78 g/t Au** from 69m, including **1m at 5.12 g/t Au**, with **brecciated and partially gossanous quartz vein-hosted mineralisation** documented in a transition zone where partially saprolitised material alternates with fresh bedrock.
- 26-IBS-RC0014: The satellite southwest target associated with 25-IBS-AC-033 (previously returned **1m at 28.93g/t Au** from 23m) was tested by RC0014. No significant mineralisation was intersected in the direction tested, and the source of the high-grade surface result remains to be resolved by future work.

Further, the results supported the view that the gold-bearing system remains open along strike and at depth, given the following factors:

#1: Results at Depth

- 26-IBS-RC0003: **1m at 2.14 g/t Au at 173m down-hole** (~150m vertical), representing isolated low-grade gold intersections reported at **significant depth**.
- 26-IBS-RC0017: **1m @ 0.93 g/t Au at 279m down-hole** (~240 m vertical).

#2: NE Corridor

- 26-IBS-RC0013: **7m @ 1.23g/t Au** from 76m, including **1m at 4.85g/t Au**, extending the defined N10-15°E corridor to the northeast. The corridor remains open beyond RC0013 as the principal untested extension area.

#3: Broader Fertile Alteration Corridor

- RC drilling has defined a broad alteration corridor carrying anomalous gold values, **typically 50-200 ppb Au**, distributed along strongly altered, quartz-veined and pyrite-bearing structures.
- Surface geochemistry and structural mapping indicate that these structures and associated gold anomalism extend up to **approximately 2km south** of the drilled prospect area, materially increasing the footprint of the mineralised system to be tested.

Hole-ID	Line	From (m)	To (m)	Length (m)	Au (g/t)	Max Au (g/t)	Context
26-IBS-RC-0001	3	23	37	14	7.29	17.10	Confirms 25-IBS-AC-008 (north shoot, 20m @ 6.0 g/t Au from 12m)
26-IBS-RC0001	3	42	50	8	0.76	1.40	Additional mineralisation below main intercept
26-IBS-RC0003	5C	173	174	1	2.14	2.14	Isolated deep intersection (~150 m vertical)
26-IBS-RC0005	5A	33	45	12	5.24	23.29	Confirms south shoot (25-IBS-AC-016/AC-017); highest grade of programme
26-IBS-RC0013	3	76	83	7	1.23	4.85	Northeast extension of the corridor; remains open
26-IBS-RC0018	4	69	80	11	1.78	5.12	Brecciated/gossanous quartz vein in supergene-to-primary transition zone

Table 2: Significant gold intersections from the Phase 3 RC drilling program at Ibel South, at a 0.2 g/t Au cutoff with a maximum of 2 m of consecutive internal dilution. All depths are downhole; true widths are not known (refer to the JORC Code 2012 Table 1 issued separately). All assays performed by MSA Labs (Bamako, Mali) using non-destructive Photon Assay (Chrysos PhotonAssay™). One additional isolated 1 m result of 0.93 g/t Au was returned at 279 m downhole in hole 26-IBS-RC0017 (~240 m vertical depth); this result does not form a composite at the 0.2 g/t Au cutoff, but is reported here for completeness in view of its depth.[19]

For personal use only

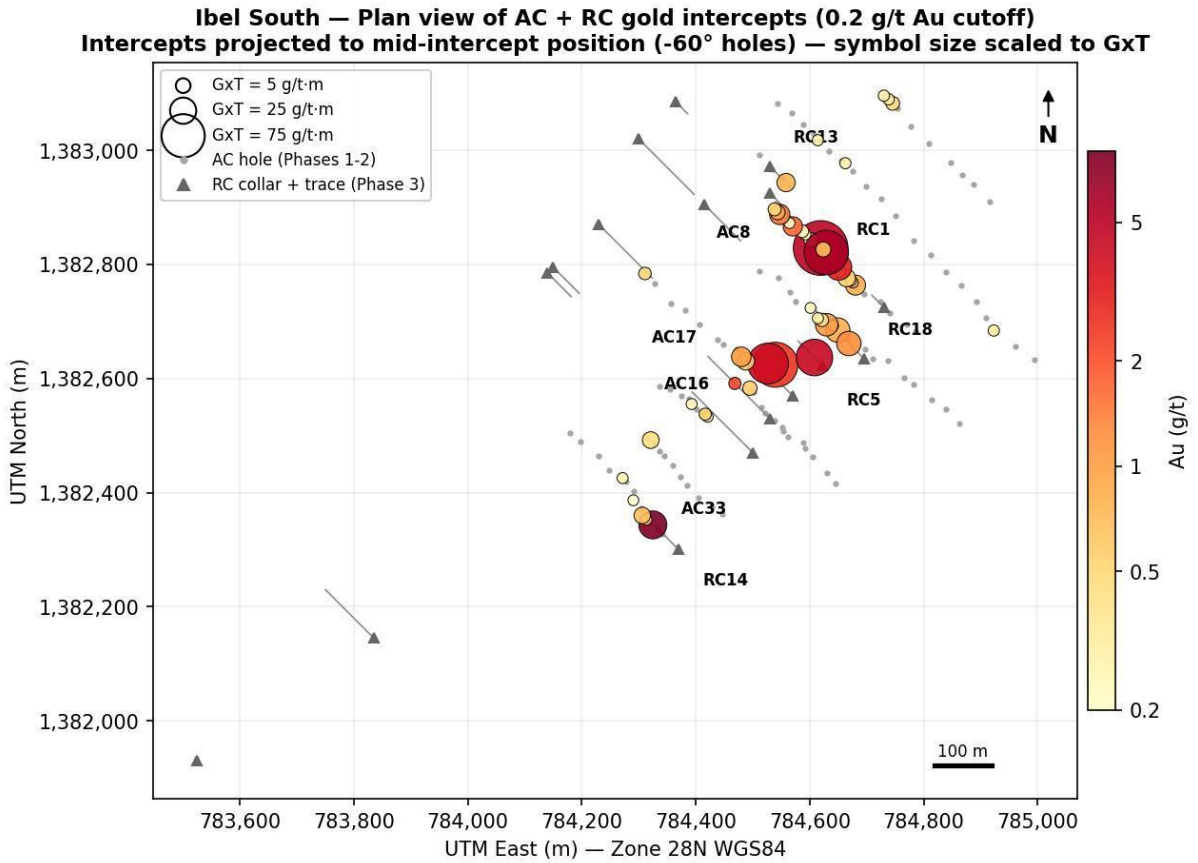

Figure 11 – Plan view of combined Phase 1-2 Aircore and Phase 3 RC gold intercepts (0.2 g/t Au cutoff); symbol size scaled to grade-thickness (GxT, g/t·m), colour scaled to gold grade.[19]

In addition, Haranga advised that the Ibel South permit renewal application has been lodged with the Senegalese authorities.

During the permit renewal process, a further detailed assessment of all geological data and a follow-up drill plan targeting the open northeast extension of the corridor, the untested down-plunge positions of the high-grade shoots, and the southern extension of the alteration corridor, will be undertaken.

Corporate

APPOINTMENT OF NEW CEO & MD

During the Quarter,[21] the Company continued its search for a new CEO and Managing Director to lead the redevelopment of the Lincoln Gold Project. Interviews focused on candidates with a proven track record of bringing resources projects into production.

On 1 September 2026,[22] Haranga announced that Mr Patrick Mutz, an internationally experienced project development executive, has joined the Company as its Managing Director and CEO. In conjunction with the appointment, Haranga's Executive Chairman, Mr Michael Davy, transitioned to a Non-Executive Chairman role.

Mr Mutz is a mining executive with more than 30 years' industry experience, including over 20 years as a Managing Director and Chief Executive Officer. His career encompasses exploration, project development, construction, commissioning, production and

[21] Refer to announcement "Drilling and Rapid Restart Initiatives Advance at Lincoln" released on the ASX on 7 August 2026
[22] Refer to announcement "NEW MANAGING DIRECTOR & CEO" released on the ASX on 1 September 2026

For personal use only

operational optimisation, together with capital raising, corporate leadership and stakeholder management.

Prior to his appointment at Haranga, Mr Mutz served as Managing Director and CEO of Image Resources NL (ASX:IMA), where he led the Company's transition from advanced developer to producer. He secured A$75 million in debt and equity funding, delivered construction on time and on budget and achieved nameplate production within two months of first production. Image subsequently achieved five consecutive years of profitable production, repaid its debt early and established a dividend-paying business through which approximately A$40 million was returned. During his tenure, the Company's market capitalisation increased from approximately A$15 million to a high of approximately A$275 million. He also led an A$36 million acquisition that expanded Image's resource base by approximately twenty-fold.

Mr Mutz previously served as CEO of Murray Zircon Pty Ltd, where he led the development, operation and optimisation of a mineral sands project. As Managing Director and CEO of Deep Yellow Limited (ASX:DYL), he repositioned the company's Namibian uranium assets towards development and oversaw an increase in the Company's market capitalisation from approximately A$140 million to a high of approximately A$420 million within a 6-month period.

He has also served as Managing Director and CEO of Alliance Resources Limited (ASX:AGS), where he raised A$47 million and advanced the company from exploration towards production readiness, including at its Victorian gold asset. At Uranium Exploration Australia Limited, he built an exploration team and participated in an international joint venture with Reliance Industries of India.

Earlier in his career, Mr Mutz held senior leadership roles with General Atomics, Heathgate Resources and Chevron. He was directly involved in the pilot-to commercial transition of Beverley ISL uranium operation, representing Australia's first commercial ISL uranium operation.

Mr Mutz holds an MBA in Global Business Management and a BS (Honours) and is a Fellow of the Australasian Institute of Mining and Metallurgy (FAusIMM). He is a United States citizen and an Australian permanent resident.

OTHER CORPORATE ACTIVITIES

During the Quarter,[23] the Company continued the following corporate activities;

1) Assessment of further consolidation opportunities along the Mother Lode Belt.
2) Assessment of strategic pathways to realise value from the Company's Senegal projects, including Ibel South and Saraya.
3) Name change and rebranding to American West Gold Limited.

INTERIM REPORT

On the 10 September 2026,[24] Haranga released its interim report for the period ending 30 June 2026.

[23] Refer to announcement "Drilling and Rapid Restart Initiatives Advance at Lincoln" released on the ASX on 7 August 2026
[24] Refer to announcement "Interim report - 30 June 2026" released on the ASX on 10 September 2026

Summary of Expenditure

At 30 September 2026, Haranga and its subsidiaries held $3.33m in cash reserves. Further details can be found in the Appendix 5B released with this announcement.

Of the total expenditure of the Company during the quarter, $1.34m of the Company's expenditure was on activities related to the exploration and development of the current projects as detailed in the Cashflow Report (5B) appended to this report. The Company did not incur any expenditure related to mining, production and development activities during the Quarter.

Payments totalling approximately $97k were paid to the Directors for fees relating to the present Quarter (section 6.1 of the accompanying 5B).

Tenement Table: ASX Listing Rule 5.3.3

Mining tenement interests held at the end of the quarter and their location

Tenement reference location	Nature	Status	Interest	Target interest
PR 02208, Senegal	JV	Granted	70%	Haranga has acquired 70% interest from Mandinga Resources who own 100% of the Saraya project. The Vendor has a 30% free carry to PFS. After PFS the Vendor will have to contribute to cost or dilute to royalty.

Lincoln - Mineral Resource[29]

The Company confirms it is not aware of any new information or data that materially affects the information included in the Mineral Resource estimate and all material assumptions and technical parameters underpinning the estimate continue to apply and have not materially changed when referring to its resource announcement made on 25 May 2026. The Company confirms that the form and context in which the Competent Person's finding is presented have not been materially modified from the original market announcements.

Lincoln - Mineral Resource Estimate[30]

The resource as reported at 25 May 2026 is as follows:

Area	Classification	Volume (m^3)	Density (g/cm^3)	Tonnage	Grade (g/t Au)	Ounce Au
Lincoln-Comet	Indicated	165,000	2.6	429,000	6.6	91,000
Lincoln-Comet	Inferred	410,000	2.6	1,068,000	5.4	184,000
Lincoln-Comet	**Total**	**575,000**	**2.6**	**1,497,000**	**5.7**	**275,000**
Medean	Inferred	370,000	2.6	961,000	4.1	127,000
Medean	**Total**	**370,000**	**2.6**	**961,000**	**4.1**	**127,000**
Total		**945,000**	**2.6**	**2,459,000**	**5.1**	**402,000**

Table 1: Lincoln Gold Project MRE Summary Table; 2026 Kriged Model, reported at 2.0 g/t cutoff. NB. All resources are reported depleted for mining voids.

Saraya - Mineral Resource[31]

The Company confirms it is not aware of any new information or data that materially affects the information included in the Mineral Resource estimate and all material assumptions and technical parameters underpinning the estimate continue to apply and have not materially changed when referring to its resource announcement made on 27 August 2024. The Company confirms that the form and context in which the Competent Person's finding is presented have not been materially modified from the original market announcements.

Saraya - Mineral Resource Estimate[32]

The resource as reported at 27 August 2024 is as follows:

Classification	Tonnage	Grade	Contained eU_3O_8	
	Mt	eU_3O_8 ppm	Mlbs	Tonnes
Indicated	4.1	740	6.7	3,038
Inferred	10.4	475	10.9	4,946
Total	14.5	550	17.6	7,984

Disclaimer

Forward-looking statements are statements that are not historical facts. Words such as "expect(s)", "feel(s)", "believe(s)", "will", "may", "anticipate(s)", "potential(s)"and similar expressions are intended to identify forward-looking statements. These statements include, but are not limited to statements regarding future production, resources or reserves and exploration results. All of such statements are subject to certain risks and uncertainties,

For personal use only

many of which are difficult to predict and generally beyond the control of the Company, that could cause actual results to differ materially from those expressed in, or implied or projected by, the forward-looking information and statements. These risks and uncertainties include, but are not limited to: (i) those relating to the interpretation of drill results, the geology, grade and continuity of mineral deposits and conclusions of economic evaluations, (ii) risks relating to possible variations in reserves, grade, planned mining dilution and ore loss, or recovery rates and changes in project parameters as plans continue to be refined, (iii) the potential for delays in exploration or development activities or the completion of feasibility studies, (iv) risks related to commodity price and foreign exchange rate fluctuations, (v) risks related to failure to obtain adequate financing on a timely basis and on acceptable terms or delays in obtaining governmental approvals or in the completion of development or construction activities, and (vi) other risks and uncertainties related to the Company's prospects, properties and business strategy. Investors are cautioned not to place undue reliance on these forward-looking statements that speak only as of the date hereof, and the Company does not undertake any obligation to revise and disseminate forward-looking statements to reflect events or circumstances after the date hereof, or to reflect the occurrence of or non-occurrence of any events.

About Haranga Resources

Haranga Resources is a gold exploration and development company with assets across California's legendary Mother Lode Gold Belt and Senegal's Kéniéba Inlier. In California, the Company has recently defined its maiden mineral resource of 2.46Mt @ 5.1 g/t Au for 402koz, at its high-grade Lincoln Gold Project, which benefits from significant existing infrastructure and is fully permitted for mining.

In Senegal, Haranga holds the highly prospective Ibel South Gold Project, which has returned high-grade near-surface gold mineralisation from drilling. In addition, Haranga holds the Saraya Uranium Project, previously owned by Uranium giant Orano (previously Areva) and which has in excess of 65,000m of historical drilling and a defined mineral resource of 14.5Mt @ 550ppm eU3O8 for 17.6 Mlbs contained eU3O8 Indicated and Inferred.

Haranga's collective expertise includes considerable experience running ASX-listed companies and financing, operating and developing mining and exploration projects in Africa, Australia, and other parts of the world.

5.3	Bank overdrafts	-	-
5.4	Other (provide details)	-	-
5.5	**Cash and cash equivalents at end of quarter (should equal item 4.6 above) (*)**	**3,327**	**6,311**

6.	**Payments to related parties of the entity and their associates**	**Current quarter $A'000**
6.1	Aggregate amount of payments to related parties and their associates included in item 1	(97)
6.2	Aggregate amount of payments to related parties and their associates included in item 2	-

Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.

Payment for executive director salary relating, payment for non-executive director fees.

7.	**Financing facilities** *Note: the term "facility' includes all forms of financing arrangements available to the entity.* *Add notes as necessary for an understanding of the sources of finance available to the entity.*	**Total facility amount at quarter end $A'000**	**Amount drawn at quarter end $A'000**
7.1	Loan facilities	-	-
7.2	Credit standby arrangements	-	-
7.3	Other (unrelated party loan)	-	-
7.4	**Total financing facilities**	-	-

7.5	**Unused financing facilities available at quarter end**	-
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.	

For personal use only

8.	Estimated cash available for future operating activities	$A'000
8.1	Net cash from / (used in) operating activities (item 1.9)	(1,679)
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	-
8.3	Total relevant outgoings (item 8.1 + item 8.2)	(1,679)
8.4	Cash and cash equivalents at quarter end (item 4.6)	3,327
8.5	Unused finance facilities available at quarter end (item 7.5)	-
8.6	Total available funding (item 8.4 + item 8.5)	3,327
8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	1.98

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Yes

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Yes. The Company manages cash flow through regular budgeting and forecasting.

In addition, the Company has demonstrated its ability to secure funds when required and is confident that it will be able to continue to do so.

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Yes. There is sufficient cash available to continue meeting business objectives in the short-term.

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 30 October 2026

Authorised by: The Board of Haranga Resources Limited

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
